

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

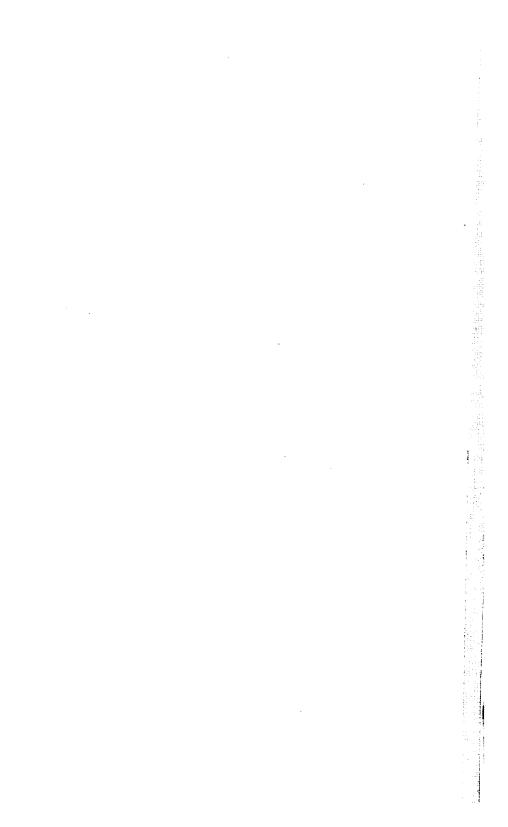

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. BOOK

CHAP. II.

History of Religion in Great Britain, from the death of king John, A. D. 1216, to the accession of Henry IV. A. D. 1399.

SECTION I.

History of Religion, from A. D. 1216, to A. D. 1300.

S the subjection of the kingdom of Eng. Cent.XIII. A land to the fee of Rome by king John, Changes was a very furprifing event, it was attended with very strange effects. In particular, it produced an instantaneous and total change in the to Rome. language and conduct of all parties concerned. The pope, who had poured out upon king John Vol. VIII. the

Cent.XIII.

the heaviest curses, as the worst of men, and the greatest enemy of God, now loaded him with blessings, as the best of princes, and the greatest favourite of heaven. King John, who had maintained a passionate opposition to the ambitious pretences of the pope, and threatened to pull down his power, now became the warmest advocate for those pretences, and took shelter behind the papal The English barons, who had affected to revere the dictates of the pope as the commands of God, and to dread his fulminations as the artillery of heaven, when they were pointed againstking John, treated them both with the most fovereign contempt, when they were turned against Such is the shameless versatility of themselves. unprincipled politicians!

The pope friendly to Henry III.

As the pope had been the zealous friend of king John in the last years of his reign, he warmly espoused the cause of his infant son Henry III. against his competitor prince Lewis. Henry, at his coronation, having fworn fealty to the pope as his fuperior lord, Gualo, the papal legate, renewed the fentence of excommunication against prince Lewis, and all his adherents. After the peace was concluded between Henry and Lewis, and this last prince had left the kingdom, the clergy and barons of his party were treated with great feverity by the pope, and constrained to pay great fums of money, for having dared to despise the thunders of the church of Rome?

¹ M. Paris, p. 292. Annal. Waverlien ad an. 1216. Concil. t. 1. p. 546. ² M. Paris, p. 299. Cardinal

Cardinal Langton held a fynod at Oxford A. D. Cent XIII. 1222, in which fifty canons were made, which Synod of contain little new or remarkable. By the twentyeighth canon, clergymen are prohibited to keep concubines publicly in their own houses, or to go to them in other places so openly as to occasion fcandal 3.

The court of Rome, whose thirst for money Papal prowas quite insatiable, formed a project about this time, which would have brought a prodictious mass of money into the papal coffers, if it had been accomplished. By this project, the revenues of two prebendaries in every cathedral, and of two monks in every monastery, in all the countries in communion with the church of Rome, were to have been granted to the pope, for the better fupport of his dignity. When this project was laid before the parliament of England, A. D. 1226, this cold evafive answer was returned to the papal legate: "That this affair concerned all Christendom; and they would conform to the resolutions " of other christian countries 4."

The death of cardinal Langton on the 9th of Richard July A. D. 1228, occasioned fresh disputes. The manner of filling up the highest dignity in the church of England, was in those times so unfettled, that every vacancy endangered the peace of the kingdom. The monks of Canterbury on this occasion made a hasty election of Walter de Hemesham, one of their own number; with

³ Wilkin, Concil. t. 1. p. 590.

⁴ Id. ibid. p. 620.

Cent.XIII

whom both the king and the bishops of the province being distaissied, all parties, as usual, appealed to Rome. His holiness was in no haste to determine this cause, which he affected to think very doubtful and dissicult, till the king, by his commissioners, made him a promise of a tenth of all the moveables, both of the clergy and laity of England. This made the case so clear, that he immediately declared Hemesham's election void; and, to prevent all further contests, by the plenitude of his own power he appointed Richard Le Grand, chancellor of Lincoln, to be archbishop.

A papal legate collects money.

The pope, who was bleffed with an infallible remembrance of the promises of the faithful, sent a legate into England to collect the tenths which the king had promiled. This demand met with great opposition in the English parliament, especially from the lay barons. But at length, by the united weight of the papal and regal power, all were obliged to submit; and this heavy tax was collected with great exactness. The legate, to shorten his own work, obliged the bishops to pay the tax for their inferior clergy; and when any of them complained they had not money, he prefented to them certain Italian usurers, which he had brought with him, who lent them money at an exorbitant interest?. Thus cruelly were our ancestors oppressed and sleeced by the venal and infatiable court of Rome!

⁵ M. Paris, p. 350.

⁷ M. Paris, p. 362.

⁶ T. Wykes, p. 41.

This archbishop, whose election had cost the Cent.XIII. nation fo dear, did not enjoy his dignity much Edmund above two years; but dying August 3, 1231, made way for new disturbances. The monks made four fuccessive elections, which were all voided by the pope, because the persons elected were not thought to be fufficiently attached to the interests of the court of Rome. At length, after two years vacancy, the pope recommended Edmund Rich treasurer of Salisbury; who was chosen and confecrated 8.

The pope had not only invaded the rights of the The Itacrown in filling the higher stations in the church, infulted. but had made equal encroachments on the rights of private patrons, and had got into his hands, by one means or other, the disposal of all the valuable livings in the kingdom, which he generally bestowed upon Italians. This abuse became so insupportable, that in the year 1232 a great number of perfons of confiderable rank formed an affociation to drive all these foreign ecclesiastics out of the kingdom. These affociates insulted the persons, and plundered the houses, of the Italian clergy: a thing fo agreeable to the whole nation, that they met with no opposition.

Cardinal Otho, one of those birds of ill omen, Constitutions of a legate from the pope, arrived in England A. D. 1237, where he continued about three years, receiving many valuable presents from the bishops, monasteries, and clergy. During this time, three

⁸ M. Paris, p. 385.

This legate held a council at London, 1237; in which a great number of canons were framed, which were called the Consti-These constitutions do not tutions of Otho 10. contain many things new or remarkable. fecond canon, the facraments are declared to be feven in number. The fifteenth is against the clandestine marriages of the clergy, and the fixteenth against their keeping concubines publicly; both which practices were still very frequent in This legate convened two other affem-England. blies of the clergy, with no other view but to make exorbitant demands of money 11.

Archbishop Boniface.

Edmund archbishop of Canterbury was so much chagrined at these grievous and incessant exactions of the court of Rome, which he could not prevent, that he left the kingdom, and retired to the monastery of Pontigniac in France, where he died, A. D. 1240 . Henry, by persuasions, promises, threats, and other means still more violent and unlawful, prevailed with the monks to chuse Boniface, the queen's uncle, to be archbishop, though he was not very well qualified for that office. The pope, by certain arguments which never failed of fuccess at Rome, was prevailed upon to confirm the ėlection 13.

Opposition of the

During the primacy of this prelate, feveral nun-English to cios and legates arrived in England, improving

upon one another in the arts of pillaging this un- Cent XIII. happy kingdom. The patience of the English was at last tired out; and the great barons, knowing tions of that there was no other way to fave the nation from being plundered, but by preventing the approach of these Romish harpies, sent orders, A. D. 1245, to the wardens of the fea-ports, to feize all persons bringing any bulls or mandates from Rome. was not long before a messenger was apprehended with a fresh cargo of bulls, directed to Martin, the legate in England, impowering him to exact more money from the clergy on various pretences. bulls being feized, the legate complained bitterly to the king of this daring infult; who commanded the bulls to be restored. The barons, in order to open the eyes of this deluded monarch, who assisted a foreign court in plundering his own subjects, laid before him an account of the incredible fums which went from England to Rome. Among other articles, it appeared that the church-preferments possessed by Italians in England amounted to sixty thousand marks per annum: a greater sum than the ordinary revenues of the crown. Henry was much furprifed at this account, he had not virtue and spirit to join with his people in putting a stop to those grievances. The barons, determining to go through with the work which they had begun, held another meeting at Dunstable, under pretence of a tournament. From this meeting they fent a bold knight to command the legate, in the name of the barons of England, immediately The knight executed his to leave the kingdom.

Cent XIII. commission with spirit, assuring Mr. Martin, that if he remained three days longer in England, he would infallibly be cut in pieces. The legate perceiving that it was no longer in the king's power to protect him from the fury of an injured nation, departed with all possible speed 14.

Application to the council of Lyons.

The barons, not contented with what they had done, resolved if possible to prevent the return of those oppressions which the kingdom had long suffered from the see of Rome. With this view, they fent very honourable ambassadors to lay the grievances of the church and kingdom of England before a general council, which was then fitting at Lyons, in which the pope prefided in person. letter which these ambassadors presented to the council from the barons of England, breathes a fpirit of independency and good fense hardly to be expected in that age. After a very full and free enumeration of the oppressions of the court of Rome, it concludes with these bold and resolute expressions: "We can no longer, with any patience, bear the foresaid oppressions; which, as they are " detestable to God and man, are intolerable to us; neither, by the grace of God, will we 46 any longer endure them 15." William Powerie, one of the ambassadors who presented this letter, made a spirited harangue to the council, in which he fet forth the innumerable frauds and infatiable avarice of the court of Rome in such strong colours, that his holiness was covered with shame, and a

4 M. Paris, p. 659,

15 Id. p. 666.

blush was seen on the face of infallibility. But this Cent. XIII. blush was all the satisfaction the English nation obtained from the pope and council, who put off the confideration of this affair fo long, that the ambassadors, seeing no prospect of redress, returned home in discontent 16.

The unnatural fit of modesty with which his Further holiness had been seized at the council of Lyons was not of long duration: for the very year after, court of we find his agents in England as violent as ever in their extortions: which occasioned fresh remonstrances, not only from the barons, but even from the king and clergy. The letters to the pope from the king and clergy, were humble and timid; but those from the barons were more bold. threatening, that if his holiness did not immediately redress their grievances, they would do themselves justice 17. But all these letters were treated with fcorn by the haughty pontiff, who became daily more imperious and tyrannical. He obliged the English prelates to subscribe the sentence of excommunication against the emperor Frederick II. and to furnish a certain number of armed men to fight against that prince, though he was brotherin-law to their own king 18. Not contented with all this, the court of Rome, in this same year 1246, demanded at once the half of all the revenues of the non-residing clergy, and the third of the revenues of those who resided. This demand being fo great, rendered the clergy unanimous in

16 M. Paris, p. 681. ²⁷ Id. p. 699, &c. 18 Id. p. 701.

their

Cent. XIII.

their opposition, in which they were supported by the king and barons. His holiness, finding he had gone a little too far, very prudently desisted 19.

Courage of the bishop of Lincoln.

While the pope was thus trampling upon the church and kingdom of England, a private prelate had the courage to oppose him; and which is more wonderful, to oppose him with success. This ecclefiastical hero was Robert Grosted bishop of Lincoln, a person of uncommon learning for the rage in which he lived; and of fuch unfeigned piety, untainted probity, and undaunted courage, as would have rendered him an ornament to any age. When this bishop received bulls from Rome, he examined them with great attention; and if he found that they commanded any thing contrary to the precepts of the gospel, and the interests of religion (which was very often the case), he tore them in pieces, instead of putting them in execution. Innocent IV. one of the most imperious pontiffs that ever filled the papal chair, fent this bishop a bull, which contained in it the scandalous clause of Non obstante, so much and so justly exclaimed against in that age; and besides, commanded him to bestow a considerable living in his gift upon the pope's nephew, who was an infant. The bishop was so far from complying with this bull, that he fent the pope a letter, in which he exposed the injustice and impiety of it, with the greatest freedom and severity. With regard to the

clause of Non obstante, lately introduced into the Cent. XIII. papal bulls, the good bishop used these expressions in his letter: " That it brings in a deluge of mis-" chief upon Christendom, and gives occasion to " a great deal of inconstancy and breach of faith; " it even shakes the very foundations of trust and "fecurity amongst mankind, and makes language " and letters almost infignificant," With respect to that part of the bull which required him to bestow a benefice upon an infant, he says,—" Next " to the fins of Lucifer and Antichrist, there can-" not be a greater defection, or which carries a " more direct opposition to the doctrine of our "Saviour and his apostles, than to destroy people's 46 fouls, by depriving them of the benefits of the of pastoral office; and yet those persons are guilty of this fin, who undertake the farcedotal func-66 tion, and receive the profits, without discharg-" ing the duty. From hence it is evident, that "those who bring such unqualified persons into "the church, and debauch the hierarchy, are " much to blame; and that their crimes rife in or proportion to the height of their station 20.39 These were strains of truth and freedom to which his holiness had not been accustomed. He fell into a furious passion, and swore by St. Peter and St. Paul, that he would utterly confound that old, impertinent, deaf, doting fellow, and make him a talk, and astonishment, and example to all the "What!" faid he, " is not the king of

66 England,

Cent. XIII.

" England, his master, our vassal, or rather our " flave? and will he not, at the least fign of ours, " cast him into prison?" When his holiness had a little spent his rage, the cardinals represented to him, " That the world began to discover the truth " of many things contained in the bishop's letter; " and that if he perfecuted a prelate so renowned for " piety, learning, and holiness of life, it might create the court of Rome a great many ene-They advifed him therefore to let the mies." matter pass, and make as if he had never seen this provoking letter 21. What honour is due to the memory of the noble Grosted, who made so bold a stand against the tyranny of the court of Rome, in an age when it trampled upon kings and emperors!

Synod of Merton. Boniface archbishop of Canterbury was of a very different spirit, and screwed up the power of the church to the greatest height. This appears from the canons of the provincial synod held at Merton in Surrey, A. D. 1258, by this prelate. The first canon forbids archbishops, bishops, and inferior clergy, to appear before civil courts to answer for any part of their conduct which had the most remote relation to church affairs; and threatens the judges, and even the king himself, with the highest censures of the church, if they insist on such appearance. The second relates to patronages; and the third is against the intrusion of clerks into benefices by a lay power. The

fourth '

²¹ Du Pin's Ch. Hist. vol. 11. p. 62. M. Paris, p. \$70, &c.

fourth makes such regulations concerning excommunication as rendered that fentence truly terrible. The fifth forbids laymen to imprison clergymen. In the fixth the church claims a right of judging concerning contracts between a clergyman and a The feventh afferts the right of the church to judge and punish Jews. The eighth provides for the perfect security of those criminals who had taken fanctuary in churches. The ninth. tenth, and eleventh, are defigned to prevent all invalions of every kind on the possessions of the church and clergy, which are declared facred and And the two last provide for the inviolable. church's peaceable enjoyment of all pious legacies and donations 22. In a word, the vifible tendency of all those canons was to emancipate the church and clergy from civil authority, and at the same time to wreath the yoke of ecclefiaftical tyranny still faster about the necks of the laity. wonder, therefore, that the laity were alarmed at these proceedings. The barons wrote a letter to the pope, complaining of those stretches of churchpower, and of the ignorance and immoralities of the clergy, and threatening to withdraw those ample revenues which had been bestowed upon the church by the piety of their ancestors, since they were so much abused. But they applied to a very wrong quarter for redress: his holiness answered coldly, that he did not suppose the clergy of England were more ignorant or immoral than they had

²² See Spelman, Lynwood, and Johnson's Councils.

Cent. XIII.

been in former ages; and that it was utterly impossible to withdraw any part of the revenues of the church; for whatever was once dedicated to the service of God was irrevocable 23.

Synod of Lambeth.

The archbistion, secure of the protection of the Holy See, was so far from retracting any thing he had done, that he held another provincial fynod A. D. 1261, at Lambeth, in which the constitutions of Merton were confirmed and enlarged. The fecond of these additional canons complains bitterly of the fecular powers, for fometimes preventing prelates from inflicting pecuniary and corporal punishments on delinquents; and denounces the heaviest censures on those disturbers of church-By another of these canons, every bishop is commanded to have one or two prisons in his diocese, for the confinement of clerks convicted of capital crimes; "for," fays the canon, " if any clerk be so incorrigibly wicked, that he " must have suffered capital punishment if he had " been a layman, we adjudge fuch an one to perer petual imprisonment." So shameless were the clergy of those times, not only in their practices, but in their very laws 24!

Exactions of the poper

Though we have said nothing for some time of the exactions of the court of Rome, we must not imagine that these exactions had ceased. On the contrary, they went on more briskly than ever. The satal present of the crown of Sicily, which the

²³ Annal. Burton, p. 388. Wilkin, Concil. t. 1. p. 736-740.

²⁴ Johnson's Canons, ann. 1261.

pope made to prince Edmund, A. D. 1254, furnished his holiness with an excellent handle for draining England of its wealth, for several years; in which space he is said to have drawn from this kingdom about nine hundred and sifty thousand marks: an immense sum, equal in value and efficacy to twelve millions sterling of our money at present! It is true, indeed, that during the heat of the civil wars, especially when the barons had the ascendant, the pope did not receive so much English money as usual, but he took great pains to get as much of it as possible.

After the restoration of the royal authority by the victory of Evesham, the pope sent his legate Othobon into England, to congratulate Henry on that happy event, and to manage the affairs of the court of Rome. This legate, observing how matters went, very charitably excommunicated the late earl of Leicester, and all his party, whether dead or alive 25. The fame legate held a national council, A. D. 1268, at St. Paul's in London 26. In this council a great number of canons were made, much the same in substance with those of the former council of London, 1237, under the legate Otho. Very severe canons were framed in this council against pluralities, commendams, nonresidence, and the clergy's accepting of civil offices; but these canons made little or no reformation in any of these respects, being chiefly de-

Cent. XIII.

figned to increase the power and revenues of the pope, by granting dispensations. This was the last council held in England in the reign of Henry III. who died on the 16th of November 1272²⁷.

Kilwarby primate.

Boniface archbishop of Canterbury did not long furvive his great friend and patron king Henry; and his death occasioned fresh disputes about the election of a fucceffor. The monks of Christchurch made choice of their sub-prior William Chillenden; but the pope refused to confirm his election, and by his own power nominated Robert Kilwarby, a black friar, to be archbishop 28. King Edward was not yet returned from the Holy Land; and the guardians of the kingdom, not willing to come to a rupture with his holiness in the absence of their fovereign, acquiesced in this nomination. But that the rights of the crown might not fuffer by their filence, they made a folemn protestation against this act of the pope, as an encroachment on the royal prerogative, and infifted that it should not be drawn into precedent; and Barnard, the king's resident at the court of Rome, made a protestation in his master's name to the same effect. The monks of Canterbury, too, in order to preferve their own rights, proceeded to an election, and made choice of Kilwarby. From hence it appears, that though the kings and clergy of England often submitted to these papal encroachments. they never lost fight of their own undoubted rights.

7 M. Westmonst. p. 401.

²⁸ Anglia Sacra, t. 1. p. 116.

In the year 1274, the pope held a general coun- Cent.XIII. cil at Lyons, for the reformation of church-discipline, and the relief of the Holy Land ". For this last purpose, the pope and council imposed a tax on all the clergy of a tenth of their revenues, for fix years. This tax was collected in England, as well as in other countries of Christendom.

Council of

Oppref-

As the power of the pope and the church appear to have been at their greatest height in England the popular about this time, it may not be improper to take a fhort view of this prodigious fabric of ecclefialtical tyranny, and of the deplorable oppressions under which our ancestors groaned in this superstitious age. Some of those oppressions are not ill expressed in that letter of complaint which was written to the pope by the king, the prelates, and the barons of England, A. D. 1246. In that letter they complain, 1. That the pope, not content with the annual payment of Peter-pence, exacted from the clergy great contributions, without the king's confent, and against the customs, rights, and liberties of the realm of England. 2. That the patrons of churches could not present fit perfons to the vacant livings, the pope conferring them generally on Italians, who understood not the English language, and carried out of the kingdom the money arising from their benefices. the pope oppressed the churches, by exacting penfions from them. 4. That Italians succeeded Italians, contrary to the decree of the council of

29 Du Pin's Chur, Hift. vol. 11. p. 192.

Cent.XIII. Lyons; and that these Italians were invested in their livings without trouble or charges; whereas the English were obliged to prosecute their rights at Rome at a great expence. 5. That in the churches filled by Italians, there were neither alms nor hospitality; neither was there any preaching; and the care of fouls was entirely neglected. That the clause of non obstante, generally inserted in the pope's bulls, absolutely destroyed all laws, customs, statutes, and privileges, of the church and kingdom 10. To these were added many other grievances no less oppressive and intolerable; such as,—the pope's filling the highest dignities of the church by his own power, and making the archbishops and others pay exorbitant sums for their preferments;—his drawing all causes of any importance to Rome, and keeping the parties long waiting for their determination, at a great expence;—if we add to all these the great sums that went annually to Rome, for pardons, indulgences, dispensations, &c. &c. &c. we shall be surprised that the kingdom was not drained of all its wealth.

Encroach ments of theEnglish clergy.

Besides all these oppressions and exactions of the court of Rome, the clergy at home claimed many privileges which were quite inconfistent with the peace and prosperity of the kingdom; such as an exemption from all civil authority and jurisdiction, by which they were at liberty to commit the greatest crimes almost with impunity.

30 M. Paris, p. 699. An. Burton, p. 307.

fiastical courts encroached greatly on the jurisdic- Cent.X!!Ition of the civil courts, and claimed the fole right to judge all causes relating to tithes, marriages, testaments, and many other things, under a pretence that they had fome connection with spi-The possessions of the clergy too, never rituals. diminishing, but daily increasing, were now swelled to an enormous bulk, and threatened to swallow up the whole lands of the kingdom. These things. cried aloud for reformation, and the great prince who was now upon the throne made fome amendments in a few particulars.

One of the statutes of Westminster 1275, set Remedies. fome bounds to the immunities of the clergy, by enacting, that when a clerk was indicted in the king's court for any felony, he should not be delivered to his ordinary, until he had undergone an inquest and trial by lawful men 34. By the famous statute of mortmain, A. D. 1279, a stop was put to the further increase of the possessions of the church, which were already far too great. For by that statute it was enacted, "That from henceof forth none shall either give, sell, bequeath, or change, or by any other title whatsoever assign. any lands, tenements, or rents, to any religious 66 body, without licence from the king had for that " purpole 22."

In the year 1278, Robert Kilwarby archbishop Peckham of Canterbury, being promoted to be cardinal of primate.

³¹ Coke's Inst. part 2. p. 156.

Book IV.

Cent XIII. Oporto by the pope, refigned his fee, and went to Rome. His holiness, after rejecting Robert Burnell bishop of Bath and Wells, who was elected by the monks of Canterbury, nominated John Peckham, a Franciscan friar, to that high dignity, who is faid to have paid a good fum for his nomination **. Peckham, being confecrated by the pope, came over to England, and was peaceably received by Edward, who did not think fit at this time to engage in a quarrel with the court of Rome.

Synod of Reading.

This primate held a provincial fynod at Reading, in August 1279; in which the constitutions of Ottobon were confirmed, and feveral canons were made,—about the collation to benefices;—defcribing the persons against whom the sentence of excommunication was to be annually denounced, -against the clergy keeping concubines,-about baptism,—and about the government of monks and nuns 34. But some of these canons concerning excommunication were fo difagreeable to the king and parliament, that the venerable father John archbishop of Canterbury was obliged to appear before the king in his parliament at Michaelmas the fame year, and there had the mortification to fee fome of the articles of his late canons blotted out, and others changed; and was made to declare his affent to these alterations. This was a very bold effort (confidering the times) of the civil power against ecclefiastical tyranny, and a proper prelude to the

³³ Du Pin, vol. 11. p. 75. 34 Spelman Concil. t. 2. p. 320. statute

statute of mortmain, which was enacted by the Cent.XIII. same parliament.

The same primate held another council of his clergy at Lambeth, A.D. 1281, in which several The most remarkable of these canons were made. was the first, which related to the administration of the eucharist. Amongst other things it is decreed, that at the elevation of the host the bells shall ring, and all that hear them, even out of church, shall fall down on their knees. The fame canon contains also directions to the priests, what instructions they ought to give the people about this facrament 35. One of these instructions is so fingular, that it well deserves a place here: "Let " priests also take care, when they give holy com-" munion at Easter, or at any other time to the " simple, diligently to instruct them, that the 66 body and blood of our Lord is given them at once under the species of bread; nay, the very " living and true Christ, who is entirely under this " species in the sacrament. And let them also " instruct them, that what is at the same time er given them to drink, is not the facrament, but " mere wine, to be drank for the more easy swal-" lowing of the facrament which they have " taken 36." These wise instructions were plainly intended to prepare the poor laics for what foon after happened, the depriving them of the cup entirely, and leaving them to swallow their dry bread in the best manner they could.

The

³⁵ Du Pin's Ch. Hist. vol. 11. p. 131. Johnson's Canons, an. 36 Spelman's Con. v. 2. p. 329. 1181.

Primate's letter to the king.

The inclination which Edward and the parliament had lately discovered, to set some bounds to the increasing power and wealth of the clergy, was by no means agreeable to the archbishop; who, in the year 1281, wrote a very sharp letter to the king on that subject 37. In that letter he complains, that the church was oppressed, contrary to the decrees of the popes, the canons of councils, and the fanction of orthodox fathers: "in which," fays he, "there is the supreme authority, the su-" preme truth, the supreme sanctity; and no end " can be put to disputes, unless we can submit " our folemnity to these three great laws." this epistle the primate roundly declares, that no oaths shall bind him to do any thing against the interests and liberties of the church; and very kindly offers "to absolve the king from any oath " he may have taken that can anywife incite him " against the church." But this thundering letter made no impression on king Edward, who continued to take feveral other steps towards abridging the exorbitant power and wealth of the clergy.

New herefy. Archbishop Peckham took occasion, A. D. 1286, to display his orthodoxy, and skill in scholastic divinity, by censuring several propositions maintained by one Richard Knapwell, a Dominican friar; the only heretic we hear of in England in the thirteenth century. These propositions maintained by the friar, and condemned by the primate,

³⁷ Du Pin's Ch. Hist. vol. 11. p. 131. Spelman Concil. t. 2. p. 341.

are so far curious, as they shew us what were the Cont.XIII. subjects of controversy and disquisition amongst the divines and philosophers of this period, and were as follows: "I. That the dead body of 46 Jesus Christ had not the same substantial form es as when living. 2. That if the eucharistical bread had been confecrated with these words, 66 This is my body, during the three days Jesus " Christ lay in his grave, the bread would have been transubstantiated into the new form which " the body of Christ took at the separation of his " foul. 3. That after the resurrection of Jesus 66 Christ, the eucharistical bread is transubstan-" tiated by virtue of these words, This is my body, " into the whole living body of Christ; that is, the matter of the bread is converted into the 66 matter of his body, and the substantial form of the bread into the substantial form of his body; that is to fay, into his intellectual foul, fo far as " it constitutes the form of his body. 4. That in man there is only one form, namely, his ra-"tional foul, without any other fubstantial form. 5. That in articles of faith, a man is not bound " to rest on the authority of the pope, or of any " priest or doctor; but that the holy scriptures, " and right reason, are the only foundations of " our affent "." One cannot help wondering how fo important a truth as that which is contained in the last proposition, ever came into company with

³⁶ T. Wykes, p. 114. Knyghton, col. 2467. Spel. Con. vol. 2. P. 347.

Cent.XHI.

the vile jargon and nonsense of all the rest. This last proposition, however, was no doubt considered by the primate as the greatest and most dangerous heresy of the whole.

The king extorts money from the ciergy.

Archbishop Peckham dying A. D. 1292, was fucceeded, after a vacancy of two years, by Robert Winchelfey, who fat very uneafy in the archiepiscopal chair. King Edward being much engaged in war, had great occasion for money, and made frequent demands upon the clergy, which were confidered by them as grievous encroachments on the immunities of the church. These demands of money became more frequent and more heavy during the primacy of Winchelfey, on account of the long and expensive war with Scot-In the year 1294, while the archbishopelect was still at Rome, Edward seized all the money which had been collected in England, for the holy war, and was deposited in several monasteries, and applied it to his own use 39. A few months after this, he called an affembly of the clergy to meet at Westminster on the 21st September in the same year, and demanded from them one half of all their revenues, both spiritual and temporal 40 This demand, as might have been expected, was not very cheerfully complied with; and they obtained an audience of the king, in order to persuade him to accept of a more moderate proportion. But William Montfort dean

²⁰ T. Wykes, p. 126. Walfing. p. 65.

[№] M. Weft. p. 421, 423.

of St. Paul's whom they had appointed their Cent.XIII. orator, was thrown into fo violent an agitation of spirits, probably by the royal frowns, soon after he had began his harangue, that he funk to the ground, and expired upon the spot. When the clergy, after this fatal accident, had returned to the monks hall at Westminster, their deliberations were interrupted by the intrusion of fir John Havering, fent by the king; who, with a fierce menacing air, addressed the assembly in this laconic speech: "Reverend fathers, if any of you dare 66 to contradict the king's demand in this business, et let him stand forth into the midst of this af-" fembly, that his person may be known, and " taken notice of, as a breaker of the peace of " the kingdom." None of the clergy had courage to return any answer to this speech, or make any further opposition to the king's demand.

The archbishop hearing what havock Edward Theclergy was making of the revenues of the church, obtained a bull from Boniface VIII. one of the king and greatest champions for the power, wealth, and immunities of the clergy, that ever filled the papal chair, prohibiting all princes to levy any taxes on the clergy in their dominions, without the leave of the holy see, and forbidding the clergy to pay any fuch taxes; and threatening both princes and clergy with the dreadful sentence of excommunication in case of disobedience 41. Winchelsey, armed with this impenetrable shield (as he imagined) against

⁴¹ Rymer, vol. 2. p. 706. Heming. vol. 1. p. 104.

Cent XIII.

all future attempts on the facred patrimony of the church, returned into England; and foon had occation to try its strength and efficacy. For Edward held a parliament at St. Edmundsbury, on November 3, A. D. 12964, in which he demanded from the clergy a fifth of all their moveables. They refused to comply with this demand; and the archbishop produced the pope's bull, which he had hitherto kept fecret, as the ground of their Though the king was greatly offended at this refusal, and still more at the pretence on which it was built, he did not immediately proceed to extremities, but gave them to the next meeting of parliament to confider of the matter. At the meeting of the next parliament, 15th January 1297, the clergy still persisted in refusing to comply with the king's demand 44.

The clergy obliged to fubmit.

Edward, perceiving that this dispute was come to a criss, and that he must now establish the right of king and parliament to tax the possessions of the clergy without the consent of the pope, or for ever give it up, determined to carry his point. With this view he told the clergy, that since they would contribute nothing to the support of his government, they should receive no protection from it; and he gave orders to all his judges to do every man justice against the clergy, but to do them justice against no man. At the same time he directed writs to all the sheriss in England,

⁴² Walfing. p. 68.

⁴³ Heming. vol. 1. p. 107.

⁴⁴ Walfing. p. 68.

Ch. 2. § 1.

commanding them "to feize all the lay fees of CentXIII. the clergy, as well fecular as regular, together es with their goods and chattels, and keep them in their possession, until they received further orders from him." These two things brought fuch a torrent of abuses, injuries, and distresses, on the clergy, that many of them very foon complied with the king's demand, and obtained the protection of the government, and restitution of their estates and goods. At last, even the archbishop himself, the chief author of all this disturbance, after he had been flripped of all, and almost reduced to want the necessaries of life, was brought to submission, and paid the fifth part of his moveables to redeem the rest of his possessions 45. did this great king, by his wife and steady meafures, triumph over the covetous and felfish claims of the pope and clergy, when their power was at the highest.

While this great controverfy between the king and the clergy subsisted, the primate held a provincial synod at London in January 1298, in which it was decreed, "That the seizers of eccle-" fiastical goods, and such as took them away by "violence, without the free leave of their owners, or of their bailists, be publicly and in general denounced to be under the sentence of the greater excommunication, by the bishops themselves in the cathedral churches and other noset table places, by other idoneous men, in other

Synod of London.

" churches

28

Cent.XIII. " churches of every diocese, at the command of "the diocesan "." But the whole body of the clergy being immediately after this put out of the protection of the law, and exposed to all manner of infults, these excommunications were either not denounced, or not regarded. After this storm was blown over, and the archbishop had recovered the possession of his see, he sent a solemn mandate to all the bishops of his province, dated at Otteford 6th ides of July 1298, enjoining and commanding them, by virtue of their canonical obedience. 1. To cause the sentence of excommunication to be published in every church in each of their dioceses, against all seizers of the goods of ecclefiaftical men, according to the decree of the fynod 2. To cause the same sentence to of London. be published in each of their cathedral churches, twice a-year, against all infringers of the great charter, and the charter of forests (which had been lately renewed by the king), and to cause the faid charters to be at the fame time publicly 3. To cause the same read before the people. fentence of the greater excommunication to be published in every church in each of their dioceses. every Lord's day, and every festival, against all who should be guilty of beating or imprisoning clergymen. All these excommunications were to be pronounced with the greatest possible folemnity, with bells tolling and candles lighted, that it may cause the greater dread; "for laymen (says

^{. 46} Johnson's Canons, an. 1298.

the primate) have greater regard to this for Cent.XI lemnity than to the effect of fuch sentences 47."

Archbishop Winchelsey held a provincial synod of at Merton, A. D. 1305, in which several canons were made, relating to the payment of tithes, the duty of stipendiary or mass-priests, and some other things of no great importance. The fourth canon of this fynod may perhaps be thought curious, as it contains a very full and distinct detail of the feveral books, vestments, and utenfils which were used in the celebration of divine service, in this period, together with the other furniture and ornaments of their churches. The defign of the canon was to put an end to all disputes between the rectors of churches and their parishioners, by ascertaining what part of the books, vestments, utenfils, furniture, and ornaments of the church each of them was to provide and keep in repair. By this constitution the parishioners were obliged to provide the following books for their church, viz. A Legend or Lectionary, a book containing all the leffons, out of scripture, and other books, which were to be read throughout the year; 2. An Antiphonar, a book containing all the invitatories, responses, verses, collects, and every thing that was faid or fung in the quire, except the lessons; 3. A Grail, a book containing the tracts, fequences, hallelujahs, the creed, offertory, trifagium, &c. and the office for sprinkling the holy water, and all that was to be fung at high mass;

Cent.XIV. 4. A Pfalter; 5. A Troper, which contained only the sequences which were not in the Grail; 6. The Ordinal, a book containing directions for the right method of performing all the divine offices; this book was fometimes called the Pie or Portuis; 7. A Missal or Mass-book; 8. A Manual, a book containing the offices of baptism, and the other facraments, except the mass, with the service used It must have been a great exat processions. pence to parishes to provide all these books before the invention of printing, when the common price of a mass-book was five marks, equal to the yearly stipend of some vicars at that time. fides these books, the parishioners were obliged to provide the following vestments, viz. 1. The principal vestment, or best cope, to be used on the greater festivals; 2. A chesible, being the garment worn by the priest next under the cope, and which was fometimes called the planet; 3. A dalmatic, the garment used by the deacon; 4. A tunic, for the sub-deacon; 5. A choraal cope, for common use, with its appendages, viz. the alb, amyt, stole, maniple, and girdle; 6. Three furplices, and one rochet, or surplice without sleeves; 7. A frontal or covering for the great altar, and three or four towels. The parishioners were further obliged to provide the following facred utenfils; 1. A chalice or cup for the wine, with a patin or cover, both of filver; 2. A pyx or box for the body of Christ. of ivory or filver; 3. A cenfer; 4. A cross for processions, and another cross for the dead to be used in the burial office; 5. A baptismal font, with

lock and key; 6. A vessel for the holy water; 7. A great candlestick for the taper at Easter; 8. A lanthorn and hand-bell, to be carried before the body of Christ in the visitation of the sick: 9. An osculatory, or board with the picture of Christ or the Virgin Mary painted on it, which the priest kissed immediately after consecrating the host, and then handed about to the congregation to kiss; 10. All the images in the church, and the chief image in the chancel. The parishioners were obliged also to build and keep in repair the body of the church, the glass windows, and to furnish it with bells, and several other things. All this must have been attended with a very great expence, as feveral of these articles were costly. both in their materials and workmanship. rectors were obliged to keep the chancel, with its desks, &c. in repair 48.

The holding the fynod of Merton was amongst Troubles the last public acts of archbishop Winchelsey, in matethe reign of Edward I. he being foon after involved in very grievous troubles. For though the king and the primate had been outwardly reconciled to one another several years ago, yet that reconciliation never was fincere. The primate still continued to defend the immunities of the clergy with much zeal, and warmly joined with that party of the barons who opposed Edward's arbitrary measures, and obliged him frequently to confirm. the great charter, against his inclination.

⁴⁸ Spel. Conc. vol. 2. p. 431. Johnson's Canons, A. D. 1305. king

Cent.XIV. king was greatly enraged at this behaviour of the archbishop, and only waited a favourable opportunity to make him feel the weight of his refentment. Such an opportunity now offered. high constable, and earl marshal, the two heads of that party to which the primate had constantly adhered, had lately been deprived of their offices, and obliged to throw themselves on the king's mercy. Boniface VIII. the great friend and protector of Winchelsey, was now dead, and the papal chair was filled by Clement V. who having been born in Edward's French dominions, was much disposed to favour his native sovereign. The king accused the archbishop before the pope of various crimes, particularly of disturbing the peace of the kingdom by abetting the factious barons; and his holiness suspended him from the execution of his office, deprived him of the temporalities of his fee, and cited him to appear at Rome 49; where he continued in indigence and difgrace, till after the king's death, when he was recalled by Edward II. and restored to his dignities and posfessions.

Checks to the exactions of the clergy.

Edward I. in the absence of the primate, endeagiven by parliament voured to reform feveral ecclesiastical abuses in his last parliament, which met at Carlisle 21st January 1307. The superiors of several religious orders, who lived beyond feas, used frequently to come into England, on pretence of vifiting the monasteries of their order; from whence they

49 Walfing. p. 91. W. Thorn. col. 2003.

extorted

extorted great fums of money, which they carried Cent. XIV. out of the kingdom. To prevent this practice, a flatute was made, prohibiting the exportation of the goods of religious houses on any pretence whatfoever 5°.

The court of Rome, ever fertile in expedients Provide for obtaining power and wealth, had lately invented a new method of getting the disposal of all ecclefiastical benefices and preferments. This was by giving reversionary grants of benefices before they became vacant; by which the legal patrons were deprived of their right of presentation. These grants were called provisions, because thereby fuccessors were provided to incumbents while they were yet living. The pope had also, about this time, laid claim to the first-fruits of all vacant bishoprics, which had formerly belonged to the king. The parliament made loud complaints against these, and several other schemes, which the court of Rome had lately fet on foot to drain the kingdom of money. In order to obtain a redress of these new grievances, the parliament drew up a list of them, which they fent to the pope, accompanied with a very spirited letter. This list of grievances confifted of feven articles; which were as follows:

1. The extravagant number of provisions granted Lift of by the pope, of the best spiritual preferments, to ances. Italians, or other foreigners, and non-residents, to the great prejudice of the founders, benefactors,

5º Coke's 2d Inst. p. 580. Ryley's Placit. Parl. p. 312.

Cent. XIV.

and their successors, and to such as had the right of advowson, and the gifts of such preferments.

- 2. The rents and revenues of religious houses, which the pope intended to apply to the use of divers cardinals.
- 3. Concerning first-fruits of vacant benefices reserved to the pope, a thing never heard of before; concerning the collection whereof, he had lately issued forth divers hard and severe orders, much prejudicial to the king, kingdom, and the whole English church.
- 4. About Peter-pence; that it was not taken according to the first grant, but exacted to treble the value.
- 5. Concerning legacies given to pious uses; that they were wickedly demanded, and exacted by the authority of the apostolic see, and converted to other uses than the testator or donor intended.
- 6. Concerning debts; that creditors went to the pope's clerks, and offered them half the debt, more or less, to get the rest; who presently caused the debtors to be summoned, or distrained, to answer before them.
- 7. Concerning indistinct legacies; though approved by the civil or common law, yet the pope's clerks impiously appropriated them to themselves, contrary to the design of the deceased '...

William Testa, the pope's nuncio, was called before the parliament, sharply reprimanded for these new acts of extortion, and commanded to

⁵¹ Ryley's Placit. Parl. p. 380. M. West. p. 457.

defift from them; and his inferior agents were Cent.XIV. . ordered to be profecuted with the utmost severity. This noble spirit of the English parliament gave a momentary check to the cruel exactions of the court of Rome; but brought no effectual remedy, as will appear from the sequel of this history.

There were but few innovations in the doctrine Innovaof the church of England in this period; the minds this of the clergy being much more keenly engaged in period. the pursuits of power and wealth, than in speculative disquisitions. There happened, however, a considerable change in the fentiments of the church in the point of transubstantiation in the course of the thirteenth century. In the beginning of this century, the doctrine of the church on this subject, as declared by the fourth general Lateran council, was, That the bread was transubstantiated into the 66 body of Jesus Christ, and the wine into his blood 22." But before the end of the century, the faithful were taught to believe, "That both " the body and blood of our Lord, nay the whole ce living and true Christ, was given them at once. " under the species of bread; and that the wine which was given them at the same time to drink " was not the facrament, but mere wine 53." There were not a few changes in the worship and discipline of the church in this period. The number of festivals was considerably increased; bells were tolled at the elevation of the hoft, to engage

P Du Pin; vol. 11. p. 96. 53 Spel. Conc. vol. 2. p. 320. . church.

the adoration even of those who were without the

Cent. XIV.

church 54. In partaking of the eucharist, sometimes a cup of wine was given to the laity, though it was declared to be no part of the facrament; at other times they were put off with the washings of the priest's fingers 15. Confession was more strictly and more generally enjoined than formerly; and none were permitted to communicate who did not give evidence of their having confessed 56. What were called ipso facto or ipso jure suspensions and deprivations (by which those priests who were guilty of certain irregularities and vices were declared to be fuspended from their offices, or deprived of their benefices) came first into use in this period. The first example we meet with of suspensions and deprivations of this kind, is in the Constitutions of Otho, the pope's legate, in the fynod of London, A. D. 1237. By the 15th of these constitutions it is decreed, That all married priests be ipso jure deprived of their benefices; that all their goods, even those which they had gotten with their wives, be applied to the use of the church; and that their children be incapable of church-preferments 67. But this was an obstinate plague (as they called it), which for feveral centuries baffled all the power and cunning of the court of Rome, and required extraordinary methods to drive it out of the church. General excommunications came also into use in this century, by which all who were guilty of certain vices and crimes, though known only to

⁵⁵ Johnson's Can. A.D. 1236-21.
56 Id. ibid. vol. 2. A. D. 1228-1.
57 Id. ibid. A.D. 1237-15.

God and their own consciences, were declared to Cent. XIV. be excommunicated. These general excommunications were at first denounced chiefly against such as injured the clergy, by detaining their tithes, defrauding them of any of their dues, or stealing any thing belonging to the church. They were to · be published by every parish-priest in his holy vestments, with bells tolling and candles lighted, before the whole congregation, in the mothertongue, on Christmas, Easter, Pentecost, and Allhallows-day ... That these excommunications might make the greater impression on tender consciences or timorous natures, they contained the most horrible infernal curses that could be devised: 45 Let- them be accurfed eating and drinking; 44 walking and fitting; speaking and holding their es peace; waking and fleeping; rowing and riding; laughing and weeping; in house and in "field; on water and on land, in all places. Cursed by their head and their thoughts; their eyes and their ears; their tongues and their so lips; their teeth and their throats; their " shoulders and their breasts; their feet and their 46 legs; their thighs and their inwards. Let them " remain accurred from the bottom of the foot to 66 the crown of the head, unless they bethink 46 themselves, and come to satisfaction. And just " as this candle is deprived of its present light, for " let them be deprived of their fouls in hell "."

s Wanly's Catalogue.

Qent. KIV.

Such was the bitter unchristian language of the excommunications of those times!

Exactions of the court of Rome.

But that which is most worthy of our attention, or rather of our indignation, in the church-history of this period, is, the unsatiable avarice, boundless ambition, of the court of Rome. arts of that court to drain this unhappy kingdom of its treasure, and fleece both the clergy and laity, were almost innumerable. What prodigious sums of money were yearly carried out of England to Rome,—by pilgrims;—by those who prosecuted appeals, and law-fuits, before that court; -by prelates who went thither to obtain confectation, and the confirmation of their elections; -by fuch as went to folicit, or perhaps to purchase, churchpreferments, which were almost all bestowed by the pope;—by the legates and nuncios who from time to time carried off incredible sums, raised on various pretences; -by the Italians, who possessed many of the richest benefices in England; -by the first-fruits of benefices; -- by Peter-pence; -- by the annual tribute imposed upon king John and his fuccessors, and by several other means!

Pride of the popes. The popes, who hypocritically styled themselves, the servants of the servants of the Lord, pretended to be the universal monarchs of the Christian world, both in temporals and spirituals, and treated, not only the kings of England, but all the other sovereigns of Europe, as their vassals and subjects. Boniface VIII. who slourished towards the end of this period, carried these ambitious pretences to the greatest height, as appears from his samous bull, directed

directed to Philip the Fair, king of France, dated Cent. XIV. 5th December 1301: "Boniface the bishop, a fervant of the fervants of God, to Philip king of France. Fear God, and keep his commandments. We will you to know, that you er are subject to us, both in spirituals and temorals. You have no right to bestow benefices and prebends, &c. &c. We declare them heretics who believe the contrary "." It will be difficult to find in history such an example of insolent humility.

Though this kingdom, and other parts of New Christendom, already swarmed with monks and monks, nuns of various orders, feveral new orders were instituted abroad in this period, and soon after their institution transplanted into England. The most considerable of these new orders were the Francisans and Dominicans. The Franciscan order was founded about the beginning of the thirteenth century by Francis of Assis, from whom they took their name. They were first introduced into England A. D. 1216, and foon became famous for their pretended fanctity and real wealth. The Dominican order was founded about the year 1215, by Dominic de Gusman, one of those cruel enthusiasts who preached up the croifade against the Albigenses, by which such multitudes of unhappy people were destroyed, for no other crime than rejecting the tyranny, idolatry, and fuperstitions, of the church of Rome. The

60 Du Pin, vol. 12. p. 5.

Cent. XIV.

Dominicans were first established at Thoulouse, which was the centre of those pretended heretics they were designed to destroy; and from thence they soon spread over all Christendom; and settled in England A. D. 1217⁶¹. This order hath long inherited the spirit of its sounder, having the direction of the infernal tribunal of the inquisition, by which so many thousands of good men have been condemned to the slames.

SECTION II.

History of Religion in Great Britain, from A. D. 1307, to A. D. 1399.

Ambition of the pope.

THE conduct of the bishops of Rome never corresponded very well with the humble title which they assumed, viz. The servants of the servants of the Lord. But, in the dark ages we are now delineating, they acted much more like the sovereigns than the servants of the Christian world, and treated the greatest monarchs as their subjects. In the sirst year of the sourteenth century, Boniface VIII. declared, in a bull directed to the king of France,—"That God had established the pope fovereign over all kings and kingdoms, to pluck up, to destroy, to scatter, or to build;—that the king of France ought not to think that he hath no superior, and is not subject to the

⁶¹ Du Pin, vol. 12. p. 157.

56 pope;—that he who is of that opinion is a fool Cent. XIV. " and an infidel "."

Nor was the avarice of the popes of those times Their inferior to their ambition; and while they insulted avarice. all the fovereigns who were in communion with them, they plundered their subjects, without measure and without mercy. In a word, the pride and rapacity to those pretended vicars of the humble Jesus, were so great, that they could hardly be endured by the most infatuating superstition, and excited loud complaints in every Christian country.

In a parliament held at Carlisse in January A. D. 1307, great complaints were made of the tyranny and rapacity of the pope,—in bestowing many of the best benefices in the kingdom by provisoes on Italians and other foreigners, to the prejudice of the kingdom and of the lawful patrons; -in granting pensions to cardinals out of the revenues of religious houses; -in demanding the first-fruits of vacant benefices, which was a new demand, and very prejudicial to the king and kingdom; -in raifing the rate of Peter-pence much higher than the original grant;—in feizing legacies which had been given to pious uses, &c. An act was made in consequence of these complaints, prohibiting all these encroachments and extortions for the future?. But this act was ill executed, and had little or no effect.

Act of paragainst the exactions of Rome.

Primate recalled.

Robert Winchelsey archbishop of Canterbury, who had been several years in exile, was recalled by Edward II. immediately after his accession³. But that unfortunate prelate soon lost the favour of the young king, by resusing to dispense with the canons against pluralities and non-residence, in favour of the royal chaplains and court-clergy⁴.

Knightstemplars profecuted.

The profecution of the knights-templars, which terminated in the dissolution of the order, and the execution of many of its members, engaged the attention of all the nations of Europe, for several years, in the beginning of the fourteenth century. This order, at its institution A.D. 1118, confifted only of nine knights, who had their refidence in a house near the Temple (from which they obtained the name of the knights-templars), and engaged in the protection of the Christian pilgrims who visited Jerusalem. Many of these pilgrims being princes, prelates, barons, and perfons of great wealth, they were very liberal to their protectors; and the knights-templars, by degrees, became numerous and opulent, having many valuable estates in every Christian country. Their prosperity corrupted their manners, created them many enemies, and at length brought on their ruin. Two knights, who had been feverely punished for their crimes, publicly charged the whole order with the most detestable enormities. They affirmed particularly,-1. That every knight, at his admission into the order, was obliged to ab-

³ Wilkin, Concil. t. 2. p. 290.

⁴ Antiq. Britan. p. 209.

jure Jesus Christ, to spit upon the crucifix, and to Cent. XIV. trample it under his feet:-2. That they discharged him from all intercourse with women; but allowed him to commit the fin of Sodom:-2. That they compelled him to worship a wooden head, with a long beard, which was adored by the whole order, in their general affemblies. strange discovery made a mighty noise, and was very agreeable to the enemies of the order. the Fair, king of France, was the most dangerous, because he was the most powerful, of their enemies. That prince commanded all the templars in his dominions to be seized in one day (October 5. A, D, 1307), and thrown into prison 5.

Though Clement V. who filled St. Peter's chair Synod of at that time, seemed, at first, to be displeased with the proceedings of the king of France against the Templars, he was foon prevailed upon, by the prospect of sharing in their spoils, to imitate his example, and to animate both princes and prelates against them, by his bulls. In consequence of one of these bulls, directed to Robert Winchelsey archbishop of Canterbury, a provincial synod was held at London, in November A. D. 1309, in which the affair of the Templars in England was debated. A great mass of evidence against the Templars, which had been collected by the bishop of London, and other commissioners appointed by the pope to examine those of that order in England, was laid before this fynod. Upon the force of that evidence,

London.

5 Du Pin, Hift, Eccles. Cent. XIV. ch. 2.

Cent. XIV. long and warm debates enfued, and at length the following fentence was pronounced: " That the "Templars in London should be separated from one another, and examined again concerning the " crimes objected to them, and that new interro-" gatories should be put to them, that if possible " fome truth might be extracted from them by "their own confessions: that the same thing " should be done to the Templars confined at "Lincoln: that if by these separations and inter-" rogatories they confessed nothing more than they " had done before, they should then be put to the " rack; but without mutilation, or the too violent " effusion of blood. That the bishops of London " and Chester, with the other commissioners, " should acquaint the archbishop when all this was "done, that he might re-affemble the fynod "." The execution of this curious fentence took up a good deal of time: for the fynod was not reaffembled till the feast of the exaltation of the holy cross, A. D. 1311. At that meeting, all the Templars who had been seized and brought to London appeared before the fynod, and publicly confessed, "-That they had been accused of so many es articles of herely, that they could not legally exculpate themselves; and therefore they prayed " for the mercy of God and of the church; and 66 were ready to receive and perform whatever es penances should be enjoined them." hearing this, the fynod decreed,—"That they should

⁶ Wilking Concil. tem. 2. p. 314.

66 be separated from one another, and fent to the Cont. XIV.

different monasteries of England, to perform the

ee penances which should be enjoined them, until

" the holy see, in a general council, should

46 finally determine concerning their state and

" order "."

A general council, confifting of about 300 Order of Templare archbishops and bishops, met at Vienne in Dau-dissolved. phiny, October 16, A.D. 1311. The chief intention of calling this council was, to determine the fate of the Templars, and to dispose of their great estates. After long deliberation, a solemn fession of the council was held, May 22, A.D. 1312, in which pope Clement V. presided in person, and at which the king of France, the capital enemy of the Templars, was prefent. In this fession the final fentence against the Templars was, pronounced with great folemnity, diffolving that order, and bestowing all its riches on the knights-hospital-But the sentence itself contains sufficient evidence, that those who pronounced it were conscious of its severity, or rather of its injustice. For the pope, in his bull of condemnation, declared, 66 That though it could not be done according to 44 the usual rules and forms of justice, yet he " disfolved the order of the Templars by the pleni-"tude of his power"." Thus fell the famous order of the knights-templars, after it had flourished almost two centuries, and had attained a great

Wilkin. Concil. tom. 2. p. 314.

Du Pin, Cent. XIV. ch. 2. Walfing. Hift. Angl. an. 1312.

Cent. XIV. degree of prosperity and wealth. That many of its members were dissolute in their manners, is not improbable; but that an order of knights instituted for fighting in defence of Christianity, should make the renouncing of Christ, with every mark of contempt, the capital ceremony of their admission, is altogether incredible.

The English clergy complain of grievances.

From the time that William the Conqueror feparated the ecclefiastical from the civil jurisdiction, there had been continual disputes between the ecclefiastical and civil courts, about the limits of their authority. Many attempts had been made to terminate these disputes, by regulating the boundaries of the different jurisdictions. was found to be a very difficult task, on account of the mixed nature of many actions, which gave both the spiritual and temporal courts a claim to take cognizance of them. These disputes therefore still continued: and loud complaints were made, in the council of London above mentioned, of the encroachments of the civil upon the ecclefiastical courts. A long catalogue of these encroachments, which were called grievances, was drawn up by the council, and presented to the king in parliament, with an earnest supplication This curious catalogue is far too for redress. long to be here inferted; but the following article will ferve to give us some idea of what the clergy esteemed grievances in this period. --- 't Item, "When clergymen are apprehended on suspicion " of a crime, by the civil officers, they are not " immediately delivered up to their bishops upon " demand.

demand, as of right they ought to be, but are Cont. XIV. long kept in prison, contrary to the liberties of " the church and clergy." To the feveral articles in this long lift of grievances, the king, by the advice of his parliament, returned very artful and evalive answers?.

The pope, at the same time, directed a bull to Pope's the archbishop of Canterbury against the griev- that subances of the English clergy, desiring, or rather ject. commanding, the king (to whom the bull was to be communicated) to redress these grievances, in order to preserve himself and his kingdom from total destruction. In this bull, his holiness complains bitterly, "That clerks invested with the " facerdotal character, and shining with the 66 splendour of pontifical dignity, were tried by " laymen, condemned, and hanged, when found " guilty of murder or robbery, to the great pro-" vocation of the supreme King, who hath for-" bidden the fecular power to touch his anointed "." In fo shocking a manner did this pretended vicar of Christ on earth pervert and misapply the word of God!

Robert Winchelsey, archbishop of Canterbury, Archbidied May 11, A. D. 1313, in the twentieth year chelsey's of his primacy. He is faid to have been a prelate death and of great piety, an excellent grammarian, philofopher, and divine; an affecting and popular preacher. The high notions which he entertained of the immunities of the clergy involved him in

Wilkin. Concil. tom. 2. p. 314-322.

¹⁰ Id. ibid. p. 323.

Cent. XIV.

many froubles; which he fultained with uncommon fortitude ".

Reynolds archbishop of Canterbury.

The monks of Canterbury elected Thomas Cobbeham dean of Salifbury, who was commonly called the good clergyman, to be their archbishop. But the pope, at the request of Edward II. vacated this election, and, in the plenitude of his apostolic power, appointed Walter Reynolds bishop of Worcester to be primate, on the 1st day of October A. D. 1313 12,

Extraordinary powers granted by the pope.

Archbishop Reynolds appears to have been a great favourite of the reigning pope, Clement V. who not only raifed him to the primacy, but granted him feveral extraordinary powers by his bulls. By one of these bulls he gave him authority to visit the several dioceses in his province by proxy; by another he authorised him to abfolve one hundred persons who lay under the fentences of excommunication and interdict; and by others he impowered him,—to relax all who heard him preach, or say mass, from one hundred days penances;—to bestow holy orders on one hundred bastards;-to allow twelve clerks under age to enjoy benefices, with cure of fouls;—to dispense with the canons of the church against pluralities in favour of forty clergymen, &c. 13. In this manner, the popes of those times not only claimed a right to dispense with all the laws of the church them-

¹¹ Anglia Sacra, tom. 1. p. 11-17.

²² Id. ibid. p. 18.

Wilkins. Concil. tom. 2. p. 433-444.

Telves, but even to delegate this dispensing power Cent. XIV to others.

The disputes between the temporal and spiritual courts, about the limits of their several jurisdic- ticuli cleritions, still continuing, a remarkable statute. commonly called articuli cleri, was made, A. D. 1316, for terminating these disputes. As this statute was procured by the clergy, at a time when their assistance was much needed, it was very favourable to their shameful and exorbitant claims of exemption from civil authority. By the last chapter it is granted,—that when clerks confess before temporal judges their heinous offences, as theft, robbery, and murder, they cannot be judged or condemned by these temporal judges upon their own confession, without violating the privilege of the church; and that the privilege of the church being demanded in due form by the ordinary, shall not be denied 14.

It was not long before one of the bishops had occasion to plead this statute, and was protected by it from the punishment due to his crimes. This was Adam de Orleton bishop of Hereford, a factious and marrial prelate, who had appeared in arms with the rebellious barons defeated at Burrow-bridge A.D. 1321. Being accused of high treason before the house of peers, in the parliament which met at Westminster in Lent A. D. 1324, he pleaded his privilege as a clerk, not to be tried by laymen; and being supported in this plea by

Adam de Orletcii pleads th**è**

14 Coke's Institut. Part 2. p. 601, &c.

cent. XIV. the other bishops, it was admitted 15. The king, fome time after, attempted to bring him to a trial in the court of King's bench, for the same crime; but the three archbishops of Canterbury, York, and Dublin, came into court with their crosses borne before them, and carried him from the bar in triumph 16. The bishop of Hereford soon after completed his treasonable practices, by joining with the queen and Mortimer in accomplishing the destruction of his unhappy fovereign.

The citizens of London murder the bishop of Exeter.

The citizens of London did not pay so great regard to the privileges of the clergy, as the laws and courts of justice. Having embraced, with the most ardent zeal, the party of the queen and Mortimer, they feized the brave, learned, and loyal bishop of Exeter, Walter Stapleton, stripped him naked, loaded him with indignities, and at last cut off his head in Cheapfide 17.

Simon Mepham primate.

Walter Reynolds archbishop of Canterbury died November 15, A. D. 1327, and was succeeded in that very important station by Simon Mepham **. This primate had a long and warm contest with the monks of St. Augustine at Canterbury, who pleaded a papal exemption from his authority. the course of this contest, some of the archbishop's fervants beat and wounded two of the monks, and a notary, who had come to fummon their master to appear before Icherius de Concoret canon of Salisbury, who had been commissioned by the pope

²⁵ T. Walfing. Hift. Ang. p. 115. 16 Id. p. 119. 17 Id. p. 124. 18 Anglia Sacra, tom. 1. p. 18. 115.

to examine and determine this controversy. This Cent. XIV infult was so highly resented by the pope and his commissioner, that the primate was obliged to swear on the gospels,—Fhat he had given no orders to his fervants;—that he execrated what they had done; -that he had turned them all out of his fervice, and would never receive any of them into it again. He was also obliged to bring thirty other witnesses to corroborate his own testimony. Icherius, after he had thus humbled the archbishop, pronounced a definitive sentence against him, and condemned him to pay no less than one thousand two hundred and forty-one pounds to the convent for their expences 19. In this manner did the popes of those times, and their meanest agents, trample upon the greatest prelates, when they presumed to dispute their most arbitrary mandates.

Archbishop Mepham celebrated several provincial councils, particularly one at St. Paul's, London, in February A. D. 1328, and another at Magfield in July A. D. 1332. In the last of these councils, the number of the great festivals to be observed in the church of England was ascertained, and the manner prescribed in which they were to be kept 26.

This primate appears to have been very di- His difligent in discharging the duties of his office. visited the dioceses of Rochester, Chichester, Salifbury, and Bath and Wells; but when he at-

Wilkin. Concil. t. 2. p. 560.

Cent. XIV

tempted to visit that of Exeter, he met with a very bold opponent. This was John Grandison, bishop of that see, who disputed the primate's right of vifitation, and appealed to the pope 24. The archbishop, disregarding this appeal, proceeded in his visitation. But when he arrived at the confines of the diocese of Exeter, he found the Lish p, with a numerous body of armed men, ready to dispute his entrance. This affront, together with the chagrin which his unfortunate contest with the monks of Canterbury had given him, had an ill effect upon his health; and he died at Magfield October 12, A.D. 1333, after he had filled the archiepiscopal chair about five years and fix months 22. His body was for some time denied burial, until the abbot and monks of St. Augustine granted him their absolution; by which the hiftorian probably means, a discharge of the debt which he owed them 23.

Stratford primate, his great power.

John Stratford, bishop of Winchester, was, by the interest of Edward III. at the court of Rome, translated to Canterbury. This prelate had been much engaged in secular affairs before his promotion to the primacy, and was still more engaged in them after that promotion 4. For, being at the same time archbishop, chancellor, and prime minister to the young king, he had the chief direction of all the civil and ecclesiastical affairs of the kingdom. Even the monks of St. Augustine, though

²¹ Wilkin. Concil. t. 2, p. 559. 22 Anglia Sacra, tom. 1. p. 12. 23 W. Thorn. col. 2066. 24 Anglia Sacra, tom. 1. p. 20.

greatly elated with the complete victory which they Cent. XIV. had obtained over his predecessor, were glad to compromise all disputes with the new primate on his own terms, and to give up the final sentence which they had obtained in their favour 25.

Archbishop Stratford did not long enjoy this The prihigh degree of power and royal favour. Having failed in his endeavours to bring about a peace between France and England, he is faid to have advised king Edward to prosecute his claim to the crown of France, by invading that kingdom with a powerful army, promising to provide money in England for defraying all the expences of the war. His advice was taken; but he did not fulfil his promise; which obliged Edward to make a truce with the king of France, and disband his army, after he had contracted a great load of debt. king, on his return to England, November 30, A. D. 1340, expressed the most violent resentment against the archbishop, to whose negligence or infidelity, in not fending him money, according to his promise, he ascribed all his disappointments. He immediately deprived him of all his fecular employments, imprisoned his chief confidants, and would have seized his person, if he had not made his escape from Lambeth. To render him as odious to his subjects as he was to himself, Edward published a long manifesto, in which he accused him of pride, ingratitude, negligence, treachery, and various other crimes. But though the pri-

35 W. Thorn. col. 2059.

Cent. XIV.

mate had thus lost his power, and the favour of his prince, his spirit remained undaunted. He published a long answer to the royal manifesto, which he styled a defamatory libel, and denied all the facts afferted in it, in the most direct terms. He mounted his pulpit in the cathedral of Canterbury, and harangued the clergy and people in praise of his predecessor Thomas Becket; and at the conclusion of his sermon, pronounced a sentence of excommunication against all who disturbed the peace of the church,—who incensed the laity against the clergy,—who did any injury to archbishops or bishops, their spiritual fathers, the ambassassing of Christ, and pillars of the church.

The king and primate reconciled. After this quarrel between the king and primate had raged with great violence for several months, interrupting all the public business of the nation, a seeming reconciliation was patched up, with much difficulty, by the interposition of some great men. All preliminaries being settled, the primate came into the painted chamber, where both houses of parliament were assembled, April 19, A. D. 1341, and kneeling before the king, who was seated on the throne, implored his pardon and favour; which was immediately granted, at the intercession of the lords and commons.

The primate, after his reconciliation with the king, kept himself for the most part within the sphere of his own profession. He published, at Lambeth, A.D. 1342, certain statutes and consti-

26 Anglia Sacra, tom. 1. p. 19-39.

tutions

tutions for regulating the proceedings in the archbishop's court, commonly called the court of arches, from the place where it was held 27. In the course of the same year, he celebrated two provincial councils at London, in which several canons were made; but they contain very little that is either new or remarkable 28.

The pope still continuing to encroach upon the rights of the crown, and of other patrons, by refervations and provisions 29, king Edward wrote a very strong remonstrance to his holiness against these practices; in which, amongst other things, he represented, "That by these provisions and ec referentions, the encouragements of religion were bestowed upon unqualified mercenary foee reigners, who neither refided in the country, or understood its language; by which means "the ends of the priesthood were not answered. his own fubjects were discouraged from profecuting their studies, the treasures of the kingdom were carried off by strangers, the jurisdicst tion of its courts baffled by constant appeals to 45 a foreign authority, and both the crown and er private patrons were deprived of their most unquestionable rights. These mischiefs (adds he) er are now become intolerable; and our subjects in parliament have earnestly requested us to put

Remonfirance against papal provitions, &c.

²⁷ Wilkin. Concil. tom. 2. p. 681. ²⁸ Id. ibid. p. 696. 702. ²⁹ By refervations, the pope referved to himself the next presentation to any benefices he pleased; by provisions, he appointed the persons to whom they were granted to succeed the present incumbents.

Cent. XIV. " stop to them by some speedy and effectual re-"medy 30." But this most reasonable remonstrance had little or no effect.

Death of archbishop Stratford.

The wars with France and Scotland fo much engroffed the attention of king Edward, and his fubjects of all conditions, that few ecclefiastical transactions of importance occurred in the five last years of archbishop's Stratford's primacy, That prelate died on the vigil of St. Bartholomew, August 23, A.D. 1348, at Magfield, in the fourteenth year of his government of the church of England 31.

Ufford primate.

Those disputes between the crown, the canons of Christchurch, and the bishops of the province, which broke out almost on every vacancy of the fee of Canterbury, were attended with very pernicious consequences. One of the worst of these consequences was, that the contending parties frequently appealed to Rome, which greatly increased the authority of that court, and afforded a specious pretence for its most ambitious claims. present occasion the canons having elected Thomas Bradwardin to be their archbishop, the king, who defigned that high station for another, immediately applied to the pope; and, notwithstanding his late strong remonstrance against papal provisions, entreated his holiness, to raise John Ufford, dean of Lincoln, to the see of Canterbury, by way of provision. This application was too agreeable to be unsuccessful. The pope, in the plenitude of his

3º T. Walfing. p. 161.

31 Anglia Sacra, tom. 1. p 41.

power,

power, promoted Ufford to the primacy of the Cent. XIV. church of England; but that prelate died June 7, A. D 1349, without having received confecration 32.

A most destructive pestilence raged about this Great time in England, as well as in feveral other countries, and fwept away fo many of the clergy, that none could be found to perform divine service in " Before this plague (fays many churches. 66 Knyghton) you might have hired a curate for four or five marks a-year, or for two marks and his board; but after it you could hardly if find a clergyman who would accept of a viss carage of twenty marks or twenty pounds a-66 year 33,"

King Edward no longer opposing the promo- Bradwartion of his confessor Thomas Bradwardin, he was elected by the canons of Canterbury, immediately after the death of archbishop Usford, and consecrated at Avignon, where the pope then refided, on the vigil of the feast of St. Margaret. confecration-feast, cardinal Hugh, one of the pope's nephews, attempted to turn the new archbishop (who was remarkable for the humility of his appearance) into ridicule, by introducing into the hall a person dressed like a peasant, and riding on an als, who presented a petition to the pope to make him archbishop of Canterbury. But this unpolite unseasonable piece of wit was not relished by the pope and cardinals, who thought it im-

P Anglia Sacra, tom. 1. p. 42. # Hen. Knyghton, col. 2600. prudent

Cent. XIV

prudent to affront a people from whom they derived so many benefits. Archbishop Bradwardin did not long survive his confectation, dying at Lambeth, August 26, A. D. 1349, only seven days after his return to England 34. Thus there were no sewer than three vacancies of the see of Canterbury in one year.

Archbishop
lilen's
constitutions.

Simon Islep, keeper of the privy feal, fucceeded archbishop Bradwardin, and was consecrated at St. Paul's December 20, A. D. 1349. This primate proved a strict disciplinarian in spirituals, and a rigid exactor of the temporal emoluments of his fee. In his primary visitation of his province, he deprived feveral clergymen for their irregularities, and excited very strong apprehensions in fome of his fuffragans 25. His famous constitution, published at Lambeth in March A. D. 1351, breathes the same spirit of strictness in discipline. By that constitution it is decreed, that clerks who have been delivered up by the temporal judges to their ordinaries, and by them condemned to perpetual imprisonment for their crimes, shall receive only bread and water once a day, on Wednesdays, Fridays, and Saturdays; and bread and small beer on Mondays, Tuesdays, and Thursdays; and bread, beer, and pulse, on Sundays, for the honour of the day 36. This constitution was made in conlequence of the strong remonstrances of the king and temporal lords in parliament, who complained,

³⁴ Anglia Sacra, tom. 1. p. 42, 43.

³⁵ Id. ibid. p. 43.

⁵ Spelman, Concil. tom. 2. p. 597.

that the clergy grossly abused their immunities; Cent. XIV. particularly that when a clerk had been found gutilty of a capital crime, and condemned to perpetual imprisonment by his ordinary, he was either allowed to make his escape, or to live in riot and luxury in the bishop's prison 37. This primate published another constitution, A.D. 1359, forbidding courts, fairs, and markets to be kept on Sundays, and commanding all persons to go to their parish-churches on that day, to ask pardon for their offences, and to make amends for all the omissions and commissions of the preceding week 38. By another constitution, published A. D. 1362, he commands all Christians to keep all the faints days with great devotion, that they might deserve the intercession of these saints with Almighty God. The late pestilence having occasioned a great scarcity of clergymen, those who remained demanded excessive salaries for serving the cure in churches. To remedy this evil, archbishop Islep published a constitution, in which, after reproaching the clergy in very strong terms for their covetousness and other vices, he forbids any rector to give, or any curate to demand, more than one mark a-year above what had been given to the curate of that church before the plague 19.

The pope still continuing to encroach upon the Statute of rights of the crown and of private patrons, and to dispose of all the most valuable benefices, in the

P Johnson's Canons, A. D. 1364.

60

cent xiv. church, by his provisions and refervations; the fecond statute of provisors was made to put a stop to these encroachments. By this statute it was enacted,—" That if any person shall procure re"fervations or provisions from the pope, in dis"turbance of free elections, or of the presentees
"of the king, or other patrons, that then the said
"provisors, their procurators and notaries, shall
"be apprehended, and brought to answer; and
"in case they are convicted, they shall be kept in
"prison till they have made sine and ransom to the
"king at his will, and have satisfied the party ag"grieved by paying his damages 4°."

Statute of premunire.

But these papal provisions and reservations were not the only ground of complaint which the people of England had, at this time, against the court of Rome. The frequency of appeals to that court was, if possible, a still more vexatious and expensive grievance. To confine this intolerable evil within some limits, the statute of premunire was contrived. By that statute it is enacted, "That all people of the king's legiance, who " shall draw any out of the realm in a plea, 44 whereof the cognizance pertains to the king's " court, or of things whereof judgments " given in the king's court, shall have two months " warning given them to appear in the king's " courts to answer the contempt; and if they do 44 not appear in their proper persons to be at the 4 law within the time appointed, they, their pro-

⁴⁰ See Statutes at Large, p. 25. Ed III.

[&]quot; curators.

curators, &c. shall from that day forth be put cout of the king's protection, and their lands,

so goods, and chattels, shall be forfeited to the

sing, and their bodies imprisoned, and ran-

fomed at the king's will "." But no statutes could put a period to the mischiefs which England fuffered from its connection with the court of Rome, till that connection was happily diffolved.

An event happened during the primacy of arch- Power of bishop Islep, which may give us some idea of the power of the clergy in the times we are now confidering, and therefore merits a place in history. Robert lord Moreley, one of the most powerful barons of the kingdom, committed some trespasses in a park belonging to William Bateman bishop of Norwich. For these the bishop prosecuted him with so much vigour, that, in spite of all his own power, and of the most earnest interposition of the king in his favour, he was obliged to fubmit to the following ignominious penance:—To walk in his waistcoat, bare-headed and bare-foot, with a wax candle, weighing fix pounds, lighted in his hand, through the streets of Norwich, to the cathedral; and there, in the presence of a prodigious concourse of people, to beg the bishop's pardon in the most humble posture and language 42.

But though the power of the clergy, at this time was almost irresistible, when it was conducted with prudence and temper; yet when it was exercised with violence and passion, it was some times bassled.

⁴º Statutes at Large.

⁴² Anglia Sacra, t. 1. p. 415.

Cent. XIV. Of this the famous dispute between lady Blanch, baroness Wake, and Thomas de Lylde bishop of Ely, affords a most remarkable example. In the beginning of this dispute (the particulars of which are too many to be here inferted), that prelate appears to have had right on his fide; but in the progress of it, he acted with such intolerable infolence, pride, and passion, that he became universally odious, was deprived of the temporalities of his fee, obliged to fly out of the kingdom, and at last died of a broken heart, in a foreign land, A. D. 136143.

Seven sees vacant.

A most destructive pestilence raged in England, and several other countries, A.D. 1360; and in that year no fewer than feven English bishoprics became vacant, which were all filled by papal provisions 4. So little effect had the statute of provisors, which had been made against that encroachment of the pope, only ten years before.

Death of Simon lilep, and fuccession of Simon Langham.

Simon Islep, archbishop of Canterbury, did not very long furvive this great mortality amongst his brethren. For, having languished about three years under a paralytic disorder, he expired, at Magfield, April 16, A.D. 1366 45. The pope. at this time, feems to have taken a pride in difplaying his contempt of the laws which had been made in England against his provisions, by filling every fee that became vacant in that manner. Though the chapter of Canterbury had chosen

⁴³ Anglia Sacra, t. r. p. 652.

⁴⁴ Id. ibid. p. 45.

⁴⁵ Id. ibid. p. 46.

William Edyndon, bishop of Winchester, to be Cent. XIV. archbishop, the pope granted a provision to that important station to Simon Langham bishop of Ely, and chancellor of England, who was admitted into it without any opposition 46.

The translation of this prelate gave as much Verses. pleasure to the diocese of Ely, as it gave disgust to that of Canterbury. This appears from the following rhyming Latin verses made on that occasion:

Exultant cœli, quia Simon transit ab Ely, Ad cujus adventum, flent in Kent milia centum 47.

Archbishop Langham had not much comfort in Arch. his promotion, and did not enjoy it long. pope raised him to the dignity of a cardinal; and he imprudently accepted of that dignity without confulting the king; who was fo much offended at his presumption, that he seized the temporalities of his fee. Being much dispirited by the king's displeasure, he resigned his archbishopric November 28, A. D. 1368, and retired to Avignon, where he died A. D. 1378 48.

bishop ham's refignation.

On the refignation of archbishop Langham, Wittlesey William Wittlesey bishop of London was promoted to the primacy by a papal provision. About this time almost all the great places of power and profit in the kingdom were filled by clergymen; which gave so much umbrage to the commons, as

⁴⁶ Anglia Sacra, t. 1. p. 46, . 43 ld. ibid. p. 47, 48. 120.

⁴⁷ Id. ibid. p. 47.

Cent. XIV.

well as temporal lords, that they presented a petition to the king, in a parliament held at Westminster A. D. 1371, representing, " That the " government of the kingdom had for a long time " been managed by men of the church, whereby " many mischiefs and damages had happened in " time heretofore, to the disherison of the crown, "and to the great prejudice of the kingdom;" and praying,-" That it would therefore pleafe the 46 king, that laymen, and no others, might for " the future, be made chancellor, treasurer, clerk " of the privy seal, barons of the exchequer, comptroller, or other great officers and governors " of the kingdom." But to this petition the king returned the following answer, which implied a refusal: "He would do in this point what seemed " best to him by advice of his council "."

King's writs to the bishops. All the applications that had been made to the court of Rome, and all the laws that had been enacted in England against the papal provisions and reservations, had produced little or no effect. The pope still continued to bestow many of the best benefices of the kingdom upon foreigners by his provisions, with as little ceremony as if no such applications had been made, and no such laws had existed. In order to know the full extent of this grievance, the king sent his writs to all the bishops, A. D. 1374, requiring them to return certificates into chancery of all the benefices in their respective

e Parliamentary Hift. vol. 1. p. 309, 310.

dioceses that were in the possession of Italians, and CentXIV. other foreigners 50.

Archbishop Whittlesey, after a very tedious ill- Simon ness, died in summer A. D. 1374 51. Soon after primate. his death the monks of Canterbury re-elected their former archbishop, cardinal Langham, who was still alive, and refided at Avignon 12. The king, greatly offended at this choice, applied to the pope; who, at his request, translated Simon Sudbury from the see of London to that of Canterbury, by a bull, dated 11th May A. D. 1375 53. imprudent applications to the court of Rome, in consequence of disputes at home, the power of the pope was confirmed, and all attempts to diminish it were defeated.

It was probably from the information they had Extorreceived from the returns of the bishops to the above-mentioned writs, that the Commons in parliament, A. D. 1376, presented a very strong remonstrance to the king, against the intolerable extortions of the court of Rome. In this remonstrance it is affirmed, though it must be confessed it is hardly credible, "That the taxes paid to the " pope yearly, out of England, amounted to five times as much as the taxes paid to the king 54."

The infatiable avarice, and insupportable tyranny, of the court of Rome, had given fuch univerfal difgust, that a bold attack made about this time on reformathe authority of that court, and doctrines of that church.

tion of the

⁵⁰ Fox's Acts and Monuments. 51 Anglia Sacra, tom. 2. p. 120. 52 Id. ibid. s Id. ibid. 54 Cotton's Abridg. p. 128.

Cent.XIV. church, was, at first, more successful than could have been expected, in that dark superstitious age. This attack was made by the famous Dr. John Wickliff, who was one of the best and most learned men of the age in which he flourished. reputation for learning, piety, and virtue, was fo great, that archbishop Islep appointed him the first warden of Canterbury college in Oxford, A. D. 1365 55. His lectures in divinity which he read in that university were much admired, though in these lectures he treated the clergy, and particularly the mendicant friars, with no little freedom and feverity. A discourse which he published against the pope's demand of homage and tribute from Edward III. for the kingdom of England, recommended him fo much to that prince, that he bestowed upon him several benefices, and employed him in several embassies 56. In one of these embassies to the court of Rome, A. D. 1374, he discovered fo many of the corruptions of that court, and of the errors of that church, that he became more hold and more fevere in his censures of those errors and corruptions. He even proceeded fo far, as to call the pope antichrist, to deny his supremacy, and to expose his intolerable tyranny and extortions in the strongest colours. This, as might naturally have been expected, drew upon him the indignation of his holiness, and involved him in various troubles. Pope Gregory XI. pub-

⁵⁵ Collier's Church Hift, App. Nº 47.

⁵⁶ Biographia Britannica, p. 4260.

lished several thundering bulls against him, A. D. Cent XIV. 1377, commanding him to be feized, imprisoned, and brought to trial, for his damnable herefies 57. The affection of the people, and the favour of the court, protected him from imprisonment; but he found it necessary to appear before Simon Sudbury archbishop of Canterbury, and William Courtney bishop of London, who had been appointed his judges by the pope. At this appearance he had the honour to be accompanied by two of the greatest men in the kingdom, John of Gaunt duke of Lancaster, and Lord Henry Percy marshal of England. These two lords demanded a chair for Dr. Wickliff; which being denied by the bishop of London, fome very angry words passed between that prelate and the duke of Lancaster; which excited fo violent a tumult in the court, that it broke up in great confusion, without doing any business. Dr. Wickliff made a fecond appearance before the papal commissioners at Lambeth, where he was attended by so great a body of the citizens of London, that his judges were deterred from pronouncing any fentence against him; and their commission soon after terminated by the death of the pope, March 27, A. D. 1378 58.

It is very difficult to discover, with certainty and precision, what were the real sentiments, in some particulars, of this illustrious champion of truth and liberty, against the errors and tyranny of the church of Rome; because he seems, in some

His doctrines.

57 Walfing. p. 201-204.

F 2

things,

Cent.XIV.

things, to have changed his mind; and because certain tenets were imputed to him by his adverfaries which he did not hold. It is not possible, for example, to believe that so wise and good a man as Wickliff could maintain so impious an absurdity as this, "That God ought to obey the devil;" and yet this was imputed to him by his enemies ". Upon the whole, it very plainly appears from his writings, that the doctrines which he taught were very nearly the same with those which were propagated by our more successful reformers in the sixteenth century.

Council of London under archbishop Courtney.

The profecution against Dr. Wickliff was sufpended for some time, by the schism in the papacy which succeeded the death of Gregory XI. and by the infurrection of the commons in England, which threw all things into confusion. tumult, archbishop Sudbury, one of his most zealous adversaries, was beheaded by the insurgents on Tower-hill, June 14, A. D. 1381. William Courtney, bishop of London, was promoted to the primacy by a bull of pope Urban VI. (who had been acknowledged in England to be the lawful pope), dated the 8th September the same year 60. As foon as the infurrection of the commons was quelled, and the public tranquillity restored, the new primate applied with great zeal to the suppression of the heretical opinions (as he esteemed them) which were propagated by Wickliff and his followers. With this view, he affembled a council

[#] Hen. Knyghton, col. 1648. 60 Anglia Sacra, t. 2. p. 121.

of the bishops of his province, and many doctors Cent. XIV. of divinity, and of the civil and canon law, in the priory of the preaching friars, London, May 17, A. D. 1382. Before this council he laid twentyfour opinions, extracted from the writings of Wickliff, for their examination; and the council unanimously declared ten of these opinions heretical, and fourteen of them erroneous. Several suspected persons were then brought before the council, particularly Nicolas Hereford and Philip Rapyngdon, doctors in divinity, and John Ayshton, A. M. and commanded to declare their fertiments of thefe Their declarations appearing to the council evasive and unsatisfactory, they were pronounced to be convicted of herefy 61. The ancient historian Henry Knyghton relates, that Dr. Wickliff was brought before this council, and that he made a kind of recantation of his heretical opinions 62. But as nothing of this appears in the record, it is probably a mistake, if not a calumny. On the day after the conclusion of this council, there was a folemn procession in London; after which Dr. Kinygham, a Carmelite friar, preached to the people, and published the doctrines which had been condemned; declaring, That all persons who taught, favoured, or believed, any of these doctrines, were excommunicated heretics 63. give the greater weight to the decrees of this council, the clergy prevailed upon the king to publish

61 Spelman Concil. tom. 2. p. 629-636.

⁶² H. Knyghton. col. 2649. 63 Id. col. 2652.

Cent XIV. a proclamation, July 12, authorifing and con1manding the bishops to seize and imprison all perfons who were suspected of holding any of the doctrines which had been condemned 64.

> The doctrines of Wickliff had for some years made a mighty noise in the university of Oxford, where they were first published, and where they had many violent oppofers, and many zealous advocates. Dr. Berton, who was chancellor of the university A. D. 1381, and Dr. Stokes, were at the head of the former, and Dr. Hereford and Dr. Rapyngdon at the head of the latter. bishop of Canterbury sent the decrees of his late council to Oxford, commanding Dr. Stokes to publish them at St. Frideswyde's church, on Corpus. Christi day; and Dr. Rigge, the chancellor of the university, to assist and protect him in performing Dr. Philip Rapyngdon had been that office. appointed to preach at that church on that day. and declaimed with great vehemence against the corruptions of the church, and in defence of the doctrines of Wickliff; and his fermon was heard with approbation. But when Dr. Stokes attempted to publish the decrees of the council of London, he was interrupted with clamours and reproaches; which obliged him to defift, without having received any countenance or protection from the chancellor or proctors, who were fecret favourers of the new opinions. For this negligence they were fummoned to appear before archbishop Court-

⁶⁴ Spelman Concil. tem. 2. p. 628.

ney, who treated them very roughly, and by threats Cent.XIV. prevailed upon them to return to Oxford, and to publish the decrees of the council of London, both in Latin and English, first in St. Mary's church, and afterwards in the schools 65.

Death of Wickliff.

While the doctrines of Wickcliff were propagated and opposed with so much zeal, at Oxford and other places, he (being in a declining state of health) refided, during the two last years of his life, at his living of Lutterworth in Leicestershire. employed in finishing his translation of the Bible. and other works. Being seized with a stroke of the palfy, which deprived him of his speech, December 28, A. D. 1384, he expired on the last day of that year. As the clergy had hated and persecuted him with great violence during his life. they exulted with indecent joy at his difease and death, ascribing them to the immediate vengeance of Heaven for his herely. "On the day of St. "Thomas the Martyr, archbishop of Canterbury " (fays Walfingham, a contemporary historian), 56 that limb of the devil, enemy of the church, " deceiver of the people, idol of heretics, mirror of hypocrites, author of schism, sower of hatred, " and inventor of lies, John Wickcliff, was, by " the immediate judgment of God, suddenly ftruck with a palfy, which feized all the mem-66 bers of his body, when he was ready (as they " fay) to vomit forth his blasphemies against the 66 bleffed St. Thomas, in a fermon which he had

65 A Wood, Hist. Oxon. p. 190-192.

Cent.XIV.

72

"prepared to preach that day "." But these reproaches do honour to his memory, as they were brought upon him by his vigorous efforts to deliver his countrymen from the errors, superstitions, and extortions, of the church of Rome.

Great fuccess of the preachers of his doctrines.

Though the joy of the clergy at the death of Dr. Wickliff was very great, it was not of long They foon found, that his doctrines duration. had not died with him, but were propagated with great zeal, and no little fuccess, by his followers, who were commonly called Lollards 67. those who were preachers travelled up and down the country on foot, in a very plain drefs, declaiming with great vehemence against the corruptions of the church and the vices of the clergy. preachers were not only admired and followed by the common people, but were favoured and protected by feveral persons of high rank and great power, particularly by the duke of Lancaster, the lords Percy, Latimer, Clifford, Hilton, and By the zeal, activity, and eloquence, of the preachers, under the protection of these great men, the new doctrines, as they were called, gained ground so fast, that, as a contemporary historian of the best credit affirms. " more than " one half of the people of England, in a few " years, became Lollards 69." The same historian, who was a clergyman, and a most inveterate enemy

⁶⁶ T. Walfing. Hift. Angl. p. 312.

⁶⁷ Hen. Knyghton, col. 2663.

⁶⁸ Id. col. 2661.

⁶⁹ Id. col. 2664.

to the Lollards, acknowledges, that as Wickliff cent. XIV, excelled all the learned men of his age in disputation, so some of his followers, in a very little time, became very eloquent preachers and very powerful disputants; which he ascribes to the affistance of the devil, who, he says, took possession of them as soon as they became Lollards 70,

The clergy, alarmed and enraged at this rapid progress of the new opinions, attempted to put a stop to it by violence and persecution, which have been often employed by power against truth. They procured, or at least promulgated, a statute which still appears in our statute-book (though the commons, it is faid, never gave their affent to it), empowering and commanding all fheriffs to feize and imprison all preachers of herefy ". They also prevailed upon the king, A. D. 1387, to grant a commission to certain persons to seize all the books and writings of John Wickliff, Nicolas Hereford, John Ayshton, and other heretical writers, and to imprison all who transcribed, fold, bought, or concealed fuch books 72. methods the clergy hoped to interrupt the preaching and writing of the reforming teachers, by which they chiefly propagated their opinions. contemporary historian Knyghton observes, with regret, " that these laws and edicts were but slowly " and faintly executed, because the time of cor-" rection was not yet come 73."

⁷⁴ Ruffhead's Statutes at large, vol. 1. p. 358.

⁷² H. Knyghton, col. 2708, 2709.

⁷³ Id. col. 2708.

Several persons tried for heresy.

Though the violent factions amongst the nobility, and the general animofity of the laity against the clergy, on account of their excessive power and riches, prevented for a time the rigorous execution of the penal statutes against heretics; several perfons were apprehended and tried upon these statutes. Some of them, as particularly Hereford, Ayshton, and Rapyngdon, who had been the most zealous propagators of Wickliff's doctrines, were, by threats and promises, prevailed upon to make a kind of recantation, and to defift from preaching these doctrines 74. Others escaped with slight cenfures, by giving artful, evalive explanations of their tenets. In general it may be observed, that the followers of Wickliff were not very ambitious of the crown of martyrdom and none of them were capitally punished in the reign of Richard II 75.

Statute of premunire.

In spite of all the laws that had been made in England against the tyrannical usurpations of the court of Rome, they still continued, or rather increased. When a clerk had obtained a sentence in favour of his presentation to a church in the king's court, and the bishop of the diocess had inducted him in consequence of that sentence, it was usual for the pope, on the complaint of the losing party, to excommunicate the bishop. When an English bishop had by any means offended his holiness, he sometimes punished him by translating him to a foreign see, without his own consent, or that of the

⁷⁴ H. Knyghton, col. 2657, &c.

⁷⁵ Fox's Acts and Monuments, p. 436.

king. Upon a complaint of these papal usurpa. Cent.XIV. tions by the commons, in a parliament at Winchester, A. D. 1392, a very severe law was made for the punishment of those who solicited, or brought into the kingdom, any papal bulls of excommunication, translation, or other thing against the rights and dignity of the crown 76.

These contests between the king and parliament Remonof England and the court of Rome, encouraged the the Lol-Lollards to make bold and direct attacks on the established church. Accordingly, they presented ment. to a parliament which was held by the duke of York (the king being in Ireland), at Westminster, A. D. 1394, a remonstrance containing twelve articles of complaint against the church and clergy; praying for redrefs and reformation. In this remonstrance, they complain chiefly of the exorbitant power, excessive wealth, and profligate lives of the clergy, which last they ascribe chiefly to their vows of celibacy; -of transubstantiation, and the superstitious practices which the belief of it produced; -of prayers for the dead; -of the worthip of images; -of pilgrimages; -of auricular confession, and its consequences;—and of several other particulars in which the present protestant churches differ from the church of Rome 77. What reception this remonstrance met with from the parliament, we are not informed. About the same time the Lollards published several satirical papers,

lards to

⁷⁶ Ruffhead's Statutes, vol. 1. p. 406.

⁷⁷ Collier's Ecclesiaft. Hift. vol. 1. p. 598.

Cent XIV. painting the deceitful arts, abominable vices, and abfurd opinions, of the clergy in very strong colours; which excited both the contempt and hatred of the people against them. Some of these papers, written with much asperity, and no little wit, were pasted up on the most public places in London and Westminster 78.

The king returns from Ireland to protect the church.

The clergy were fo much alarmed at these bold attacks, that they dispatched the archbishop of York, the bishop of London, and several other commissioners, to the king in Ireland, to entreat him to return immediately into England, to protect the church, which was in danger of destruction. " As foon (fays a contemporary historian) as the king heard the representation of the com-" missioners, being inspired with the Divine Spirit, " he hastened into England, thinking it more " necessary to defend the church than to conquer kingdoms 79." On his arrival, he called before him the lords Clifford, Latimer, Montacue, and other great men who favoured the Lollards, and threatened them with immediate death, if they gave any further encouragement to heretical preachers. Intimidated by these threats, they complied with the king's desire, and withdrew their protection.

Several of the Lollard preachers, discouraged by this defection of their patrons, foon after recanted their opinions, and returned into the bosom of

⁷⁸ Fox's Acls and Monuments, p. 462, &c. T. Walfing. p. 351, 79 T. Walfing. p. 351,

the church. Thomas Arundel archbishop of York, Cent.XIV. who was a most violent enemy to the Lollards, obliged those in his province who recanted to take the following curious oath, which I shall give in the original language and spelling: I ----, before 46 you, worshipful fader and lord archbishop of Yhork, and your clergy, with my free will and full-avysed, swere to God and to all his seyntes, es upon this holy gospel, that fro this day forthword, I shall worship images, with praying and offering unto them, in the worship of the saints, that they be made after; and also, I shall never " more despile pylgremage, ne states of holy " chyrche, in no degre. And also I shall be so buxum to the laws of holy chyrche, and to 46 yhowe as to myn archbishop, and myn other " ordinaries and curates, and keep the laws up " my power and meyntein them. And also, I shall " never more meyntein, ne techen, ne defenden, errors, conclusions, ne techeng of the Lollards, " ne fwych conclusions and techengs that men 46 clopeth Lollards doctrine; ne shall her books, " ne fwych books, ne hem or ony fuspect or diffamed of Lollardary, receyve or company wish se all, willingly, or defend in tho matters; and if "I know any fwych, I shall, with all the hast " that I may, do yhowe, or els your nex officers, " to wyten, and of ther bokes ", &c."

When the affairs of the church were in this Archposture, and that reformation which had been

⁵⁰ Collier's Ecclefiastical Hist. vol. z. p. 599.

cent XIV. begun by doctor Wickliff had received this fevere check, William Courtney archbishop of Canterbury died July 31, A. D. 1396, and was fucceeded by Thomas Arundel archbishop of York. As this prelate had long been the most active adversary of the Lollards, he soon discovered by his conduct, that he defigned to employ against them all the additional power he had acquired by his promotion to the primacy 82. But before he had time to execute this defign, he was involved in troubles which deprived him of all his power. These troubles proceeded from his having been one of that party of the nobles and clergy, which A. D. 1386 obtained a commission from parliament, investing them with the whole power of the state. By one of those revolutions which are not uncommon in the English history, that party were now overturned, and profecuted with great feverity, for obtaining and executing that com-The archbishop, and his brother the earl of Arundel, were tried by their peers in parliament, in September A. D. 1397, and found guilty of high treason; in consequence of which the earl was beheaded, and the archbishop deprived, and banished 82.

Roger Walden primate.

After the departure of archbishop Arundel out of the kingdom, Roger Walden, treasurer of England, was promoted to the primacy, and installed March 25, A. D. 1398 83. The pope having

⁸¹ A. Wood, Hift. Univers. Oxon. p. 199.

⁸² Parliament. Hift. vol. 1. p. 464, &c. 83 T. Walfing. p. 354. gratified

gratified the king, by withdrawing his favour from CentXIV. Arundel, consenting to the promotion of Walden, and granting a bull confirming all the transactions of the late parliament, thought it a proper time to apply for the repeal of the statutes of provisors and premunire, which fet some bounds to his power in England. To folicit this affair, he fent a legate to the king, who was received with great respect, and loaded with prefents, but could not obtain the repeal of the offensive statutes 84. The ecclesiastical transactions of archbishop Walden are not well known, and could not be very important; for those troubles which commenced A. D. 1309, terminated in his deprivation, and the restoration of the exiled primate, before the end of that year.

THE history of the church of Scotland in the History of fourteenth century hath been ill preserved, owing thechun of Scotto the unfettled and unhappy state of that country in that period. William Fraser bishop of St. Andrew's having died in France, A. D. 1297, he was fucceeded by William Lamberton parson of Camplie, and chancellor of the church of Glasgow. The pope fent a bull to all the bishops of Scotland, A. D. 1302, complaining, that they stirred up the people under their charge to war against the king of England; and commanding them to promote peace 85. This papal mandate was little regarded by the Scotch prelates, particularly by those of St. Andrew's and Glasgow, who having been taken

4 T. Walfing. p. 356.

85 Rymer. Fæd. t. 2. p. 905.

Cent.XIV.

were committed to prison by Edward I. A. D. 1306 56. That prince complained to the pope of these two bishops, accusing them of having stirred up the people of Scotland to rebel against him 87. After bishop Lamberton had been confined in England above two years, having taken an oath of fealty to Edward II. he was fet at liberty, and teturned into Scotland, A. D. 1308 4. This prelate feems to have paid no regard to the oath of fealty which he had taken to the king of England, after he was fet at liberty; for he prefided in a general affembly of the bishops, abbots, priors, and clergy, of Scotland, in which the right of king Robert Bruce to the crown was afferted in the strongest terms, at Dundee, 24th February A. D. 1309 89. Towards the end of that year we find him employed, at the abbey of Holyroodhouse, near Edinburgh, in collecting evidence against the knights-templars, in conjunction with John de Soleres, the pope's legate 9°. Not long after this he feems to have returned to the party, and to have regained the favour, of the king of England. For that prince wrote a letter to the pope, dated at Berwick, 24th July A. D. 1311, earnestly intreating his holiness not to infift on the attendance of William bishop of St. Andrew's in the council of Vienne, because the residence of that prelate in Scotland was absolutely necessary to support his

authority

authority in that country ". Bishop Lamberton Cent. XIV. continued in the English interest till after the battle of Bannockburn, and the firm establishment of Robert Bruce on the throne of Scotland, when he made his peace with that prince. This excited the most violent resentment in king Edward, who wrote a letter to the pope, dated at Westminster, July 1. A. D. 1318, in which he painted the bishop of St. Andrew's in the blackest colours, as an impious traitor, who had violated the most solemn This prelate was a benefactor to his fee, built several churches, finished and consecrated his cathedral, and died A. D. 1328 b3.

Robert Wishart, bishop of Glasgow from A. D. 1272 to A. D. 1316, was a more steady patriot, Glasgow. and more zealous affertor of the independency of his country, than his brother and contemporary bishop Lamberton. This involved him in many troubles, particularly a long imprisonment in England, from which he was not delivered till after the battle of Bannockburn, when he was exchanged for some of the English nobles taken in that action 94.

James Bennet or Bane, archdeacon of St. An-Bilhop drew's, succeeded bishop Lamberton in the primacy Bane. of Scotland; and being in that high station, he crowned David II. A. D. 1329. When Edward Baliol recovered the crown of Scotland, this pre-

Bishop Landelis.

The public affairs of Scotland being very unfettled at this time, and a dispute having arisen about the fuccession to the see of St. Andrew's, it continued vacant about nine years, when William Landells, provoît of Kinkell, was promoted to it, and confecrated by the pope at Avignon A. D. This prelate enjoyed his promotion no less than forty-four years; and having a good paternal estate, he lived with great magnificence and hospitality 96. He appears to have been much engaged in the civil and political transactions of those turbulent times in which he flourished; and in particular he was the first commissioner for Scotland in the tedious negotiations for the delivery of king David II. from his captivity in England 97. Bishop Landells procured for himself and the clergy of Scotland the privilege of disposing of their personal estates by testament; which, it seems, they had not enjoyed, before his time 92. He died at St. Andrew's, 15th October A. D. 1385 99.

Stephen.

Stephen de Pay, prior of St. Andrew's, was elected to be bishop of that see; but being taken prisoner by the English in his passage to the papal court, he died at Alnwick, in March A.D. 1386 100.

Robert Trail, doctor of the civil and canon laws, was promoted to the primacy of Scotland by the pope, who paid him some very high, but not unmerited, compliments on that occasion. This prelate had the chief direction both of the civil and ecclesiastical affairs of the kingdom, which he conducted with equal wisdom and felicity. He was so rigid and severe (says a contemporary historian) in the exercise of church-discipline, that no clergyman in his diocese dared to keep a concubine publicly 101. He built the castle of St. Andrew's, in which he died A. D. 1401.

There were twelve bishoprics in Scotland in this period, besides that of St Andrew's; which were those of Glasgow, Dunkeld, Aberdeen, Moray, Brechin, Dunblane, Ross, Caithness, Orkney, Galloway, Argyle, and the Isles. But a particular detail of the several prelates of these sees would be more tedious than instructive 102.

The doctrines of Wickliff, which made so much noise in England, seem to have been little known or regarded in Scotland in the sourteenth century. This was probably owing to the violent animosities and frequent wars which then subsisted between these two kingdoms.

GREAT BRITAIN.

BOOK IV.

CHAP. III.

History of the Constitution, Government, and Laws of Great Britain, from the death of king John, A.D. 1216, to the accession of Henry IV. A.D. 1399.

THE constitution, government, and laws of Various Britain, have been formed upon various plans, and have passed through various changes, in their progress towards that high degree of excellence and stability to which they have happily attained. The plans of the British, Roman, Saxon, and Norman governments have been delineated, and a general view of their several systems of laws G 3 and

and political arrangements hath been given in the former volumes of this work.

General plan of the conflitution the fame in this as in the former period.

That plan of government and system of laws, commonly called the feudal system, which was established in England by the Normans, soon after their fettlement in that part of this island, and gradually introduced into the other British states, continued to form the political constitution of all these states through the whole of our present period; but not without various changes in its feveral parts. Some of these changes, produced by faction and party-rage, were very great, but of short duration: others, which were the result of experience, and of the change of circumstances, were not so violent, but more permanent. ferring the reader to the third chapter of the third book of this work, for the general plan of the Anglo-Norman constitution, government, laws, both at their first introduction, and as they stood at the conclusion of the former period, I shall endeavour in this chapter to point out the principal changes that were made in these important objects in the course of our present period. In doing this, the greatest sincerity, brevity, and plainness, shall be studied.

¹ See vol. 1. p. 237-258.; vol. 3. p. 299-439.; vol. 6. p. 1----

SECTION I.

Changes in the Constitution, Government, and Laws of Britain, in the reign of Henry III. from A. D. 1216 to A. D. 1272.

HE Great Charter granted by king John tothe Great wards the conclusion of the former period, contains a very distinct and authentic plan of the English constitution, as it stood at that time; at least in speculation. As soon as this great charter was obtained, it became the idol of the people of England, who esteemed it the great security of their most valuable rights and liberties. But it was not viewed with the fame favourable eyes by those who had the administration of government in their hands, who were very backward in executing its This produced frequent most important articles. and earnest cries for the execution and confirmation of that famous charter; and these cries were effectual when the king and his ministers stood in particular need of the favour and affiftance of the people, who commonly paid for these confirmations by liberal grants of money. Accordingly, the Great Charter was confirmed (with some variations, occasioned by the change of circumstances) no less than seven times in the reign of Henry III. and some of these confirmations were attended with

G 4

very great folemnities. In the second year of this reign, A. D. 1217, the articles respecting the royal forests were lest out of the Great Charter, which was then confirmed, and formed into a separate charter, called Charta de Foresta; and these two charters after this were always separated. It would be tedious to give a minute detail of all the variations of the Great Charters of Henry III. from that of king John; but the reader may satisfy himself on this subject, by comparing the charters granted by Henry III. A. D. 1224, inserted in the Appendix to this volume, with that granted by king John, in the Appendix at the end of the fixth volume.

Some changes were made in the ranks and orders of men in fociety, in the reign of Henry III. Those in the lowest rank were still in the same wretched state of servitude as formerly. Of this we have sufficient evidence in the Great Charters of that prince, in which those who had the custody of the estates of minors are prohibited from destroying or wasting the men or cattle upon these estates, placing both on the same footing. According to Bracton the samous lawyer, who slourished in this reign, all the goods a slave acquired belonged to his master, who might take them from him whenever he pleased. Slaves were still an

⁵ Append. No 1.

⁶ Bracton, l. 1. c. 9. p. 6.

article of commerce, even in the next reign. "In "the same year, 1283 (say the Annals of Dunse staple), we fold our slave by birth, William 66 Pyke, and all his family, and received one " mark from the buyer"." But there were different orders of flaves, and different degrees of fervitude, in this, as well as in the preceding period. The next rank in society consisted of farmers, mechanics, and traders who were freemen. but were either not proprietors of land, or only of fmall parcels. The yeomanry and capital burgesses in great towns, considered themselves as of a rank superior to the former. The distinction between the nobility and gentry began to be conspicuous in this reign. Anciently, all who held of the crown in capite were esteemed noble, and formed one order; but the great inequality of the power and wealth among the members of this order, laid the foundation of a division of them into the greater and smaller barons. This diyision became plain, when they began to be summoned to parliament in different ways, the greater barons by a particular fummons directed to each of them, and the smaller by a general summons to those in each county. But even after this, they for fome time formed only one affembly, and, mingled together as persons of the same rank, when they appeared in parliament. The division became more conspicuous after the establishment of the house of commons, when the smaller barons

⁷ Annal, Dunkap. an. 1283.

⁸ Braston, p. 7.

and freeholders no longer mingled with the greater, and were no longer their peers, nor appeared in parliament each in his own right, but only as representatives.

Conflitution of parliament at the end of the laft period.

Nothing can be better afcertained, or more clearly defined, than the constitution of the parliament of England when the great charter was granted by king John at the end of our last period. The members who composed that affembly, the manner in which they were fummoned, with feveral other particulars, are thus described in that charter: "To have a common council of the kingdom, to 44 affels an aid, otherwise than in the three foresaid « cases, or to assess a scutage, we will cause to be " fummoned the archbishops, bishops, earls, and « greater barons, personally, by our letters; and besides we will cause to be summoned in general 64 by our sheriffs and bailiffs, all those who hold " of us in chief, to a certain day, at the distance of forty days at least, and to a certain place; and in all the letters of fummons, we will express et the cause of the summons; and the summons being thus made, the business shall go on at the day appointed, according to the advice of those " who shall be present, although all who had been " fummoned have not come "."

No change seems to have been made in the constitution of the parliament of England in the former part of the reign of Henry III. as appears from the descriptions given of these assemblies by

⁹ See vol. 6. Append. Nº 1. p. 384. Nº 2. p. 397.

Ŧ,

2

Matthew Paris, the best contemporary historian 19. It would be tedious to introduce all these descriptions, which (though they differ a little in words, fome of them being more general, others more particular) are all to the same import. When the members are described in general, it is commonly in fuch words as these: - Magnates Anglie, tam laici quam prelati, "-The great men of Eng-" land, both of the laity and clergy "." following is the most particular description of the members of a parliament (held at London A.D. 1237) to be found in this historian: " The king immediately fent his royal writs into all parts of 66 England, fummoning all concerned in the kingdom of England, viz. all archbishops, bishops, " abbots, installed priors, earls, barons, and all others without omission "." By this last expression, all others without omission, we are certainly to understand those who are thus described in the great charter, all those who hold of us in chief; who were summoned in general by the sheriffs. For all the members of this parliament are afterwards called magnates et nobiles, " great men " and nobles," of whom, the historian fays, " an "infinite multitude came to London"." members of a parliament which met at Westminster A. D. 1244, are thus described:—" The 44 archbishop of York, and all the bishops, ab-

" bots, and priors of England, by themselves, or their procurators, and also all the earls, and also most all the barons of England "4."

Change in the constitution of parliament.

The great councils of the kingdom feem to have been conflituted according to the plan in the great charter, till the mad parliament, as it was called. which met at Oxford, June 11, A. D. 1258, made a violent change of this, as well as in every other part of the constitution. That party of the barons, headed by Simon de Montfort earl of Leicester, which had long opposed the court, came to this parliament armed, and attended by fuch numerous retinues, that they were completely masters of the field, and compelled the king to confent to every thing they proposed. Twenty-four great men were invested with authority,—to name the king's council, the great officers of the crown. and the governors of the royal castles,—to regulate the king's household,—to manage his revenue, to make laws,—and, in a word, to do almost whatever they pleased ". One of the first acts of these twenty-four dictators was a decree, that there should be three parliaments every year, one in February, one in June, and one in October. But these parliaments were to be constituted in a very extraordinary manner, and were to confift only of the members of the king's council, fifteen in number, and twelve barons chosen to represent the whole community. These twelve barons were

^{*} Mat. Paris, p. 393. col. 2.

¹⁵ Annal. Monaft. Burton, p. 407-413.

accordingly chosen by the parliament at Oxford to represent the community in future parliaments; and the record of their election may be thus translated: "These are the twelve which are chosen by the barons to treat at the three parliaments in " a year, with the king's council, for all the com-"munity of the land, on public business; the sishop of London, the earl of Winchester, the " earl of Hereford, Philip Baffet, John de Ba-" liol, John de Verdun, John de Gray, Roger " de Sumery, Roger de Montalt, Hugh Despenser, "Thomas de Gresley, Egidius de Argenton 16." Whether there were parliaments on this plan in October A. D. 1258, and in February and June in the year following, is uncertain; but it appears that there was one in October A. D. 1259, by which the famous provisions of Oxford, made by the twenty-four barons, were confirmed; for to these provisions or decrees the following confirmation is subjoined: "These are the provisions and. " decrees made at Westminster after Michaelmas, " by the king and his council, and the twelve et chosen by the assent of the whole community of England, which were then at Westminster, in the year of the reign of Henry the fon of John the fortieth and third "." The oftensible reason of this great innovation was, to relieve the community or body of those who had formerly been bound to come to parliaments from the expence and trouble of personal attendance; but the

²⁶ Annal. Monast. Burton, p. 414.

real object of it unquestionably was, to perpetuate the power of the earl of Leicester and his party.

Another change in the conftitution of parliament.

The above plan of a parliament could not fail to be unpopular, as it excluded all the small and many of the great barons from the public councils, under the specious pretence of relieving them from expence and trouble. It was therefore foon laid aside, and another of a more comprehensive nature, and nearer to the ancient model, substituted in its place, by the same party. After the earl of Leicester and his partisans had obtained the victory in the battle of Lewes, May 14, A.D. 1264, and had got the king, prince Edward, Richard king of the Romans, and his fon Henry, into their hands, they were at great pains to obtain the public approbation of their schemes for establishing their own power on the ruins of the royal authority. With this view they obliged the king to call a parliament, constituted in a different manner from that prescribed in the great charter, or in their own former plan. To this famous parliament, which was to meet at London January 20, A. D. 1265, only eleven bishops, five earls, and eighteen great barons, all of the predominant party, were fummoned by particular writs 18. But to supply the places of the prelates, earls, and barons, of the royal party, who were not fummoned, particular writs were directed to fixty-four abbots, thirty-feven priors, and five deans 19. This very remarkable circumstance was

Dugdale's Summons to Parliament, p. 1-2. 9 Id. p. 2, 3.

probably

probably owing to the high degree of favour in which the earl of Leicester stood with the clergy, who confidered him as a faint and champion of the church 20. Writs were also sent to all the sheriffs. in England, commanding them to cause two of the most discreet knights of each county to come to this parliament. Similar writs were directed to the citizens of feveral cities, and burgeffes of feveral burghs, requiring each city to fend two of its most discreet and honest citizens, and each burgh two of its most wise and upright burgesses 24. Each of the cinque-ports was commanded to fend two of its barons. In what manner these knights. citizens, burgesses, and barons, of the cinqueports, were chosen, we have no account. But as they appeared as the representatives of those by whom they were fent, their expences were to be borne by their constituents 22. We have no hint in any of our historians, that this parliament was divided into two houses. With whatever views this plan was formed, it was a near and happy approach to that fystem which hath been established in England above five hundred years: a degree of antiquity to which few political arrangements can pretend.

Though Henry III. was certainly neither a very Statute great nor wife king, feveral good laws were made in his reign, which are still in force, and have a place in the statute-book. By one of these sta-

Brady's Introduction, &c. p. 140, 141.

96

tutes made at Merton A.D. 1236, a controversy concerning baftardy, which had long subsisted between the ecclefiastical and civil courts, was finally determined. By the Roman and canon laws, the subsequent marriage of the parents legitimated the children which had been born before that marriage; but by the ancient customs and common laws of England, all children born out of wedlock were still reputed bastards, though their parents afterwards married. All the prelates in the parliament at Merton most earnestly insisted to have the regulation of the canon law, in this particular. adopted into the law of England; but all the temporal barons replied with one voice, "We will not fuffer the ancient and approved laws of " England to be changed 23." By another statute made in the parliament of Merton, it is enacted, 46 That lords who married their wards, before " they were fourteen years of age, to villains, or or burgesses, to their disparagement, should lose "the wardship of their lands 24:" a proof of the contemptible light in which burgeffes appeared to the haughty barons of those days, and even to their vassals. The statutes concerning the exchequer, which were made A.D. 1266, are remarkable in feveral respects. They are the first of our statutes in the French language. might perhaps be owing to the predilection of the persons who drew up those statutes for that lan-

Ruffhead's Statutes, vol. 1. p. 19. Barrington's Observations on the Statutes, p. 39. 48 Statutes, vol. 1. p. 18.

guage; which was much better and more generally understood in England at this time than the Latin, in which all the preceding statutes had been penned. By the first statute of the exchequer, several very humane and equitable regulations are made for preventing too great severities in collecting the royal revenues. In particular, it is provided, that no man's sheep, or his beasts, which are necessary for the cultivation of his lands, shall be distrained for the king's debt, or for the debt of any other man25: a laudable attention in the legislature to the promoting of agriculture. The fecond statute of the exchequer contains feveral prudent regulations concerning the terms and methods of accounting at the exchequer, and for preventing the king from being defrauded of his revenues, or imposed upon in the prices of work done, or things provided for his use 26. prices of the important articles of bread and ale had been fettled by very ancient statutes, in proportion to the prices of grain, to prevent the impositions of bakers and brewers. These laws were confirmed and enforced by the statute of the pillory and tumbrel, which was made in a parliament at Winchester, A.D. 1266; by which, bakers who frequently offended, were to be punished by the pillory, and brewers (who were all women) by the tumbrel, or ducking stool 27. In the same statute, many wife regulations are made, -for afcertaining

⁵ Statutes, vol. 1. p. 24. 26 Id. ibid p. 25-28.

²⁷ Id. ibid. p. 28. Barrington's Observations, p. 42.

the prices of grain,—for examining weights and measures,—for preventing the sale of unwholefome meats and liquors,-and for restraining various arts of imposing upon the people, and raising the prices of provisions. The last statutes in this long reign were made in a parliament at Marlborough A. D. 1267, after the restoration of the royal authority by the victory at Evesham, and were intended to put a stop to many disorders which had prevailed in the late times of anarchy and confusion. These statutes consist of twentynine chapters; and contain feveral good laws,-for restraining the tyranny of the great barons, by facilitating appeals from their courts to those of the king;—for preventing cruelty, in taking diftresses; and on some other subjects. By the twenty-third chapter, farmers are prohibited from making waste or sale of the woods or men upon their farms, without special licence in writing 28. In a word, it cannot be denied, that Henry III. appears to greater advantage as a legislator than in any other point of view 29.

Common law.

The common as well as the statute law of England received considerable improvements in the reign of Henry III. This will appear evident even from a cursory comparison of the treatise of Glanvile, who wrote in the reign of Henry II. with that of Bracton, who wrote in this period. This, we are told by the best authority, is no less

²⁸ Statutes, vol. 1. p. 30-40.

²⁹ Barrington's Observations, p. 57.

evident from the judicial records in the time of Henry III. which are still extant, and in which the pleadings appear more perfect and orderly than in those of the preceding period 30. Several circumstances concurred to promote those improvements in the common law at this time;—particularly, the fettlement of the court of common pleas at Westminster;—the retreat of the clergy, who were great enemies to the common law, both from the bench and from the bar, in obedience to a canon made A. D. 1217;—the establishment of the law-colleges, the inns of court for the education of common lawyers;—the decline of trials by ordeals and fingle combat,, which were now much discountenanced; -and the statute subjecting pleaders to a fine for abfurd and foolish pleading 31.

Henry III. was deprived of almost all the prerogatives of his crown by the parliament at Oxford,
A. D. 1258, and allowed to retain little or nothing
but the name of king. He even continued in that
state of depression and insignificancy for several
years; during which the kingdom was a scene of
the greatest misery, the barons of the different
parties burning each others houses, and desolating
each others lands. But after the fall of the earl of
Leicester in the battle of Evesham, A. D. 1265,
Henry was restored to the exercise of all his former
prerogatives and rights, and the country to its
former tranquillity and good order.

Royal prerogatives,

³⁰ Hale's History of the Common Law, ch: 7. p. 156.

³¹ Statutes, vol. 1. p. 35. Barrington's Observat. p. 52. Spelman and Wilkin's Concil. c. 1217. Rymer, t. 2. p. 228.

Royal re-

The revenues of the crown of England flowed from the same sources in this as in the former period, and, with prudent management, were abundantly fufficient for every necessary purpose 32. But Henry III. was a bad occonomist, and dissipated these revenues,-by his expeditions into France,—his vain expensive attempt to procure the kingdom of Sicily for his fecond fon Edmund, and chiefly by his unbounded liberality to his favourites, which involved him in an incredible load of debt, and funk him into a degree of poverty very unbecoming the royal dignity. obliged him to make frequent applications to his people in parliament for grants of money that was not due to him by any legal title; which were often refused, and sometimes given. These grants commonly confisted of a tenth, a fifteenth, a twentieth, or some other proportion of the value of their moveable goods. When a tenth or fifteenth was granted by parliament, four knights in each hundred were chosen in the county-court of each county, to act as commissioners for ascertaining the value of the moveables of the inhabitants of their respective hundreds; and according to their valuation the tax was to be levied. On these occasions. no value was fet on the books of the clergy, the ornaments of churches, the horses and armour of knights, and the implements of husbandry 33.

fifteenth

Book IV:

See vol. 6. chap. 3. Madox's History of the Exchequer, chap. 10. 18. p. 202—535. Blackstone's Commentaries, vol. 1. ch. 8. 3 Annal. Dunstap. vol. 2. p. 434. Dr. Brady's Append.

fifteenth that was granted both by the clergy and laity, A. D. 1225, produced (as we are told by a contemporary historian) 90,000 marks 34: a very great fum in those times. Henry III. obtained feveral grants of this kind from his parliaments; but they were commonly given as the price of certain privileges and immunities which they claimed 35. By this means the improvidence of our princes contributed not a little to improve the constitution, to secure the rights, and establish the liberties of their subjects. The Jews in England. who were very numerous and opulent, were frequently fleeced without mercy, and fometimes mortgaged for the payment of the king's debts 26. At one time a tallage of no less than fixty thousand marks was imposed upon the Jews, and exacted with great severity 37.

Upon the whole, though the long reign of Henry III. was unfortunate in several respects, it was not unfavourable to the interests of law and For in that reign the charters were confirmed;—the statute and common law improved; -the crown, by the great diminution of its hereditary funds, was made more dependent on the people, and the constitution of the parliament was brought nearer to its present model.

THE constitution, government, and laws of Governe Scotland, as far as we are acquainted with them,

H 3

Book IV.

appear to have been nearly the same with those of England in this period. Alexander II. and his - nobles warmly espouled the cause of the English barons, who obtained the great charter from king John, and must therefore have been well acquainted with that famous instrument. The two British nations at no time lived on a more friendly footing. than in the reign of Henry III. owing, in some measure, to the near relation that then subsisted between the two royal families, Alexander II. having married the fifter, and his fon Alexander III. the daughter of that prince. This gave occasion to a free and frequent intercourse between the two courts and kingdoms, by which they became acquainted with each other's laws and customs. The parliament of Scotland was constituted exactly according to the plan of the English parliament in the great charter of king John. The laws ascribed to Alexander II. are faid to have been made,with the counsel and consent of venerable fathers, bischops, abbats, earls, barons, and " his gude fubjects "." By these last we are probably to understand the smaller freeholders, who were fummoned in general by the sheriff of each county or shire. There is such a similarity between many of the laws of England and Scotland in this period, as demonstrates, that the one must have been copied from the other. Of this it will be fufficient to give two examples, out of many that might be given. By the eleventh chap-

^{*} Regiam Majestatem, p. 328.

ter of the forest-charter of Henry III. it is granted, - "Whatsoever archbishop, bishop, earl, or 66 baron, coming to us at our commandment, of passing by our forest, it shall be lawful for him 66 to take and kill one or two of our deer, by view of our forester, if he be present; or else 66 he shall cause one to blow an horn for him, that " he feem not to fteal our deer; and likewise they " shall do returning from us, as it is aforesaid 19." By the fourteenth chapter of the forest laws of Scotland, it is enacted,—" All bishops, earles, or barones, cummand to the king, at his com-" mand, and passand be the forest, may lesumlie " take ane or twa beafts, at the ficht of the " forestar, gif he be present; otherwaies he may " blaw his horne, that he appear nocht to do the " fame thefteouslie; and he may do swa as said is " returnand hame agane 40." By the statute of Henry IIL concerning the affize of bread and ale, a baker, for the third offence is to be fet in the pillory, and a brewer is to be punished by the ducking-stool 41. By the twenty-first chapter of the borough-laws of Scotland, it is enacted,-Gif ane baxter or ane browster trespasse thrise, " justice shall be done upon them; that is, the 66 baxter shall be put upon the pillorie, and the 66 browster upon the cock-stule 42." Civil causes still continued to be tried by juries in Scotland, as well as in England; and these juries, in both

countries,

³⁹ Statutes, vol. 1. p. 13.41 Statutes, vol. 1. p. 22.

⁴⁰ Regiam Majestatem, p. 323. 42 Regiam Majestatem, p. 229.

H 4

countries, were liable to be tried, and severely punished, for false or unjust verdicts 43. Trials by fire and water ordeals were discountenanced and prohibited by both nations, about the same time; but those by single combat were still frequent. In a word, the laws of both the British states were so much the same in this period, that a distinct delineation of those of the one may serve to convey no very impersect idea of those of the other.

SECTION II.

Changes in the Constitution, Government, and Laws of Britain, in the reign of Edward I. from A. D. 1272, to A. D. 1307.

more illustrious as a general, but more illustrious as a legislator. In the former capacity he had many equals, and some superiors; in the latter, he was equalled by sew, and excelled by none of the kings of England. For this reason, the changes that were made in the constitution, government, and laws of his dominions, in his reign, merit our particular attention. To prevent confusion in our views of these important objects, we shall consider the most important changes that were made in this period, 1st, in the constitution of the parliament; 2dly, in the magistrates and courts of justice; 3dly, In the

43 Regiam Majestatem, I. 1. c. 12. 14.

statute.

statute-law; 4thly, In the common-law; 5thly, In the prerogatives of the crown; and 6thly, In the royal revenues.

As the parliaments of England have long been the chief guardians of its laws and liberties, its prosperity hath very much depended on the right constitution and proper influence of these august affemblies. Whenever parliaments were discontinued, or deprived of their due degree of power, the people had reason to tremble for their liberties; and, on the other hand, when they exceeded their bounds, and deprived the crown of its just prerogatives, they had no less reason to dread the destruction of the constitution. It is therefore of importance to attend to the various forms and circumstances of these assemblies in every period of our history.

That excellent plan of a parliament which had been introduced by the earl of Leicester and his parliaparty, in the 49th of Henry III. feems to have flored. been laid afide, and the ancient model in the great charter of king John restored, in the last years of that prince's reign and in the first ten years of Edward I. This, at least, appears probable, from the descriptions of these assemblies both in our histories and statutes. The full st and most particular description of their constituent members is to be found in the preamble to the first statutes of Westminster, which were made in a general and

¹ Statutes, vol. 1. p. 30-122. Brady's Introduction, p. 144-

full parliament, as it is called, A. D. 1275:
"These be the acts of king Edward, son to king
"Henry, made at Westminster at his first par"liament general after his coronation, on the
"Monday of Easter Utas, the third year of his
"reign, by his council, and by the assent of the
"archbishops, bishops, abbots, priors, earls,
"barons, and all the commonalty of the realm,
"being thither summoned "." By all the commonalty of the realm we are probably to understand, all who held smaller portions of land than a
whole barony of the king in capite, who were summoned to parliaments in general by the sheriss of
their respective counties.

Leicester's plan of parliaments revived.

Edward I. having completed the conquest of Wales, and taken David, the last of its princes, prisoner, called a parliament to meet at Shrewsbury, September 30, 1283, for the trial of the captive prince and the fettlement of the conquered country. This parliament appears to have been constituted according to the plan of that which met at London January 20, A. D. 1265, commonly called Leicester's parliament. It consisted of all the great barons spiritual and temporal, who were fummoned by particular writs; of two commissioners chosen by the smaller barons or freeholders of each county, in obedience to precepts directed to the sheriffs for that purpose; and of two commissioners from each of the following twenty-one cities and boroughs, viz. London,

Statutes, vol. 1. p. 40.

Winchester, Newcastle, York, Bristol, Exeter, Lincoln, Canterbury, Carlisse, Norwich, Northampton, Nottingham, Scarborough, Gremesby, Linn, Gloucester, Yarmouth, Hereford, Chester, Shrewibury, and Worcester's. What motives determined Edward to adopt this form at this time cannot be discovered with certainty. It is most probable, that the general fummons of the fmaller freeholders by the sheriff had of late been difregarded, and that few or none of them had attended parliaments, which was too expensive for persons in their circumstances; and that for this reason they were now indulged to appear by representatives, whose expences they bore. This cause afterwards produced a fimilar regulation in Scotland 4. Soon after this form was introduced, great precautions were taken to fecure the attendance of these representatives; and each of them, as soon as he was chosen, was obliged to find three or four perfons of credit to be furcties for him that he would attend 5.

After the above form of parliament was revived, Variations it was not strictly adhered to for some time, but forms of feveral variations took place. The famous par- parlia-ments. liament which was held at Westminster in the 18th of Edward I. seems to have been differently constituted at different periods. It was composed on the 1st day of June of prelates, earls, barons, and

³ Parliament. Mift. vol. 1. p. 86.

⁴ Effays on British Antiquities, effay 2.

⁵ Brady's Introduct. p. 153.

other nobles, who granted the king an aid of forty shillings on every knight's fee 6. On the 14th of the fame month the king fent letters to all the sheriffs, acquainting them, that the earls, barons, and some other nobles, had made certain special requisitions, about which he desired to consult with others of the feveral counties; and defiring each sheriff to cause two or three of the most discreet knights of his county to be chosen and fent to parliament three weeks after Midsummer at farthest. We hear of no citizens or burgesses being in this parliament. While the elections of knights were making in the feveral counties, the parliament continued fitting, and the statutes called Westminster the third were made by it on July 8. doth not appear with certainty, what the affair was about which the king defired to confult the reprefentatives of the counties; but it feems most probable, that it was the banishment of the Jews. which was a great national concern, and took place at this time?. Some parliaments in this period were called general, and fome particular. In thefe last, the king confulted only with such of the great men of the clergy and laity as he thought proper to felect. Several of our ancient statutes feem to have been made by these particular parliaments". In some of the parliaments of this

^{- 11} Statutes, vol. 1. p. 63. 69, &c.

reign, the smaller barons in each county were reprefented by two, in some by three, and in some by four commissioners; and the representation of cities and boroughs was still more unsettled 12. We even meet with one parliament in this reign, in which there was not fo much as one clergyman; and with another to which not only the archbishops, bishops, abbots, and priors, but even the archdeacons, with a representative of every chapter, and two representatives of the inferior clergy of every diocess, were called 13. In a word. nothing can be more certain than this, that the constitution of the parliament of England was far from being fixed and uniform in the reign of Edward I. In general, however, we may observe with pleasure, that the frame of these assemblies gradually approached nearer and nearer to that admirable model which hath been fo long established, and hath contributed so much to the preservation of our rights and liberties.

This unsettledness of the form of parliaments Greatinggave the crown too great an influence in these assemblies; and some other circumstances still in parliafurther added to that influence. As the great barons, in the times we are now delineating, delighted to refide at their castles in the country, and had but little taste for tedious political investigations, the fessions of parliament were commonly very short. This made it necessary to prepare

business

²² Brady's Introduct. p. 151.

B Chron. T. Thorn, col. 196. Brady's Introduct. p. 155.

business in such a manner, that it might be dispatched in a little time, and without much expence of thought. With this view, the laws which the king desired to have enacted, were drawn up by the council or the judges, in the form of statutes, read in parliament, and at once either passed or rejected. Several of our ancient statutes bear evident marks of their having been made in this manner.

Triers of petitions.

'As one great end of parliament was to redréss both general and particular grievances, especially fuch as could not be redreffed by any other means. many petitions were presented to every parliament for that purpole. To prevent their fpending any time in reading and confidering trifling or unreasonable petitions, certain persons were appointed by the king, some time before the meeting of a parliament, to be receivers and triers of petitions. from the several parts of his dominions. On the first day of the parliament, proclamation was made at the door of the house, and other public places, that all persons who had any petitions to present, should give them in to those who had been appointed to receive them 16. As these receivers and triers of petitions were named by the king, they probably acted under his direction; and they feem to have borne a very great resemblance to the lords of the articles in the parliament of Scotland 17.

⁴ Hale's Hift. Common Law, ch. 1. p. 13, 14.

^{*5} Statutes, vol. 1. p. 52, 53.

²⁶ Ryley Placita Parliamentaria, p. 240.

⁷ Essays on British Antiquities, p. 49.

There is no evidence that the parliament of Only one England was divided into the two houses of lords parliaand commons, in the reign of Edward I.; and it is most probable that it still continued to form only one great affembly. But as this affembly confifted of feveral distinct orders of men, as bishops, abbots, priors, earls, barons, knights, citizens, and burgesses; and as these different orders had different and fometimes opposite interests, it is highly probable that one or more of these orders did retire into a separate room, on some occasions, and held confultations by themselves. This we know with certainty, that though the convocations of the clergy, in this period, made commonly only one affembly, and fat in one house. yet at some times they divided into four troops, as they were called, of which the bishops made one troop, the deans and archdeacons another, the abbots and priors a third, and the proctors of the inferior clergy a fourth; and each troop deliberated by itself 18. The representatives of cities and burghs, who were summoned to the parliament at Shrewsbury, A. D. 1283, appear to have met at the village of Acton-Burnel, while the rest of the parliament fat at Shrewsbury. A little before this (January 20, the same year), there were three distinct parliaments at the same time, in three different cities, one at Northampton, one at York, and one at Durham, to each of which the king

²⁸ Hody's History of Convocations, part 3. p. 153.

fent commissioners to represent his person, as he was then engaged in the conquest of Wales.

Method of terminating a feffion of parliament.

When the business of a session of parliament was finished, it was dismissed by proclamation; ofwhich it may be proper to give one example, near the end of this reign, A. D. 1305: " All arch-" bishops, bishops, and other prelates, earls and " barons, knights of counties, citizens, burgeffes, " and other people of the commons, who have " come at the commandment of our fovereign lord 44 the king to this parliament; the king thanks "them much for their coming; and wills, that when they please, they may return into their 66 own countries, provided that they come back, " immediately and without delay, when they are " remanded; except the bishops, earls, barons, and justices, and others, who are of the council of our fovereign lord the king, who shall not " depart without the special licence of the king. "Those also who have business may stay, and orosecute their business. And the knights who. " have come for the counties, and the others who " have come for the cities and borroughs, may " apply to fir John de Kirkeby, and he will cause "them to have briefs to receive their wages in 4c their own countries. And the faid John de Kirkeby, in confequence of this proclamation, will deliver to the chancellor the names of the " knights who have come for the counties, and " the names of the others who have come for the

"cities

³⁹ Hody's History of Convocations, part 3. p. 378-383.

es cities and borroughs; and it is proclaimed, " that all who desire to have briefs for their ex-• pences, as is faid above, shall apply there for "these briefs 20." When a session of parliament had been terminated in this manner, the king, on the next occasion, might either call a new parlia-, ment, or command the sheriffs to send the members of the former parliament, causing others to be elected in the room of fuch as had died or were infirm 21. The first of these methods was most commonly purfued.

The fessions of parliament, in this period, were Petitions fo short, and the members of them so impatient to return to their respective countries, that many petitions commonly remained unanswered, and many appeals undetermined. The king, with the bishops, earls, barons, justices, and others of his council, answered these petitions and determined these appeals; which is the reason that they, together with those who had business depending, were commanded to stay till they received permission to depart. After that very session of parliament, which was terminated by the above proclamation, when it had continued about three weeks, the king and his council gave answers to no fewer than one hundred and fix petitions 22.

In the preceding period, a brief description was Courte, given of the several courts, judges, and magistrates,

bytheking

²⁰ Ryley's Placit. Parliament. p. 241.

²⁴ Brady's Introduct. p. 152.

²⁴ Ryley's Placit. Parliament. p. 241-265.

which were established in England by the Normans, for the administration of justice and execution of the laws; and therefore it will be sufficient in this place to mention the most important changes that were made in these particulars, in the course of this period ²³.

Court of common pleas.

By the seventeenth article of the Great Charter of king John, it was declared, "Common pleas " shall not follow our court, but shall be held in " fome certain place 24." To carry this article into execution, a court was some time after erected, for the trial of common pleas and controversies among the subjects, called the Court of Common Bench or Common Pleas, and fettled at Westminster, where it still continues 25. But as new institutions are not brought to perfection at once, many persons, for several years after the erection of this court, brought their common pleas into the exchequer, which gave occasion to the following statute, A. D. 1300: "No common pleas shall " be from henceforth holden in the exchequer, contrary to the form of the Great Charter 26.39 This court, at its first institution, consisted only of three judges 27.

Court of kings-bench.

About the same time the court of king's bench was erected for the trial of criminal actions and pleas of the crown, which, as well as common pleas, had formerly been held in the exchequer.

²³ See vol. 6. chap. 3. p. 22-28. 24 Id. ibid. p. 397.

²⁵ Dugdale's Origines Juridicales, ch. 18. p. 38.

Though the persons who were summoned to attend this court, were commanded to appear (coram ipso rege) before the king himself; the advantages of its remaining at a known and convenient place, were fo many and obvious, that it continued to fit almost constantly at Westminster, except a few short occasional removes 28. A statute was indeed made, A.D. 1300, that the justices of the king's-bench should always follow him, that he might have some sages of the law near him at all times 29. But this statute doth not seem to have produced any great or permanent effect. the duty and prerogative of the judges of this high court, from its first institution, " to correct 66 the injuries and errors of other courts and " judges "."

The most important institutions are sometimes Chancery, introduced by such slow and imperceptible degrees, that it is next to impossible to point out their origin. This seems to have been the case with respect to the court of chancery, as a supreme court of review and equity. When the aula regis or king's court slourished in its ancient undivided dignity, the chancellor sat as a judge in it, with the high justiciary, and other great officers of the crown; and after the courts of the king's bench and common pleas were erected, he continued to sit as one of the judges in the exchequer; but it

28 Dugdale, p. 38.

3º Bracton, l. 3. c. 10.

doth

doth not appear, that in this reign he had any diftinct court or jurifdiction of his own 31.

Exchequer. As the establishment of the courts of the king'sbench and common pleas very much diminished the business, it also impaired the power and dignity, of the exchequer, which was very much confined, as a court of law, to the trial of such causes as respected the revenues of the crown, or its own officors and dependents 22.

These courts fometimes removed.

Though the courts of exchequer, king's-bench, and common pleas, were for the most part settled at Westminster in this reign; they were sometimes removed to other places, that they might be near the king, when he was engaged in the wars of Wales and Scotland. In the 6th and 11th of Edward I. they were removed to Shrewsbury; in the 26th to York; and in the 21st the court of king's-bench sat at Roxburgh in Scotland 33. But the inconveniences which attended these removes were so scalingly selfs frequent.

Justices of affize.

By the statte, commonly called Westminster the second, chapter 30, A. D. 1285, justices of assize and nisi prius were appointed to go into every shire, two or three times a year, for the more speedy administration of justice 14. As these justices of assize were also judges in the courts at

Westminster, they performed their circuits into the country in the times of the vacations of these By another statute, A. D. 1299, the justtices of affize are appointed to be justices of gaoldelivery in all places on their circuits 35.

But all these courts and judges were not fuffi. Juffices of cient to prevent the commission of many atrocious baston. crimes, and to keep his subjects in that peace and good order which Edward I. defired. view to put a stop to the perpetration of such crimes, by the fevere and speedy punishment of those who were guilty of them, he appointed a kind of civil inquisitors, and sent them into different parts of the kingdom, with commissions to try and punish all murderers, incendiaries, robbers, and thieves, all who beat and wounded jurymen, or others, out of malice, with all who hired, affifted, and protected them, &c. &c. These commissioners, who were commonly called justices of traile-basson, executed their commission with much spirit, put many of these audacious criminals to death, and obliged others to abandon their country to avoid the same fate 36.

To fuppress riots and tumults, to punish fmall Justices of offences, and determine lesser controversies, and particularly to execute the decrees of the parliament of Winchester, this wise prince appointed confervators or justices of the peace in every county; but at the same time he abolished the

³⁵ Statutes, vol. 1. p. 135.

office of high justiciary, as invested with too much power to be intrusted in the hands of any subject 37.

Trial of the judges.

Edward I. not only made these salutary changes in the courts and magistrates, but he watched over them with great attention, and punished them when they were guilty of flagrant injustice or op-At his return from France, where he pression. had refided three years, great complaints were made to him of the rapacity and extortions of the To examine these complaints, he called a parliament at Westminster, A.D. 1200, which all the judges being tried, were found guilty (except two) and feverely fined. Sir Thomas Wayland, chief justice of the common pleas, appearing the greatest delinquent, was banished, and his whole estate confiscated 35. This transaction was exceedingly popular, and productive of the best effects.

Statute

Several excellent statutes were made in the reign of Edward I. which contributed not a little to the melioration of the constitution, and the more regular administration of justice. It was on account of these wise and goods laws, that sir Edward Coke gave this prince the title of the English Justinian. Some of these statutes respected the church, and were intended to set bounds to the power of the pope, the riches of the clergy, and the encroachments of the spiritual

³⁷ Spelman Gloff. voc. Justiciarius.

⁹⁸ Chron. T. Wikes, p. 118. Chron. Dunstap. an. 1290. Ryley's Placita Parliament. p. 451.

Others of them were calculated for excourts 39. plaining, confirming, and enlarging the liberties which had been granted by the great charter, and the charter of the forests; and particularly for restraining the crown from imposing taxes without the confent of parliament 40. Very prudent regulations were made by the statute of Winchester, for ordering the internal police of the country, and preventing thefts and robberies; and the statutes of Acton-Burnel, and De Mercatoribus, contain regulations no less prudent, for the encouragement of trade .* But for a more perfect knowledge of the many excellent laws that were made in this reign, the reader must be referred to the statute book, and the works quoted below 42.

It is impossible to give a better description of common the great improvements that were made in the law. common law of England, in the reign of Edward I. than in the following words of fir Matthew Hale: "Upon the whole matter it appears, " that the very scheme, mold, and model of the common law, especially in relation to the admi-" nistration of the common justice between party ee and party, as it was highly rectified, and fet in er a much better light and order by this king, than his predecessors left it to him, so in a very " great measure it has continued the same in all "fucceeding ages to this day; fo that the mark

³⁹ Statutes, vol. 1. p. 72. 118. 160.

⁴º Id. ibid. p. 131. 139. 156. 41 Id. ibid. p. 75. 112. 115. 42 Coke's Institutes, Blackstone's Commentaries, Barrington's Observations, Hale's Hist. C. L.

"or epocha we are to take for the true stating of the law of England, what it is, is to be confidered, stated, and estimated, from what it was when this king left it. Before his time it was in a great measure rude and unpolished, in comparison of what it was after this reduction thereof; and on the other side, as it was thus polished and ordered by him, so hath it stood hitherto, without any great or considerable alteration 43."

Prerogatives of the crown.

The prerogatives of the crown were fo unfettled in the times we are now confidering, that they depended very much on the character and capacity of the prince who wore it. Henry III. being a weak prince, was at some times deprived almost of all authority by his too powerful barons; but his fon and fucceffor Edward I. supported the dignity and prerogatives of his crown with greater vigour, and repelled the attacks that were made upon them with spirit. Of this it will be sufficient to give one example. When the barons demanded, A.D. 1301, that the great officers of the crown should be named by parliament, the king returned fuch a fierce denial, as struck terror into those haughty chieftains, and brought them to beg his pardon for their prefumption 4. The truth is, this prince was too fond of power, and pushed his prerogatives beyond the limits which had been prescribed by the charters. For ex-

44 Parliament. Hift. vol. 1. p. 118.

⁴³ Hale's History of the Common Law, p. 162, 163.

ample, it was stipulated by the 12th article of the Great Charter,—" That no scutage or aid shall 66 be imposed, except by the common council of " the kingdom "." But Edward paid little regard to this article, and extorted money from his fubjects on many occasions, by his own authority *6. By the 30th article of the same charter, no freeman was to be imprisoned but by the regular course of law 47. But there is the clearest evidence, that Edward and his ministers imprifoned many persons, and detained them long in prison, on mere suspicion or ill-will. Of this the archbishop of Canterbury made the following complaint in parliament A.D. 1290: "That very many freemen of the kingdom had, without any guilt on their part, been committed by the 46 king's ministers to divers prisons, as if they had been flaves of the meanest degree, therein to " be kept: of whom some died in prison, with "hunger, or grief, and the weight of their chains. From others they extorted, at their pleasure, " infinite fums of money for their ranfoms 48." In a word, it was declared publicly from the bench by the ministers and judges of this prince, "That, for the common utility, the king was, in many cases, above the laws and established customs of "the kingdom ":" a dangerous maxim, hardly compatible with a free and legal government.

History of the charters.

These observations sufficiently account for the extreme reluctance of Edward I: to confirm the great charter, and the charter of the forests. reluctance appears to have been fo great, that nothing but necessity could have overcome it. Nor was he involved in this necessity till the 25th year of his reign, A.D. 1297, when being at war with France and Scotland, and in the greatest distress for money to carry on these wars, a powerful party of the English nobility, headed by the two great earls of Hereford and Norfolk, positively refused to follow him into Flanders, complained bitterly of his illegal exactions, and loudly demanded the confirmation of the charters, which had been fo long neglected. Edward used every art to allay this rifing storm; but finding this impossible, and dreading a rebellion in England while he was in Flanders, he gave a commission to his son prince Edward to call a parliament, for the redress of grievances, and confirmation of the charters; which were accordingly confirmed with great folemnity, October 10, in full parliament at London 50. The statute of confirmation being transmitted to the king, he gave his affent to it under the great feal, at Ghent, November 5. After his return into England he confirmed these famous instruments, March 8, A. D. 1299, in a parliament at London; and again in another parliament at the same place, March 16, A. D. 1300;

and finally in a parliament at Lincoln, February 14, A. D. 1301 51. At each of these confirmations new devices were invented to render these admired inestimable charters (which contributed so much to establish and ascertain the liberties of England) more public, facred, and inviolable 52.

Though Edward I. was an excellent economist, Revenues the almost incessant wars in which he was engaged involved him in expences which his stated revenues could not support. To supply this deficiency, he made frequent and commonly successful applications to his people in parliament 53. But on some occasions he had recourse to more unjustifiable methods of replenishing his coffers. From the Jews he extorted prodigious fums of money at different times; and at last he seized the whole possessions of that devoted people, banishing the owners out of the kingdom 54. Though he was really a friend to trade, yet when his want of money was great and urgent he sometimes made too free with the cash and goods of merchants. Before his departure on his expedition into Flanders, A. D. 1207, he seized great quantities of wool and leather belonging to the merchants, for no other reason, but that it was the most speedy and effectual means of procuring money 55.

⁵² See Judge Blackstone's most correct and valuable History of the Charters, p. 92-115.

⁵³ Parliament. Hift. vol. 1. p. 136.

⁵⁴ Walfing. p. 54. Heming. vol. 1. p. 20. Trivet, p. 266. 55 Walfing. p. 69. Trivet, p. 296. Heming. vol. 1. p. 52.

fame time he took by mere force, whithout any other plea but that he had need of them, immense quantities of corn, and great multitudes of cattle. for the use of his army 36. Nor did this prince abstain from laying violent hands on the property of the church, however facred it was then esteemed. At one time he feized all the money and plate in the monasteries and churches; and at another, all the possessions of the clergy, for refusing to grant him a subsidy 57. These acts of tyranny and oppression will hardly appear credible in the present age. But nothing was more difficult than to teach even the best and wisest of our ancient kings this plain fundamental principle of the constitution,---That they had no right to the property of their subjects, unless it was granted to them by parliament.

Wales.

EDWARD I. made great efforts to reduce the whole island of Britain into one kingdom, governed by the same sovereign, and subject to the same laws. With respect to Wales he succeeded in his design. After he had accomplished the conquest of that country by the force of arms, he was at preat pains to gain a perfect knowledge of its ancient constitution and laws, and of the manners of its inhabitants. With this view, he gave a commission to the bishop of St. David's and others, to investigate these matters in the most careful and authentic manner. No fewer than one

⁵⁶ Heming. vol. 1. p. 110, 111.

⁵⁷ Walfing. p. 65. Heming. vol. 1. p. 107.

hundred and seventy-two of the most respectable and intelligent persons were examined upon oath, by these commissioners, who, upon their evidence, sormed a report. Having obtained this necessary information, he held a parliament at Rhuydland in Flintshire, May 24, A. D. 1282, and in it united Wales to the kingdom of England, and introduced into it as many of the English laws, customs, courts, and magistrates, as he thought convenient at that time.

EDWARD was not so successful in his designs scotland. upon Scotland, though the acquisition of that kingdom seems to have been the favourite wish of his heart, during the last twenty years of his life. His first scheme for uniting the two British kingdoms, by the marriage of his eldest fon prince Edward, to Margaret of Norway, heiress of the crown of Scotland, was just and honourable; but it was unhappily defeated by the death of that princels. The various methods of art and force. which he afterwards employed for accomplishing this end, have been already related: other means, he endeavoured to introduce the English laws, customs, and modes of judicial proceedings, into those parts of Scotland where his power prevailed. "It feems very evident (fays " fir Matthew Hale), that the defign of Ed-" ward I. was by all means possible to unite the

See Leges Walliæ, Append. Judge Barrington's Observat. p. 90. See Statutum Walliæ, in the Statutes at Large.

kingdom of Scotland, as he had done the prin-" cipality of Wales, to the crown of England, fo " that Britain might have been one entire mo-46 narchy, which could never have been better " done, than by establishing one common law and " rule of justice among them; and therefore he "did, as opportunity and convenience ferved, " translate over to that kingdom as many of our " English customs and laws as within that compass " of time he conveniently could 60." Edward's efforts to unite Scotland to England finally failed, they ferved only to kindle a most violent and implacable animofity between the people of these two kingdoms, which gradually rendered their manners, laws, and customs, more diffimilar than they had been in more ancient and amicable times.

SECTION III.

Changes in the Constitution, Government, and Laws of Britain, from the accession of Edward II. A.D. 1307, to the accession of Edward III. A.D. 1327.

FEW characters were more different than those of Edward I. and of his son and successor Edward II. The last of these princes being a weak indolent voluptuary, without talents for war, po-

^{. 60} Hale's Hift. C. L. p. 204.

litics, or legislation, was the property of worthless, greedy favourites, to whom he abandoned both the treasures and government of his kingdom. In this reign we cannot expect to meet with great improvements in the constitution, government, and laws; and therefore on these heads it merits very little attention.

The constitution of parliament became gradually more fettled and uniform in the course of this reign; though its meetings were fometimes very tumultuary, occasioned by the violent animosities of the contending parties. When a parliament was most full and general in this period, it confifted of the following classes or orders of men,all the archbishops, bishops, abbots, priors, deans, archdeacons, two representatives from the chapter of each cathedral, and two representatives of the inferior clergy of each diocess,-all the earls and greater barons, with the judges, and all the members of the king's council, both of the clergy and laity, two knights from each county, and two citizens from each city, and two burgeffes from each burgh. The first parliament in this reign, which met at Northampton October 13, A. D. 1307, was constituted in this manner. The expences of all who were called to this parliament as reprefentatives of the clergy, as well as of the laity, were borne by their constituents 2. The clerical representatives possessed the singular privilege of substituting others in their room, when it was not

Constitution of parliament.

Dugdale's Summons, p. 56. Hody's Hift. Convocat. p. 391.

convenient for them to attend. But all the parliaments of this reign were not so full and general as the first; for we find that to some of them the deans, archdeacons, and the representatives of chapters, and of the inferior clergy, were not furnmoned. In a word, the two first Edwards, and their ministers, seem to have modelled their parliaments as best suited their particular views. When they defigned to ask the advice, or demand the pecuniary affistance, of all the different orders of their subjects, they called a general parliament; but when they wanted only the counsel and contributions of their prelates and barons, who possessed the far greatest share both of the power and riches of the kingdom, they called only a particular parliament, confisting of these prelates and barons. This not only appears probable, from an attentive confideration of the circumstances in which these different kinds of parliaments were called; but is directly afferted to have been the case, by an archbishop of Canterbury, who flourished in those times, in a letter to the pope:- "It is the custom of the kingdom of Eng. " land, that in those public contingencies which " affect the state of that kingdom, the counsel of " all who are particularly concerned is required '." The inferior clergy, and the inhabitants of cities and towns were so poor, and contributed so little to tenths and fifteenths, that sometimes no de-

² Hody's Hist. Convocat. p. 389.

⁴ Id. p. 390.

⁵ M. Westmonst. an. 1301. p. 439.

mand was made upon them, and then they were not required to fend representatives to parliament. The twentieth, for example, that was granted in the first parliament of Edward II. by the earls, barons, and knights, amounted, in the county of Bedford, to 720l. 12s. 7d.; while the fifteenth, granted by the citizens and burgeffes, produced in all the towns of the fame county, 311. 18s. 41ds. Nor did the towns bear much higher proportion to the counties in other parts of England. But as cities and towns increased in wealth, their contributions to the public expences, and their importance in other respects, became more confiderable; and then they were constantly called upon to send their representatives to parliament, in which they foon acquired a much greater influence than the counties, by their fuperior numbers.

The parliament of England doth not appear to Parlia. have been statedly divided into two houses in this reign; though each of the several orders of which it confisted, occasionally retired and consulted apart fes. about its own particular concerns. In these separate confultations, the knights of shires commonly, if not constantly, fat with the earls and barons, as having been originally of the same order; and always granted the same proportion of their goods with the earls and barons. The representatives of cities and burghs, who were really citizens and burgesses, inhabitants of the places

yet divided into

⁶ Carte, vol. 2. p. 308. from the Rolls in the Pipe office.

which they represented, formed one body, and held consultations about the affairs of trade, and about granting aids to the crown; and they commonly granted a greater proportion of their moveables than the earls, barons, and knights, because they owed their establishment and franchises to the crown, and depended upon it for further immunities 7.

Clergy in parliament nearly equal to the laity.

The clergy were nearly equal to the laity in number, as well as in wealth and dignity, in the parliaments of England in this period. The bishops, abbots, and priors, corresponded to the earls and barons, and were also summoned in the fame manner, by a particular writ directed to each of them: the deans and archdeacons corresponded to the knights of shires, and were summoned by the bishop, as the knights were by the sheriff of the county: and the representatives of the chapters of cathedrals, and of the inferior clergy, who were called the fpiritual commons, corresponded to the representatives of cities and burghs. The clergy also granted their own money in parliament, and fometimes in a different proportion from the Thele circumstances, and some others, made the favour of the clergy an object of great importance to the prince, in the times we are now confidering.

Courts.

"It feems," fays a learned historian of the law, that the certain fixing of the court of common-

⁷ Carte, vol. 2. p. 246-260.

Bugdale's Summons, p. 92, &c. Pryn. Parl. Writ. vol. 2. P.77

Rights of an English Convocation, p 32, &c.

or pleas at Westminster, occasioned much more es resort thereto than before; for about the bees ginning of Edward II.'s reign there were so er many fuits therein, as that the king was necesse fitated to increase the number of his justices, who were to fit there, unto fix, which commonly were not above three before that time; " and so to divide them, that they might sit in "two places"." The judges in this court were afterwards increased to seven, and at last to nine; though they have long fince been reduced to four, who fit all in one place. In proportion as the business of the court of common-pleas increased, that of the exchequer, in which these pleas had formerly been tried, declined". The members of the king's council still continued to possess great judicial powers, and acted as barons of the exchequer, as well as determined many causes in the last resort, which could not be overtaken by parliaments in their short sessions 12.

Few statutes of lasting utility or great import. Statute ance were made in the turbulent unhappy reign of Edward II. By the ancient common law of England, breaking prison was a capital crime, even though the person had been committed for a slight offence. The unreasonable severity of this law or custom was corrected by a statute made in a parliament at Northampton, 1st Edward II. A. D. 1307, which decrees,—" That none from

²⁰ Dugd. Origin. Jurid p. 39. 11 Madox, Hift. Excheq. p. 548. Madox. Hift. Excheq. p. 565. &c.

"henceforth that breaketh prison shall have judgment of life or member, for breaking prison
only, except the cause for which he was taken
and imprisoned did require such judgment, if
he had been convict thereupon according to the
law and custom of the realm, albeit in times
past it hath been used otherwise." The
prices of provisions of all kinds being very high
A. D. 1314, parliament attempted to reduce and
fix them at a certain rate by law; but that law
produced a famine, and was soon repealed.

Common law. The common law, when it could be exercised, continued in the same improved state to which it had attained in the preceding reign 15. But the regular administration of justice was frequently interrupted by civil broils; and the rage of party was sometimes so violent, that several noble perfons were deprived of their fortunes, and even of their lives, without so much as the pretence or form of a trial.

Prerogatives of the crown.

The limits of the prerogatives of the crown, and the privileges of the people, were in this period fo unfettled, that they depended very much on the personal character of the king. As Edward II, was a weak prince, he was soon deprived of the most essential prerogatives of his crown, and, in the third year of his reign, compelled, by a powerful faction of his barons, to give a

³³ Statutes, vol. 1. p. 164.

¹⁴ Parliament. Hift. vol. 1. p. 151. 153. Walfing. an. 1314.

¹⁵ Hale's Hift, C. L. ch. 8. p. 166.

commission to twelve great men, named by parliament, to govern both his kingdom and his household with unbounded sway 16. By this commission the royal authority was almost annihilated, and a tyrannical aristocracy established. This, like every other violent breach in the constitution, produced much confusion and misery for feveral years; the barons labouring to preserve the power they had gained, and the king to re-- cover the authority he had lost. In the mean time, the people suffered all the distresses arising from anarchy and civil discord, aggravated by famine, and the destructive incursions of the Scots. The king, after a struggle of twelve years, was restored to all the prerogatives of his crown, by his victory over the earl of Lancaster and his confederates at Boroughbridge, A. D. 1322. For foon after that victory a parliament was held at York, in which all the ordinances which had been made by the twelve commissioners, and for the support of which the confederated barons had taken arms, were repealed,-- " because by the st things which were ordained, the king's power " was restrained in many things, contrary to " what was due to his feigniory royal, and con-" trary to the state of the crown "7." But this weak unfortunate prince, about five years after this, was deprived, first of his crown, and afterwards of his life.

¹⁶ Ryley, Placit. Parliament. p. 526. 529.

¹⁷ Parl. Hift. v. 1. p. 176.

Revenues.

The hereditary revenues of the crown of England, which at the accession of Edward II. were very great, were in a little time very much diminished by his unbounded liberality to his worthless infatiable favourite Piers Gavaston 18. By the same means, all the money which had been provided by his father for the relief of the Holy Land, and for the expedition against Scotland, was confumed, and he was reduced to a state of indigence very unbecoming the royal dignity. In the course of his reign, particularly after the destruction of the earl of Lancaster and his party, many great estates came to the crown, and he also obtained several tenths and fifteenths from parliament. But all these estates and sums of money were lavished on his favourites, especially on the two d'Espensers. It must however be acknowledged, that this misguided prince never attempted to supply his wants, which were often very pressing, by imposing tallages or taxes of any kind without consent of parliament. But there is some reason to suspect, that this abstinence was rather owing to want of power, than to a conscientious regard to the constitution.

Confliretion, &c. of Scotland, As foon as the rehowned Robert Bruce found himself firmly feated on the throne of Scotland, by the decisive victory at Bannockburn, he began to think of re establishing order, and the regular administration of justice in that unhappy kingdom, which had long been a scene of the most deplorable

¹⁸ Rymer, vol 4. p. 90, 91.

anarchy and confusion. With this view he held a parliament at Scone; A.D. 1319, confishing of the bishops, abbots, priors, earls, barons, and other noblemen of his realm 19. In this parliament a capitulary, or collection of statutes, confifting of thirty-four chapters, was formed; in which there are many things remarkable. The nineteenth law, which is for nourishing peace and love, recites, that from the death of king Alexander there had been great discords and animosities among the nobles of the realm; and therefore, to put an end to these, and to nourish peace and love, it is defended and forbidden, that one nobleman do any hurt to another, or to any of his men 20. By the twentieth law, such as invent or spread rumours which may occasion discord between the king and his people, are to be imprisoned during the king's pleasure 21. Another system of laws. confisting of thirty-eight chapters, was formed in a parliament at Glasgow, A.D. 1325. By the thirty-third chapter of these laws, it appears, that the enmity between the clergy and laity was fo great, that they were not admitted to be witnesses against each other in a court of justice 22. By the twenty-fixth statute, very great precautions are directed to be taken, to prevent a woman who pretended to be with child at the death of her husband, from imposing a supposititious child on his family. She was immediately to be committed

¹⁹ Regiam Majestatem, p 339. ²⁰ Id. p. 344. ²¹ Id. p. 345. ²² Id. p. 368.

to the cultody of a matron of undoubted integrity. When within a month of her delivery, she was required to invite the friends of her late husband to come and live with her during that month. foon as her pains began, guards were to be placed at the door of her house, with orders to search · every person who defired admittance. Three candles were to be burning in the room all the time she was in labour; and as soon as the child was born, it was to be exhibited to the view of the friends of the family 43. Many of the laws in both the capitularies of Robert I. are evidently borrowed from English statutes of Henry III. and Edward I.; and some of them are transcribed almost verbatim 24. This is a proof both of the wildom and magnanimity of Robert Bruce, who did not disdain to borrow useful regulations from his greatest enemies.

The parliament of Scotland, in the former part of this period, appears to have been constituted according to the model of the English parliament in the Great Charter of king John. Burgesses were introduced into that parliament, which was held by Robert I. in the abbey of Cambuskenneth, in July A. D. 1326, which consisted of the earls, barons, burgesses, and all the other freeholders of the kingdom, who granted that illustrious prince, for his whole life, the tenth part of the rents of all

²³ Regiam Majestatem, p. 366.

²⁴ Compare Westmiust 3d stat. vol. 1. p. 122. with 2d stat. Robert I. ch. 24.

their lands, according to the old extent of their lands and rents in the time of Alexander III. in confideration of the great diminution of the lands and revenues of the crown, in the course of the long war, and of the great things which the king had done and fuffered for preferving the independency of the kingdom 25. It is remarkable, that none of the clergy are mentioned as being present in this parliament, though in the record it is called a full parliament. This makes it highly probable, that the clergy had a convocation about the same time, for the purpose of making a similar grant. In a word, there was still a very great resemblance between the laws of the two British kingdoms, though they had been many years in a state of the most violent and fierce hostility.

SECTION: IV.

Changes in the Constitution, Government, and Laws of Britain, from the accession of Edward III. A. D. 1327, to the accession of Richard II. A. D. 1377.

N the long and glorious reign of Edward III. feveral important changes were made in the constitution, government, and laws of England, which merit our attentive confideration.

As the parliaments of England have been the guardians of its liberties, the framers of its laws, ments.

the imposers of its taxes, the great counsellors of its kings, and the supreme judges of the lives and properties of its people, in every age, the state of those illustrious assemblies, their constituent members, and other circumstances, claim the first and chief attention of all who wish to trace the history of the constitution with any degree of accuracy.

very frequent. Edward III. appears to have been fond of parliaments, and never neglected to confult them on any affair of importance. By this means that wife prince obtained the best advice, and most hearty concurrence and support, of his subjects, in his arduous undertakings; which were generally crowned with success. His writs of summons to no fewer than seventy parliaments and great councils, are still extant; and assorbed a sufficient proof of his fondness for those assemblies, and that he called a far greater number of them than any other king of England.

Parliaments and great councils.

The distinctions between parliaments and great councils still subsisted; and Edward III. called sometimes the one, and sometimes the other, as the state of his affairs required. When he desired only the advice and assistance of his great barons, who still possessed the far greatest part of the power and property of the kingdom, he called a great council, consisting of all the great men, both of the clergy and laity, who held of the crown by barony, and were intitled to a particular summons. When he stood in need of the counsel

Dugdale's Summons to Parliament, p. 139-292.

² Ibid.

and aid of all his fubjects, he called a full parliament, which confifted, not only of the barons, spiritual and temporal, but also of the representatives of the inferior clergy,—of the smaller barons, or freeholders,—and of the citizens and burgeffes of the kingdom; and those representatives of the clergy and laity below the rank of barons, were called the spiritual and temporal commons. But as parliaments possessed greater authority in granting fupplies, making laws, and in all other things, than great councils, they were more frequently called 3.

The number of representatives sent to parlia-Number ment by each county, city, and borough, in this fentatives. reign, was not invariably fixed. Only one reprefentative from each city and borough was fummoned to the parliament which met at Westminiter 26th Edward III.; and only one knight from each county was summoned to that which met the year after at the same place, though two representatives from each city and borough were called to this last. At length the general rule of fending two members from each county, city, and borough, was fo uniformly observed, that by custom it became a law.

The number of towns and boroughs which fent members to parliament, in the times we are now confidering, was still more unfixed and variable. This feems to have depended very much on the

³ Dugdale's Summons to Pariament.

^{4&}quot;Brady's Introduct. p. 158. 160.

sheriffs of the several counties to whom the king's writ was directed, commanding them to cause a certain number of citizens (most commonly two) to be elected for each city, and of burgesses for each borough, within their counties. officers the people of small towns and boroughs, who were unable or unwilling to pay the wages of their representatives, frequently applied; and many of them, by one means or other, were excused or overlooked's. In general, the representatives of cities and boroughs were much fewer in this period than they are at present 6. It is obvious, that this unsettled state of parliaments added much to the authority and influence of the crown in those affemblies; and we learn from history, that this influence was fometimes employed in packing parliaments for the most pernicious purposes; particularly by the queen-mother, and her favourite Mortimer, in the beginning of this reign 7.

Parliament divided into three bodies.

It is perhaps impossible to discover the precise time when the parliament of England was divided into the two houses of lords and commons, meeting statedly in different places, and forming two great and distinct assemblies. None of our ancient historians give any account of this event, so remarkable in itself, and productive of so many important consequences; nor is there any law con-

⁵ Brady of Boroughs, p. 54. 59.

⁶ Bishop Ellys's Tracts, vol. 2. p. 123.

⁷ Rym Feed. t. 4. p. 453.

Ch. 3. § 4. CONSTITUTION, &c.

cerning it in the statute-book. It is highly probable, that this custom of meeting in two separate chambers was intoduced almost insensibly, and established without much noise or observation. It hath been already observed, that in the two preceding reigns the several orders of men of which the parliament confisted, sometimes retired into separate rooms, and deliberated by themselves about affairs in which they were particularly concerned. This practice, we may prefume, being found convenient in many respects, became gradually more and more frequent, till at length it fettled into a custom. At first, the parliament commonly divided into three bodies for their feparate deliberations; the clergy forming one of these bodies; the earls, barons, and knights of shires, another; and the citizens and burgesses a Of this, if it were necessary, many examples might be given. When Edward III. asked the advice of his parliament, which met at Westminster March 12, A. D. 1332, about the most effectual means of suppressing certain audacious bands of robbers which infested several parts of the kingdom, the prelates and proctors of the clergy went apart to confult by themselves, the earls, barons, and knights of shires, by themfelves, and the citizens and burgeffes by themselves. After some time had been spent in these separate confultations, the whole parliament reassembled, received the reports of these several bodies, and out of them, by common consent, one general advice

advice was formed, and presented to the king. The same method of proceeding was followed when the crown demanded supplies. The demand was made in full parliament; on which each of these three bodies deliberated separately, and fettled the proportion of their goods or money which they proposed to grant. This is the reason that the grants of these several bodies are not only in different proportions, but sometimes even of different kinds, one body granting a certain proportion of their corn and cattle, another a certain quantity of their wool, and a third a certain fum of money 10. While the separate consultations of these different bodies were only occasional, it doth not appear that the citizens and burgesses (who may be faid to have constituted the house of commons) had any common speaker, settled and chosen for the whole fession or parliament; but they probably chose one at each consultation.

Proctors of the clergy no longer members of parliament. As the above plan of parliament was not agreeable to many of its members, it was not of long duration. The inferior clergy, in particular, were much displeased with this system, because they knew that they were compelled to send their proctors to parliament, with no other view than that they might be prevailed upon, by the presence and authority of the laity, to make more liberal grants of money to the crown than they would have done in convocation. They laboured, there-

⁹ Dugdale's Summons, p. 167. Rights of Convocat. p. 58. Par-Kament. Hift. vol. 1. p. 213, &c. Did. ibid. p. 330.

fore, with the greatest earnestness, to procure exemption from fending their representatives to parliament; and at length succeeded. For it plainly appears, from the records of the parliament which met at Westminster April 23, A. D. 1341, that none of the clergy were members but fuch as held of the king by barony, i. e. archbishops and bishops; and some of the richest abbots and priors ". The crown, it is true, did not then, or even for feveral reigns after, formally renounce the right of calling the proctors of the inferior clergy to parliament, but only connived at their absence, and permitted them to grant their money in their convocations without mingling with the laity. These convocations were commonly held at the fame time, and in the same city, with parliaments; and fo strict an intercourse was kept up between these affemblies, that many things done by the clergy in convocation were reported in parliament 12.

The union between the great barons and the knights of shires in their private consultations, was not very natural, as the former sat in their own right, and were accountable to none for their conduct, and the latter sat by election, and were certainly bound to have a particular concern for the interests, and even some respect for the sentiments, of their constituents. The inconveniency of this appeared in the parliament which met at Westminster October 13, A. D. 1339, and no doubt on other occasions. When the barons and knights

The eftabliftment of the houfes of lords and commons-

H Hody Hilt. Convocat. p. 411, 412.

¹² Id. p. 412-131.

of shires in that parliament consulted together, about an aid to be granted to the king, the barons were willing to give their tenth sheaf, sleece, and lamb; but the knights declined giving so large a grant till they had consulted their constituents; which occasioned a delay very fatal to the king's This union between the barons and knights feems to have been dissolved about that time. For the king having called a parliament to meet at Westminster April 23, A. D. 1343, sent fir Bartholomew Burghersh to ask their advice, whether he should make a peace with the king of France under the mediation of the pope, or not? And fir Bartholomew, having proposed this question to the whole parliament, defired the prelates and barons to deliberate upon it among themselves, and also defired the knights of counties and commons to affemble in the painted chamber; and confult about the same matter; and both to meet in full parliament on Thursday May 1, and report their advice 13. On this occasion we find the two houses of lords and commons completely formed: the first composed of all the clergy and laity who held of the crown by barony, and were fummoned by particular writs directed to each member; the fecond, of the representatives of all the smaller barons, citizens, and burgeffes: an excellent institution, which hath continued, with some short interruptions and fmall variations, through more than four centuries.

³³ Parliament. Hift. vol. 1. p. 251.

This permanent division of the parliament into Happy effects of the two houses of lords and commons was attended with many advantages, and contributed more than any other event to the improvement of the constitution. Each of these houses consisting of much fewer members than the whole parliament, and these members being nearly of the same rank in fociety, their deliberations were conducted with greater calmness and regularity. The commons, being no longer under the eye of potent and haughty barons, in whose presence they hardly dared to speak, took courage, and gradually · acquired greater weight and influence. underwent the examination of two distinct affemblies, jealous of each other's power, and watchful over each other's conduct, before it was prefented to the king for his affent. Each of the two houses was a check upon the other; by which neither of them was permitted to encroach on the privileges of the other, or on the prerogatives of the crown. In a word, by this happy division of the parliament of England into the two houses of lords and commons, with the king at their head, the rights of all ranks of people were fecured, and the English constitution acquired the peculiar advantages of the three most famous forms of government, monarchy, aristocracy, and democracy, without their disadvantages. This is one part of the policy of England, which Scotland, to its unspeakable loss, never imitated.

It required a confiderabletime to bring the union of the knights of shires with the citizens and bur-

Vol. VIII.

this establishment.

the knights and com. gestes mons.

geffes to perfection. Many years after they were united, the members of the lower house of parliament were constantly denominated, " the knights " of shires and commons;" and the former were reputed of a higher order in fociety than the latter, who were really inhabitants of the cities and boroughs they represented 14. On fome occasions. the knights of shires, having finished their business, were difmissed, when the citizens and burgesses were detained in order to lay imposts upon certain goods, and to regulate the affairs of trade, which was confidered as their peculiar province 15. they might be properly qualified for doing this, this king, in his writs of fummons, fometimes directed cities and boroughs to elect fuch of their members to represent them as were the most expert mariners or most intelligent merchants 16. But by degrees all these distinctions vanished, and cities and boroughs were represented by gentlemen of the best families and greatest fortunes in the kingdom.

Humility
of the
commons.

After the knights, citizens, and burgeffes, were united into one affembly, and formed the lower house of parliament, they treated the prelates and great barons, who formed the other house, with the greatest respect and deference, on all occasions, and seemed to entertain very humble thoughts of their own power and political abilities. When matters of great moment, or of great difficulty,

⁴ Parliament. Hift, vol. 1. passim.

¹⁵ Id. p. 313.

¹⁶ Id. p. 314.

came before them, they commonly applied to the lords, and petitioned, that certain prelates and barons might be allowed to come to them, and affift them with their advice 17. In these meetings of the commons with a committee of the lords, the nature and quantity of the supplies to be granted to the crown were ordinarily fettled, and afterwards reported in full parliament.

The parliaments of this period, in regulating the fupplies, fometimes betrayed a degree of ignorance ment. of the state of their country; which would be perfeelly incredible, if it were not so well attested as to preclude all doubt. The parliament which met at Westminster February 24, A. D. 1371, granted the king an aid of 50,000 l. and in order to raife it, imposed a tax of 22 s. 3 d. upon every parish, supposing the number of parishes to be about forty-five thousand. But it was soon found, that they did not amount to a fifth part of that number; and confequently that the tax imposed would not have raised a fifth part of the sum granted 18: A most astonishing mistake, to be committed by fo numerous an affembly, composed of the greatest and most intelligent persons in the kingdom!

The method which was taken to rectify the mistake abovementioned was also very fingular. Instead of reassembling the former parliament, or calling a new one, the king summoned a certain number of prelates and lords, together with one

Mistake of

Singular affembly.

⁷⁷ Parliament. Hift. vol, 1. p. 315.

¹⁸ Cotton's Abridg, from the Parliament-roll, 45th Ed. III.

half of the knights, citizens, and burgesses, who had been members of the last parliament, all named by himself in his writs of summons, to meet at Winchester June 8th 19. This very remarkable assembly assumed the authority of a parliament, and raised the tax on each parish to 5 l. 10s. Such a measure would not have been thought of in a more mature and settled state of government.

Lawyers excluded from parliament.

In the days of chivalry and superstition, when disputes were more frequently determined by the fword, or by ordeals, than by law, the profession of a lawyer was neither very lucrative nor very honourable, and confequently was embraced by few men of probity and credit. This brought the profession into such disgrace, that practising lawyers were declared incapable of being chosen members of parliament, by a statute, 46th Edward III. A. D. 1272 20. But the gentlemen of that profession have long since wiped off that reproach, and recovered their place in parliament, where many of them have acted, and still continue to act, a part highly honourable to themselves and advantageous to their country.

Change in the manner of making laws. When the house of commons was completely formed, a new mode of making statutes was introduced. The commons, towards the conclusion of every session, presented, in the presence of the lords, certain petitions for the redress of grievances to the king; which he either granted, denied, or

¹⁹ Brady, vol. 2. p. 161.

²⁰ Carte Hift. from Records, vol. 2. p. 482.

delayed. Those petitions that were granted were afterwards put into the form of statutes by the judges, and other members of the king's council, inserted in the statute-roll, and transmitted to theriffs to be promulgated in their county-courts 21. But this inaccurate manner of making laws was attended with many inconveniencies; and the commons had too often reason to complain that the statutes did not exactly correspond with their They had still better reason to competitions. plain of Edward III. for repealing a statute by his proclamation, which had been made in confequence of their petitions which he had granted, on this very strange pretence,—that he had dissembled when he granted their petitions, to avoid the mischiefs which a denial would have produced 22. a word, though the constitution and form of the parliament of England was much improved, and its authority much increased, in the course of this long and glorious reign, it was still very far from that degree of perfection in both these respects to which it hath fince attained.

Many statutes were made in this period, which Statute contributed not a little to the improvement of the common law, and to the security of the rights and privileges of the people. The Great Charter was confirmed by no fewer than ten acts of parliament; and some articles of it were explained and enlarged 23. Several good laws were made for the

²¹ Hale's Hift. C. L. p. 14.

²² Statutes, vol. 1. p. 237.

³³ Statutes, vol. 1. p. 192-333.

speedy and impartial administration of justice, and against those dangerous associations which were then common, for supporting each other in their law-fuits 24; the king's prerogative of pardoning convicts, particularly murderers, which had been very improperly exercifed, was limited by various statutes 25; the institution of justices of the peace was confirmed and improved, and their powers enlarged 26; the intolerable grievance of purveyance for the king's household was mitigated 27. The statute of 25th Edward III. chap. 2. intitled, -" A declaration, which offences shall be ad-" judged treason," is certainly a wife and good law. The fame may be faid of 4th Edward III. chap. 14, "That a parliament shall be holden " every year once;" and of 36th Edward III. chap. 15, "That pleas shall be pleaded in the "English tongue;" and of feveral others, for the knowledge of which the reader must be referred to the statute-book.

Impracticable statutes. Many of the laws that were made in the reign of Edward III. and still stand in the statute-book, are become impracticable, and may be said to be repealed by those prodigious changes in the state and circumstances of the kingdom, which four centuries have produced. Such are the laws relating to the staple of wool and other goods,—the sumptuary laws prescribing the dress and diet of

²⁴ Statutes, vol. 1. p. 195. 199. 204. 210. 223, &c.

^{47.} Id. ibid. p. 202. 206. 219. 261, &c.

persons of different ranks,—the statutes which fettle the wages of labourers and the prices of provisions; and many others 28. These obsolete impracticable statutes are valuable monuments of antiquity, and ought to be carefully preserved; but the propriety of retaining them in our code of laws, which would be fufficiently voluminous without them, may be doubted.

It feems to be impossible to give a better or Common shorter account of the state of the common law in this period, than in the words of its learned historian: "King Edward III. fucceeded his father. 44 His reign was long, and under it the law was " improved to its greatest height. The judges 44 and pleaders were very learned. The pleadings

- are fomewhat more polished than those in the
- time of Edward II.; yet they have neither un-
- certainty, prolixity, nor obscurity. They were " plain and skilful; and in the rules of law,
- especially in relation to real actions and titles of
- inheritance, very learned, and excellently po-
- " lished, and exceeded those of the time of Ed-
- ward I. So that at the latter end of this king's
- " reign, the law feemed to be near its meri-

" dian 29."

Few attempts were made to deprive the crown of Prerogaits just prerogatives in the reign of Edward III. tives of the crown. The power of pardoning was indeed confined. within reasonable limits by law, which, it is

²⁸ See Statutes at Large, temp. Ed. III.

Book IV.

probable, was not disagreeable to the king; as it relieved him from importunate petitions, that were not fit to be granted. Parliament, in the fifteenth year of his reign, taking advantage of his necessities, made a bold attack on the prerogative, by demanding that on the third day of every fession all the great officers of the crown should be divested of their offices, and called to account for their conduct by parliament, and that if any of them were found culpable, they should be finally deprived of their offices and others substituted in their room. With this demand Edward found it necessary to comply, in order to obtain a large supply of money, of which he stood in the greatest need. But he foon recovered the power he had loft, by boldly repealing this act of parliament, to which he had given his affent, declaring in a proclamation, that his affent had been involuntary, and that the act in question was inconsistent with the prerogatives of the crown, which he was bound, by his coronation-oath, to maintain 30. Nor was this the only arbitrary unconstitutional action in the administration of Edward III. In spite of the Great Charter, which he had often confirmed, and of feveral other laws, he frequently extorted money from his subjects, without the consent of parliament, by his own authority 21. All the remonstrances and petitions of the house of commons could never prevail upon him, clearly and

³⁰ Statutes at Large, vol. 1. p. 237.

³¹ Cotton Abridg. p. 17, 18. 39. 47. 52, 53, &c. &c.

explicitly, to relinquish that prerogative; for in the very last year of his reign, he affirmed, in the face of his parliament, that he had a right to impose taxes on his subjects, when it was necessary for the defence of the realm 32.

The hereditary revenues of the crown of Eng. Revenues land during the whole of that period which is the crown. fubject of this book, were derived from those fources which have been described already, in the third chapter; of the third book of this work 33. Edward III. it is faid, received no less than thirty thousand pounds a-year from Ireland; and, in time of peace, it is probable he received also confiderable fums from his dominions on the continent 34. These settled hereditary revenues were abundantly fufficient for defraying all the expences of the civil government, and for maintaining the royal family in affluence and splendour; but they were far from being sufficient for supporting those long expensive wars which he carried on in France and Scotland. Those wars involved him in great debts and difficulties, and obliged him to make frequent importunate applications to parliament for pecuniary aids, as well as to employ feveral other methods neither so just nor honourable. The lustre of Edward's personal accomplishments, and great victories, rendered him so popular, that his applications to parliament for money were

³² Cotton. Abridg. p. 152.

³ See vol. 6. p. 15-18. 34-43.

³⁴ Walfing. p. 350. feldom

seldom unsuccessful; and he obtained far more frequent and liberal grants than any of his predecessors 35. To enable us to form some idea of the value of these parliamentary grants, and of the fums of money which he extorted from his fubjects by other methods, it may be proper to give a very brief account of them for one year. parliament which met February 3, A. D. 1338, granted him one half of next fummer's wool, which was collected and fold for 400,000 135. About the same time he seized all the money, jewels, and other goods, of the Lombard merchants in London; and took into his own hands all the revenues of the alien priories, and retained them twenty years; and borrowed great fums of money from feveral abbeys. That parliament granted also an additional duty of two shillings on every ton of wine imported, over and above all former customs. Another parliament met that fame year in October, at Northampton, and granted a fifteenth, befides the pre-emption of all the wool in the kingdom at a very low price; and the clergy in convocation granted a tenth for two years 37. The people of England never had greater reason to complain of taxes than in this memorable year, in which their king affumed the title of king of France: an event that proved fatal to the peace and prosperity of both kingdoms, and, amongst

³⁵ See Parliament. Hist. 36 Knyghton, col. 2579.

³⁷ Parliament. Hift. vol. 1. p. 225-228.

many evils of which it was productive, contributed not a little to multiply and perpetuate taxes.

About a year before Edward III. assumed the Title of title of king of France, he introduced a new order troduced. of nobility, to inflame the military ardour and ambition of his earls and barons, by creating his eldest son prince Edward duke of Cornwall. was done with great folemnity, in full parliament at Westminster, March 17, A.D. 1337, by girding the young prince with the fword, and giving him a patent, containing a grant of the name, title, and dignity of a duke, and of several large estates, to enable him to support that dignity 38. This high title was also conferred by Edward on his cousin Henry earl of Lancaster, and on two of his own younger fons, the princes Lionel and John, at different times, but with the same solemnities 39.

AFTER the death of king Robert I. Scotland Conftiturelapsed into a state of disorder and distress almost Scotland. equal to that from which it had been rescued by the wisdom, valour, and good fortune of that illustrious prince. The competition for the crown between the Bruce and Baliol families was again revived, and the partifans of these families alternately triumphed and were defeated. King David Bruce, who finally prevailed in this long and fatal

³⁸ Selden's Titles of Honour, p. 621. Rymer, tom. 4. p. 735. 39 Selden, p. 622.

contest, spent above nine years of his reign an exile in France, and eleven years of it a prisoner in England. It is not to be imagined, that in this unfortunate reign, which continued forty years, any great improvements could be made in the laws and government of a country in such unhappy circumstances. Two capitularies or systems of laws, which are faid to have been made in the reign of David II. are published among the ancient laws of Scotland 40; but there is good reason to suspect, that the laws contained in the first of these capitularies are not genuine. All amerciaments for delinquencies are by these laws appointed to be paid in cattle, and not in money. which was not the custom of Scotland in the fourteenth century 41. It is hardly to be supposed, that the parliament of Scotland in this period could be capable of making the following law: " It is statute by the king, that if any man kills " another man's dog unjustly, he shall watch his " dunghill a year and a day 42." Some other laws in this collection are still more abfurd. laws contained in the second of these capitularies feem to be genuine, and fome of them are of the fame import with English statutes of this period 43. But it is not probable that these laws were made, according to the title prefixed to them, " in a parse liament holden at Scone, by king David II.

⁴º Regiam Majestatem, p. 370-390. 41 Id. p. 270.

⁴² Chap. 15.

⁴⁵ Compare Regiam Majestatem, p. 382-390; with Statutes of Edward III.

[&]quot; November

"November 6, A. D. 1347." because that prince was then a prisoner in England, and a great part of Scotland had submitted to Edward Baliol. It feems to be impossible to discover with certainty at what time, and by whom, the four books of laws called Regiam Majestatem were composed and published. They are by many learned men ascribed to David II. chiefly for this reason, that they do not think it probable that they were fo ancient as David I. But this argument is evidently not conclusive; and the character given in the preface to these laws of that king, at whose command they were collected, cannot, with any regard to truth, be applied to David II 44. collection of laws made by Robert II. in a parliament at Scone, May 2, A. D. 1372, are published among the ancient laws of Scotland 45. In these statutes, the distinction between murder committed with deliberate purpole, and manslaughter committed in a sudden gust of passion, called chaudmelle, is clearly marked 46: a distinction founded in reason, and worthy of the most serious attention of all criminal judges. In the feventeenth and last chapter of these laws the members of the parliament of Scotland at that time are thus enumerated and described:- "Prelates, and " procurators of prelates, and others of the clergy, " earls, barons, and burgeffes 47." From the fame statute we learn, that the king, at the conclusion

⁴⁴ See Regiam Majestatem, Preface.

⁴⁷ ld. p. 398.

of this parliament, promised, on the word of a prince, that he would observe all the laws that had been made in it; and his eldest son, afterwards Robert III. and all the members of the parliament, both clergy and laity, took a solemn oath on the holy gospels to the same purpose 48: a sufficient proof that laws had not a proper degree of authority, when such a ceremony was thought necessary.

SECTION V.

Changes in the Constitution, Government, and Laws, of Britain, from the accession of Richard II.

A. D. 1377, to the accession of Henry IV.

A. D. 1399.

THE constitution and government of England may not improperly be compared to a ship that hath been long at sea, exposed to many violent storms, and in frequent danger of being beat to pieces. Few of those storms were more violent than that which was raised by the villains or common people in the country, A. D. 1381, and threatened the subversion of all order, law, and government. But as the history of that dangerous commotion hath been already given, it is sufficient to observe in this place, that it made no change in the constitution, and that the

⁴⁸ Regiam Majestatem, p. 398.

Walfing p. 247-279.

peafants

peasants engaged in it were reduced to the same state of depression and servitude under which they had formerly groaned 2.

The parliament of England having undergone many changes, and affumed various forms, about the beginning of this reign approached very near to that happy form in which it hath almost ever fince continued. It then consisted, as it doth at present, of the two houses of lords and commons, which regularly met, and held their deliberations in two distinct apartments.

House of lords.

The house of lords consisted of all the great men, both of the clergy and laity, who held immediately of the crown by barony, which comprehended all the archbishops and bishops, many abbots, and a few priors, who were the lords spiritual; all the dukes, earls, and barons, who were the lords temporal. Every spiritual and temporal lord received a particular fummons to every par-The justices of the king's bench and common pleas, and the members of the king's privy council, who were neither prelates nor barons, were also summoned in the same According to this scheme, the house of lords, in the first parliament of Richard II. confisted of the archbishops and bishops, twentytwo abbots, and two priors, one duke, thirteen earls, forty-feven barons, and twelve judges and privy counsellors. A greater number of abbots

² Statutes, vol. 1. p. 352. 3 Dugdale's Summons, &c. p. 293.

⁴ Dugdale's Summons, &c. p. 295. 5 Id. ibid.

and priors were fummoned to some parliaments. than to others 6. To that of 40th Henry III. no fewer than fixty-three abbots and thirty-fix priors were summoned; whereas not a fourth part of that number were called to several subsequent parliaments in this period 7. The chief reason of this great variation seems to have been this, that these prelates, in order to be relieved from the expence and trouble of attending parliaments, laboured earnestly to procure exemptions from that service, in which many of them succeeded. them who could plead that they did not hold their lands per baroniam (by barony) of the crown, were immediately exempted 8. claimed and exercifed the prerogative of calling up to the house of lords, by a particular summons to each of them, fome of the most opulent and illustrious knights, though they did not hold their lands of the crown by barony; and fuch of these knights as were regularly summoned for a confiderable time, became lords of parliament, and barons, by virtue of these writs of summons. This honour was commonly continued to their heirs, who were fummoned to parliament in the fame manner?. In this reign the custom of creating barons by patent was introduced, conferring upon the person so created, and his heirsmale, the honour and dignity of a baron by a certain title, with all the other privileges of the

peerage. Sir John Beauchamp of Holt, steward of the household to Richard II. was the first baron in England of this kind, who was created lord Beauchamp, baron of Kidderminster, by patent, A. D. 138810. At the conclusion therefore of this period the house of lords consisted of barons of three different kinds, viz.—barons by tenure, barons by writs of fummons,—and barons by patent.

The house of commons, consisting of the House of knights of shires, with the representatives of cities and boroughs, was now so completely formed, that it was found necessary to chuse one of their own members, at the beginning of every parliament, to prefide in their debates, and communicate what they thought proper, in their name, to the king and the house of lords. The member who was chosen to perform these offices was very properly called the speaker of the house of commons. Sir Peter de la More, knight of the shire for the county of Hereford, was chosen speaker by the commons in the first parliament of Richard II. A. D. 1377, and is the first upon record who bore that honourable office". At his first appearance before the king in the house of lords, at the head of the commons, he made the following protestation: "That what he had to de-" clare was from the whole body of the com-" mons; and therefore required, that if he should

" happen Vol. VIII. M

io Selden, Tit. Hon. p. 617; 618.

¹¹ Cotton Abridg. p. 155. Parliament. Hift. p. 339.

" happen to speak any thing without their con-46 fents, that it should be amended before his de-" parture from the said place"." Pickering, the fecond speaker on record, made this humble request in the name of the commons. "That if he should utter any thing to the prei judice, damage, flander, or difgrace of the "king or his crown, or in lessening the honour or estates of the great lords, it might not be " taken notice of by the king, and that the lords "would pass it by as if nothing had been said; 66 for it was the most ardent desire of the com-" mons, to maintain the honour and estate of the "king, and the rights of the crown, as also to " preserve the reverence due to the lords in all The king, by his chancellor, or c points 13." fome other great officer, made a speech at the opening of every parliament, representing the reafons of calling it, the greatest of which commonly was,-to obtain a grant of money; and this, it was infifted, should be made before they entered on any other business 14. The sum to be granted, and the ways and means of raising it, were commonly fettled in a committee of lords and commons, and fometimes even by the lords, at the request of the commons 15. still continued to grant their own money in convocation, and treated every attempt of the parlia-

³⁵ Parl. Hift. vol. 1. p. 353. 360.

Ch. 2. 65. CONSTITUTION, &c.

ment to tax them as illegal and unconstitutional 16. When the parliament at Northampton, A. D. 1386, proposed to raise one hundred shousand pounds, by a capitation-tax upon the laity, provided the clergy raifed fifty thousand, which was their just proportion, since they possessed a third part of the kingdom; the clergy, who were then met in convocation at the same place, made this haughty reply, "That their grants were never " made in parliament, nor ought to be; and that " laymen neither could nor should constrain them " in that case "." When the fupplies were fettled, the commons were permitted to present their petitions to the king in the house of lords, and fuch of them as were granted were formed into statutes, in the manner that hath been already mentioned 18.

The house of commons, even after it was fully Modelty established, acted with much modesty and diffi- house of dence, and feems to have stood in awe of the commons. king and the house of lords. Of this many examples might be produced; but the following one will probably be thought fufficient. Thomas Haxey, a clergymen, and a member of the house of commons in that parliament which met at Westminster January 22, A. D. 1397, proposed to the consideration of the house, a law for reducing the expences of the king's household, and preventing too great a number of bi-

18 See p. 148 17 Parl. Hift. p. 361.

¹⁶ Parl. Hist. vol. 1. p. 361. Hody's Hist. Convoc. part 3. p. 229.

shops and ladies from residing at court. king being informed of this propofal, was much incenfed; and fending for the peers, told them, that he understood there was a bill brought into the house of commons, intrenching upon those prerogatives and royalties which his predeceffors had enjoyed, and which he was determined to maintain; and commanded the lords spiritual and temporal to acquaint the commons with this determination, and to charge their speaker, fir John Bully, upon his allegiance, to deliver up the bill, with the name of the person who had brought it into the house. When the commons received this message, they came before the king in full parliament, delivered up the obnoxious bill, with the name of its author, and expressed the deepest concern that they had offended his majesty; most humbly praying him to excuse them, " for that " it never was their intent to speak, show, or act " any thing which should be an offence or give " displeasure to his majesty." The king was graciously pleased to accept of their excuse. the house of lords condemned Mr. Haxey to die the death of a traitor. And this most cruel fentence would probably have been executed upon him, if he had not been a clergyman. But the archbishop of Canterbury, with all the other prelates, fell on their knees before the king, and most earnestly begged his life, and the custody of his body; which they obtained 19.

¹⁹ Cotton's Abridg. p. 362.

The fessions of parliament in this, as well as in Sessions of former periods, were commonly very short, which short. was attended with many inconveniencies, Laws were made in halte, without due deliberation; and affairs of great importance, which ought to have been discussed in parliament, were left to be determined by the king and his council. medy these inconveniencies, certain expedients were fometimes employed, which were productive of still greater evils. In the tenth year of this reign, A. D. 1386, the two houses invested a committee of eleven prelates and peers with parliamentary powers, and compelled the king to grant them a commission to exercise all the prerogatives of the crown, in order to regulate certain affairs which the parliament could not overtake 20. By this measure the constitution was quite subverted for a feafon, and before it was restored, almost all who had been concerned either in oppoling or promoting the above expedient, were involved in ruin. About ten years after a similar method was adopted, by the parliament that met at Shrewsbury January 27, A.D. 1398. On the last day of a fession that had lasted only four days, the commons prefented a petition to the king in the house of lords, to this purpose,—"That " whereas they had before them divers petitions, 46 as well for special persons and others not read " and answered, and also many other matters and 56 things had been moved in presence of the king,

20 Parl. Hift. p. 401.

" which for shortness of time could not be well " détermined, that it would please his majesty to ec commit full power to certain lords and others. " to examine, answer, and dispatch the petitions, " matters, and things above faid, and all de-" pendencies on them 21." As this parliament was entirely devoted to the court, this petition was readily granted by the king; and twelve lords and fix commoners were invested with parliamentary powers; which they abused in such a manner, that they brought destruction both on themselves and on their mifguided sovereign, who trusted too much to their authority. gerous is it for a predominant party to grasp at unconstitutional powers, which they seldom fail to abuse to their own ruin, as well as to the hurt of their country.

Statute law. Many laws that were made in the reign of Richard II. have still a place in our statute-book; but the far greatest part of them have been as effectually repealed by length of time and change of circumstances, as they could have been by sisty acts of parliament. Of this kind are all the laws for regulating the prices of labour and provisions, as well as many others 22. Some very wise and good laws were made in this reign for the encouragement of navigation, trade, and commerce. By one of these laws it was enacted, that the merchants of England should neither export nor import any goods in any but English ships; which

Book IV.

²¹ Parl. Hift. p. 492. 22 Statutes, vol. 1. p. 333-424.

167

Ch. 3. § 5. CONSTITUTION, &c.

may be confidered as our first navigation act ²³. Some good laws were also made in this reign for increasing the number, and regulating the proceedings, of justices of the peace ²⁴. Such as defire a more particular knowledge of the statutes made in this period, may have recourse to the statute-book, and the ingenious work quoted below ²³.

The common law declined rather than improved in this period. "Richard II. (fays an excellent "judge) fucceeding his grandfather, the dignity of the law, together with the honour of the kingdom, by reason of the weakness of this prince, and the difficulties occurring in his gowernment, seemed somewhat to decline, as may appear by comparing the twelve last years of Edward III. commonly called quadragesms, with the reports of king Richard II. wherein appears a visible declination of the learning and depth of the judges and pleaders 26."

The barbarous disorderly custom of maintenance, as it was called, contributed not a little to disturb the peace of the country, and prevent the impartial administration of justice. Maintenance, which prevailed very much through the whole of this reign, is thus defined in a statute made in a parliament at Westminster A. D. 1377:—" Divers people of small revenue of land, rent, or other

Mainte-

se possessions, do make great retinue of people, as 44 well of esquires as of others, in many parts of st the realm, giving to them hats, and other li-" veries, of one fuit by year, taking from them " the value of the same livery, or percase the 44 double value, by fuch covenant and affurance, that every of them shall maintain other in all quarrels, be they reasonable or unreasonable, " to the great mischief and oppression of the es people27."

Perogatives of the crown.

The prerogatives of the crown, and the liberties of the people, were both in a very fluctuating unsettled state in the reign of Richard II. In the hurling times, as they were called, towards the beginning of this reign, the infurrections of the commons threatened the diffolution of all government; -about the middle of it, a powerful combination of the nobles annihilated the prerogatives of the crown, and engroffed the whole power of the state; -and towards the end of it, the court-party gained the ascendant; and the weak unhappy Richard, supported by a junto of his favourites, invested with unconstitutional powers by an obsequious parliament, acted in a manner so arbitrary and imprudent, that he lost the affections of his subjects, and gave an opportunity to a bold usurper to deprive him of his crown and life. is difficult to determine, in which of the above fituations the people were most oppressed, and the greatest acts of tyranny were perpetrated.

27 Statutes, vol. 1. p. 335.

The hereditary revenues of the crown were now become quite inadequate to the expences of go- grown. vernment, especially when the nation was en-This obliged Richard II. who gaged in war. was uncommonly expensive in his household, to make frequent applications to parliaments and convocations for supplies, which were granted almost every year, and consisted, either in additional impositions on merchandise, or in tenths and fifteenths. A tax of a new and fingular nature was imposed by parliament, A. D. 1378. This was a capitation-tax, proportioned to the different ranks and degrees of men in fociety; and on that account it merits our attention. proportions were as follows:

A duke, 10 marks;—an earl, 41.—a countessdowager, 41.-a baron, banneret, or knight who had as good an estate as a baron, 2 l.—every bachelor and esquire, who by estate ought to be made a knight, 20 s.—widows of fuch bachelors and esquires, 20 s.—esquires of less estate, 4 s. 7 d. -widows of fuch esquires, 6s, 8d.-esquires without lands, that bear arms, 3 s. 3 d.—chief prior of the hospital of St. John, 40 s.—every commander of the order, 20 s.—every knight of the order, 13 s. 4 d.—every brother of the order, 3 s. 4 d.-judges of the king's bench and common pleas, and chief baron of the exchequer, each 100 s.—every ferjeant and great apprentice of the law, 40 s.—other apprentices of the law, 20 s. attorneys, 6 s. 8 d.-mayor of London, 4 l.-aldermen of London, 40 si-mayors of great towns,

O O K IV.

CHAP. IV.

History of Learning in Great Britain, from the death of king John, A. D. 1216, to the accescession of Henry IV. A. D. 1399.

HERE feems to have been a succession of Plan of light and darkness in the intellectual as well the chapter. as in the material world. How bright, for example, was the funshine of the Augustan age? and how profound the darkness of that long night which succeeded the fall of the western empire? From that darkness Britain, and some other nations of Europe, began to emerge a little in the eleventh and twelfth centuries, as hath been made

appear in the fourch chapter of the preceding book of this work. In the thirteenth and fourteenth centuries, which are the subject of our present enquiries, though the state of learning was sluctuating, and some parts of it perhaps declined a little; yet, upon the whole, the circle of the sciences was enlarged, and some of them were considerably improved. This, it is hoped, will be evident from the following very brief account—1. Of the sciences that were cultivated.—2. Of the most learned men who slourished.—3. And of the most considerable seminaries of learning that were established in Britain in the present period.

SECTION L

An account of the Sciences that were cultivated in Britain from A. D. 1216, to A. D. 1399.

ALL the following sciences were cultivated in the present period, as many of them had been in the former, viz. grammar, rhetoric, logic, metaphysics, physics, ethics, scholastic divinity, the canon law, the civil law, the common law, arithmetic, geography, geometry, astronomy, astrology, optics, mechanics, chymistry, alchymy, medicine, and surgery. And as an account hath been already given of many of them, it will not be necessary to dwell long upon them in this place.

¹ See vol. 6. p. 89-116.

ŁΠ

OO!

The grammar of the Latin language was not Grammar. studied with fo much diligence and success in this. as it had been in the former period. I know of no British writers of the thirteenth and fourteenth centuries who wrote fuch pure and classical Latin as John of Salisbury, Peter of Blois, Joseph of Exeter, and feveral others, who flourished in the improvement of the English twelfth 2. The language, and the more frequent use of it even by scholars, both in conversation and writing, might be one reason that the Latin was not studied with fo much ardour as formerly. The impatience of the youth of those times to engage in the study of the canon law, which was then the high way to wealth and honour, was probably another reason that they did not employ a sufficient portion of their time in the study of the languages 3. But, whatever might be the reasons of it, the fact is certain, that the Latin used in the most celebrated feats of learning in the thirteenth century was exceedingly barbarous and ungrammatical. Robert Kilwarby archbishop of Canterbury visited the university of Oxford A. D. 1276, and with great folemnity pronounced a fentence of condemnation against the following phrases, which were commonly used, and even defended in that university: " Ego currit; -tu currit; -currens est ego," &c +. Nor was this sentence of the primate, though enforced by very severe fanctions, sufficient to banish

² Bulzi Hist. Univers. Parisens. p. 1556.

³ M. Paris, an. 1254.

⁴ A. Wood, Hist. Univers. Oxon l. 1. p. 125.

those barbarisms, or silence their defenders; for when his successor archbishop Peckham visited Oxford, A. D. 1284, he found it necessary to pronounce a similar sentence against the same phrases, and others equally ungrammatical.

Greek, Hebrew,

When the Latin language, which was fo much used in churches, colleges, and courts of justice, and in compositions of all kinds, was cultivated with fo little care, we cannot suppose that much application was given to the Greek, Hebrew, and Oriental languages. The truth is, they were totally neglected, except by very few; and these few were strongly suspected of being magicians, who studied those unknown languages in order to converse more secretly with the devil. famous Roger Bacon, who was unquestionably the most learned man of the thirteenth century, and the best acquainted with the state of learning, assures us, that there were not more than three or four persons among the Latins in his time who had any knowledge of the Oriental languages. excellent person most pathetically lamented this neglect of the languages, and warmly recommended the study of them by the strongest arguments 7.

Rhetoric.

When the knowledge of the languages was so defective, rhetoric, or the art of pleasing, affecting, and persuasive speaking, could not be cultivated to great advantage. That part of education

however

⁵ A. Wood, Hift. Univers. Oxon. l. 1. p. 127. 6 Id. ibid. p. 130.

⁷ R. Bacon, Opus Majus, p. 44-56.

however was not quite neglected, Lectures on rhetoric were read in every considerable seat of learning; and fuch as excelled in it were advanced to the degree of masters or doctors in that art . The Dominicans, Franciscans, and other mendicant friars, studied the arts of declamation with no little diligence; because the success of their begging depended very much on the popularity of their preaching. Bederic de Bury, who was provincial of the Augustinians in England in the fourteenth century, was greatly admired by his contemporaries, and is celebrated by feveral authors for the eloquence of his preaching?.

Logic was one of the fashionable and favourite Logic, studies of the times we are now delineating; but unfortunately it was that quibbling contentious kind of logic which contributes little or nothing to the detection of error, the discovery of truth, or the improvement of right reasoning. It is impossible to give an English reader any distinct ideas of this wrangling art in a few words; and it would certainly be improper to employ many on fuch a fubject. It is sufficient to say that the logic of this period was the art of disputing without end and without meaning; of perplexing the plainest truths, and giving plaufible colours to the greatest absurdities. A logical disputant of this period was not ashamed to argue, with as much earnestness as

⁸ A. Wood, part 2. p. 4.

⁹ Bale Script, Brit. cent. 6. n. 31. Pits de Illust. Script. Ætat. xiv. n. 675:

if his life had depended on the issue of the debate,

"That two contradictory propositions might
both be true ""." If any of my learned readers
have a taste for this kind of erudition, they may
amuse themselves with explaining the propositions
in the note below, which were keenly agitated by
the logicians of this period ". These frivolous
unintelligible disputes were conducted with so
much eagerness, that from angry words the disputants sometimes proceeded to blows, and raised
dangerous tumults in the seats of learning "."

Much cultivated at Oxford. This trifling contentious kind of logic flourished first in the university of Paris, and was brought from thence into the English universities, where it was cultivated with too much ardour, particularly at Oxford, which became very samous in the thirteenth century for the number and subtilty of her logical disputants. The decay of this admired art of wrangling was thus pathetically lamented by an affectionate son of that university, towards the end of the sourceenth century:—"That subtile logic

^{*} A. Wood, lib. 1. p. 125. 129.

and beautiful philosophy, which rendered our

mother, the university of Oxford, so famous over all the world, is now almost extinguished

in our schools. As India anciently gloried in

" her precious stones, and Arabia gloried in her

" gold, fo the university of Oxford then gloried in

the multitude of her fubtile logicians, and in

her prodigious treasures of profound philosophy.

"But, alas! alas! with grief I speak it, she is

so now hardly able to wipe away the dust of error

and ignorance from her countenance 13."

The metaphysics and natural philosophy of this period, like the logic above described, were more verbose, contentious, and subtile, than useful. Instead of investigating the laws of nature and the properties of things, by sagacious and well-conducted experiments, the natural philosophers of those times invented a thousand abstract questions, on which they disputed with great vehemence, and wrote many tedious and useless volumes. We may form some idea of the subjects of the disputes and writings of those philosophers from the propositions in these sciences which were solemnly condemned by archbishop Peckham, in his visitation of the university of Oxford, A. D. 1284; some of which the reader will find in the note below 14.

These,

^{2.} Nulla potentia passiva seu diminuta est in materia.

^{3.} Forma corrumpitur in pure nihil, scil. forma substantialis.

^{4.} Privatio est pure non ens, et ipsa est in super celestibus.

These, and some other philosophical tenets of the same kind, particularly this one,—" Quod in homine " tantummodo existit una forma,"—" That in a " man there is only one form,"—appeared so dangerous to the good archbishop, that he not only condemned them with much solemnity, and subjected such as presumed to teach them to very severe penalties; but he also wrote an account of this important transaction to the pope and cardinals".

Experiments. The very learned and ingenious friar Bacon laboured with great earnestness, both by his example and writings, to give a different turn to the enquiries of his contemporaries into nature, and to persuade them to have recourse to experiments; which, he observed, were far more convincing and satisfactory than abstract reasonings. This he illustrated by a very samiliar example: "Though it were proved (said he) by sufficient arguments, to a man who had never seen fire before, that it burnt and destroyed things that were put

er into it, he would not be fully convinced of this truth, by any arguments, till he had put his " hand, or fome combustible thing into the fire; " which experiment would at once remove all " doubt, and bring full conviction 16." This exrellent person, as he affures us, spent no less than two thousand pounds (a great sum in those times) in constructing instruments, and making experiments, in the course of twenty years; and it is well known, that by those experiments he made many discoveries, which have excited the admiration of all fucceeding ages 17. But the example and the arguments of this extraordinary man were little regarded by his contemporaries.

Moral philosophy was taught and studied in the Moralphischools, in this period, with no little diligence; but losophy. in the same dry, contentious, and sophistical manner with the other sciences. Many sums (as they were then called) or fystems of morality were composed, by the most learned schoolmen, consisting of various fubtile distinctions and divisions on the feveral virtues and vices, and of a prodigious number of curious unnecessary questions on each of these divisions. For as the logicians of those times too frequently displayed their acuteness, by perplexing the plainest truths, and giving plausible colours to the groffest errors; so the moral philofophers often employed all their art in explaining away the obligations of the most amiable virtues.

is R. Baconi Opus Majus, p. 445.

³⁷ R. Bacon in Opere Minore, ch. 17.

and the turpitude of the most odious vices. For example, Nicolas de Ultricuria, a famous professor in the university of Paris, A. D. 1300, laboured, in his public lectures, to convince his scholars that in some cases theft was lawful and pleasing to God. "Suppose (faid he) that a young gentleman " of a good family, meets with a very learned pro-" fessor (meaning himself), who is able in a short 46 time to teach him all the speculative sciences, " but will not do it for less than one hundred " pounds, which the young gentleman cannot or procure but by theft, in that case theft is lawful. "Which is thus proved.—Whatever is pleafing to "God is lawful; -- it is pleafing to God that a 66 young gentleman learn all the sciences;—he " cannot do this without theft:-Therefore theft " is lawful, and pleafing to God 18." Some still more curious examples of this kind of fophistry might be produced, but they are too indelicate to be admitted into this work 19.

Divinity. .

That species of theology known by the name of fichool-divinity, which had been introduced in the former period, was cultivated with uncommon ardour in the thirteenth century, which on that account is called the scholastic age 20. In that century, many of the most celebrated schoolmen flourished, who were universally admired as prodigies of learning; and honoured with the pompous

¹⁸ Bulæi Hift. Univers. Parisien. tom. 4. p. 311.

¹⁹ Id. tom. 3. p. 442.

²⁰ Cave, Historia Literaria, p. 699.

titles of profound, sublime, wonderful, seraphie, angelic doctors.

The schoolmen of the former period made the Biblescriptures the chief subject of their studies, and the text of their lectures, as some of them still continued to do, who for that reason were called Bible-divines. But in the course of the thirteenth century, the holy scriptures, together with those who studied and explained them, fell into great neglect, not to fay contempt. The Bible-doctors were flighted as men of little learning or acuteness; they had few scholars, and were not allowed an apartment, or a fervant to attend them, or even a stated hour for reading their lectures, in any of the famous universities of Europe 21. The illustrious Roger Bacon inveighed very bitterly against this abuse; and his excellent friend Robert Greathead, hishop of Lincoln, wrote a pathetic letter to the regents in theology in the university of Oxford on this subject; earnestly intreating them to lay the foundation of theological learning in the study of the scriptures, and to devote the morning-hours to lectures on the Old and New Testaments 22. But all these remonstrances and exhortations had little or no effect.

The far greatest number, and the most famous of the school-divines of this period, were called tiaries. Sententiaries; because they studied, read lectures, and wrote commentaries on that ancient system of divinity called the fentences, written by Peter Lom-

21 A. Wood, Antiq. Oxon. 1. 1. p. 53. 22 Id. ibid p. 91, 92. bard

bard archbishop of Paris 23. Some of the most celebrated of those sententiaries, as John Duns Scotus, Albertus Magnus, Thomas Aquinas, &c. wrote voluminous sums or systems of divinity, confisting of an incredible number of questions and answers, on a great variety of subjects 24. Many of the school-divines applied to the study of letters with uncommon ardour; not a few of them appear to have been men of genius, posfessed of great fertility of invention, and of still greater subtilty and acuténess; but want of true taste, and a right direction in their studies, rendered both their genius and application in a great measure useless, if not pernicious. They indulged themselves in a bold, or rather presumptuous freedom of enquiry, into subjects which are beyond the reach of human investigation; which betrayed them into fo many errors, that all the fingular, whimfical, and pernicious opinions, which have been propagated by modern freethinkers, are to be found in the writings of the school-divines of this period.

History of preaching.

The spirit of the school-divinity, which now reigned in all the samous universities of Europe, also took possession of the pulpit, in this period, and a new method of preaching was introduced, much more artificial than those methods of public instruction which had been used in former times.

²³ Cave, Hist. Liter. p. 667. Bulæi Hist. Univers. Parisien. t. 3. p. 657. 24 Cave, Hist. Liter. p. 727. 732.

The clergy, before this period, chiefly used two ways of preaching. The first of those was called postillating; and those who used it were called postillators. This consisted in explaining a large portion of scripture, sentence after sentence, in the regular order in which the words lay, making short practical reflections on each sentence. this age, when it was usual to give every doctor a name expressive of his peculiar excellence, cardinal Hugo excelled fo much in this way of preaching, that he got the name of the authentic postillator 25. This ancient method of public instruction is still used in some foreign churches, and in the church of Scotland, under the name of lecturing.

Declaring.

The other ancient way of preaching was called declaring; because the preacher, without naming any particular text, declared what subject he defigned to preach upon; beginning his fermon with words to this purpose: "In my present ser-"mon, I design, by the grace of God, to discourse on such or such a subject, on the fear " of God, for example; and on this subject, I " defign to lay down fome true and certain con-" clusions," &c. This last way of preaching was most common and most popular, and was not entirely laid afide for more than a century after this period 26.

The new method of preaching, which was in- New metroduced about the beginning of the thirteenth thod of preaching.

25 A. Wood, Antiq. Oxon. 1. 1. p. 58, 59. 26 Id. ibid. N 4 century,

century, differed from both those ancient methods in feveral respects. The preacher, at the beginning of his discourse, read a text out of some book and chapter of the Old or New Testament (which had lately been divided into chapters and verses by cardinal Langton 27), as the theme or fubject of his fermon. This text he divided into feveral parts, by the help of that fubtile logic and divinity, which were then fo much in vogue; and the greater dexterity he discovered in splitting his text into many parts, he was esteemed the greater divine and the better preacher. Having thus divided his text, he formed several heads of discourse on each of these divisions; on which heads he descanted, one after another, subdividing them into many particulars. This new and artificial method of preaching was greatly admired, and generally practifed, by the younger clergy of those times. But it was no less warmly opposed and condemned by some of the most learned men of this period, who represented it to be,-a childish playing upon words,-destructive of true eloquence,—tedious and unaffecting to the hearers, and cramping the imagination of the preacher. Roger Bacon, in particular, speaks of it with great contempt and aversion; and assigns a very fingular reason for its gaining ground in his time: "The greatest part of our prelates (says he), " having but little knowledge in divinity, and " having been little used to preaching in their

²⁷ Hen. Knyghton, apud Script. col. 2430.

[&]quot; youth,

"youth, when they become bishops, and are fometimes obliged to preach, are under a neceffity of begging and borrowing the fermons of certain novices, who have invented a new ". way of preaching; by endless divisions and quibblings; in which there is neither fublie mity of style nor depth of wisdom, but much " childish trifling and folly, unsuitable to the dig-" nity of the pulpit. May God (adds the zealous 66 Bacon) banish this conceited and artificial way of preaching out of his church; for it will 66 never do any good, nor elevate the hearts of " the hearers to any thing that is great or excel-" lent 28." The opposition to this new method of preaching continued through the whole of the fourteenth and part of the fifteenth century. Thomas Gascoigne, chancellor of the university of Oxford, tells us, that he preached a fermon in St. Martin's church, A. D. 1450, without a text. and without divisions, declaring such things as he thought would be useful to the people. Amongst other things, he told them, in vindication of this ancient mode of preaching,-" That Dr. Au-" gustine had preached four hundred fermons to. " the clergy and the people, without reading a " text at the beginning of his discourse; and that " the way of preaching by a text, and by divi-" fions, was invented only about A.D. 1200, as " appeared from the authors of the first fermons

²³ R. Bacon, apud A. Wood, p. 59.

"of that kind "." But this new method of preaching by a text and divisions, which met with such violent opposition, and was introduced by such slow degrees, at length prevailed universally, and still prevails.

Supreme authority of Ariftotle in the fchools.

The supreme authority which Aristotle obtained in the schools of theology, as well as of philofophy, in the course of the thirteenth century, had confiderable influence on the state of learning, and even of religion, in this period. The name, and some parts of the writings, of Aristotle, were known in England, and other countries of Europe, long before this time. But it was not till about the middle of the thirteenth century that he obtained that dictatorial authority among learned men, and in the most famous feats of learning, that he fo long maintained. About that time he began to be called the philosopher, by way of eminence. " He is preferred (fays Bacon) before all other philosophers, in the opinion of all men of learning; whatever he hath affirmed is re-" ceived by them as true and found philosophy: " and, in a word, he hath the fame authority in " philosophy that the Apostle Paul hath in di-" vinity 30." To fuch an extravagant height was this veneration for Aristotle carried before the middle of the fourteenth century, in some of the most famous universities, particularly in that of

Paris,

²⁹ T. Gafc. Lex Theolog. apud A. Wood, p. 59. ³⁰ Bacon, Opus Majus, edit. a Jebb, p. 36.

Paris, that students were obliged to take a solemn oath, to defend the opinions of Aristotle, of his commentator. Averrois, and of his other ancient commentators 31,

Several causes conspired about this time to exalt How ob-Aristotle to the supreme dominion of the ideal world. Latin translations of different parts of his writings were published, soon after the beginning of the thirteenth century, by Michael Scot, Alured English, William Fleming, and others; which made them better known, and more gemerally read, than they had formerly been 32. His logics had long been studied and admired, which procured a favourable reception to his other works, especially from the scholastic divines, to whose taste and genius they were admirably fuited. ingly we find, that Albert the Great, Thomas Aquinas, John Duns Scotus, and all the most famous schoolmen who flourished in this period, devoted much of their time and thoughts to the study and illustration of the works of Aristotle: and that by the authority of these works they chiefly supported their several systems and opinions 33. The court of Rome had formerly difcouraged the study of Aristotle's works, because they had given rife to certain unprofitable abfurdities, which disturbed the peace of the church, without adding to the honours or riches of the

³¹ Bulæi Hift. Univers. Parisien. tom. 4. p. 275.

³² Bacon, Opus Majus, p. 36, 37. Biographia Britannica, aft edit. vol. 1. p. 342.

³¹ Cave, Hist. Literaria, p. 695-756.

clergy. Such, for example, were the errors of Amaury of Charters, which were condemned by pope Innocent III. and by the council of Paris, A. D. 1209; the council at the same time condemning the metaphysics of Aristotle to the flames,-" because they had not only given rise " to the heresies of Amaury, by their subtil-" ties, but might give rise to other heresies not " vet invented 34." But the court of Rome having foon after discovered, that the same writings which had ferved to give plaufible colours to idle unprofitable errors, might do the same friendly office to more beneficial and lucrative abfurdities, changed its conduct, and recommended the study of Aristotle's works in the warmest manner 35.

Fernicious to learning. It must be obvious, that this extravagant veneration for Aristotle, and blind submission to his opinions, could not but obstruct the progress of real knowledge; especially when it is considered, that very sew of his admirers, in this period, were capable of reading his works, in their original language, but became acquainted with them only in very faulty incorrect translations. We are assured by the illustrious Roger Bacon, that there were not above four persons among the Latins in his time who understood Greek; and we have good reason to believe, that even Thomas Aquinas, the most admired of all Aristotle's commentators, did

³⁴ Du Pin, Ecelef. Hift. Cent. xiii. chap. 8. Bruckeri Hift. Philosoph. edit. 1766. tom. 3. p. 685. 655. 801.

³⁵ Id. ibid. p. 705, 706.

, not understand that language 36. The very translators of Aristotle's works appear to have been a kind of impostors. Bacon affirms, that Michael. Scot borrowed all that he published in his own name from one Andrew a Jew; " and as for William Fleming (fays he), every body at ⁶⁶ Paris knows, that he doth not understand the Greek language, though he pretends to it; and therefore he translates every thing falsely, and corrupts the learning of the Latins 37." It is no wonder, therefore, that the same learned person declared, " that the time and labour employed in ee reading these wretched translations were lost; and that if he could have got all the Latin translations of Aristotle's works into his hands, he would have thrown them all into the fire, ce as they were the great cause of the increase of ss ignorance and error 36."

The civil and canon laws were studied in this period by many of the clergy, with uncommon ardour; because the knowledge of these laws not only qualified them for the lucrative employment of advocates or pleaders, but also procured them preferment in the church. "The civil and canon laws," says a contemporary writer, "are in our days so exceedingly profitable, procuring both riches and honours, that almost the whole multitude of scholars apply to the study of them "."

Civil and canoniaw.

Several

R. Bacon, Opus Majus, l. 3. ch. 1. Bruckeri Hist. Philosoph. tom. 3. p. 802. 804.

³⁹ Rob. Holcot, apud A. Wood, l. r. p. 160-

Several other authors of that period complain, that young scholars were so impatient to engage in the study of those laws, that they neglected the study of languages, philosophy, and divinity 40. To remedy this abuse, Pope Innocent IV. directed a bull on this subject to all the prelates of France, England, Scotland, Wales, Spain, and Hungary, in which he fays, "That his ears had been stunned " with reports, that great multitudes of the clergy, " neglecting philosophy and theology, crowded to " hear lectures on fecular laws; and, which was " still more abominable, that bishops advanced " none to benefices, dignities, and prebends, in " the church, but fuch as were either advocates " or professors of law. To put a stop (adds he) " to this intolerable evil, I strictly command, by "this irrefragable constitution, that no advocate, or professor of laws, shall enjoy any pre-emior nence on that account, or be advanced to any " ecclefiastical dignity, prebend, parsonage, " benefice, unless he be competently skilled in other sciences 41." To this bull his holiness added the following very remarkable clause:-" As in France, England, Scotland, Wales, "Spain, and Hungary, the causes of the laity " are not determined by the Imperial laws, but " by certain fecular customs; and as they might ec be as well determined by the canons of the 66 most holy fathers; and as a mixture of those

⁴⁰ M. Paris, Hist. Ang. an. 1254.

⁴¹ Bulæi Hift. Parifien. tom. 3. P. 265.

[&]quot; customs

"customs with the canons doth more hurt than good; by the advice, and at the request of our brethren, and other religious men, we command, that in the foresaid kingdoms those secular laws or customs be no longer taught or studied, provided the consent of their kings and princes can be obtained "." A modest attempt of his holiness to abolish the municipal laws of all those countries, and substitute his own canon law in their room.

Geometry, and other branches of mathematical learning, were much neglected in the period we are now examining, especially in the former part of that period. Of this the famous Roger Bacon frequently complains. ". The neglect of matheer matics (fays he) for these thirty or forty years es past, hath done great harm to learning among "the Latins 43." This neglect was so great (as he assures us), that very few students proceeded further than to the fifth proposition of the first book of Euclid's Elements; and that there were not above five or fix persons then alive, who had made any confiderable progress in mathematical learning 44. The truth is, that mathematical -studies, in those times, brought neither honour nor profit to those who engaged in them. On the contrary, those few who prosecuted them with ardour and fuccels, were strongly suspected of

Geometry.

⁴² Bulæi Hist. Parisien. tom. 3. p. 265.

⁴⁴ R. Bacon, apud A. Wood, lib. 1. p. 122.

holding a criminal correspondence with infernal spirits, and on that account were hated and persecuted as magicians 45.

Arithme-

Arithmetic is so useful and necessary in the common affairs of life, as well as in all other arts and sciences, that the attention paid to it is generally proportioned to the necessities of society, and the state of the other sciences. The Arabian numerals were known and used in Britain in this period, and the use of them contributed very much to improve and facilitate arithmetical ope-These operations are thus described rations 46. by Roger Bacon: " It is necessary that a theo-" logian excel in the knowledge of numbers, and " understand all arithmetical operations, viz. nu-" meration, addition, fubtraction, mediation, mul-"tiplication, division, extraction of the roots, 66 both integers and fractions. He must not only " understand vulgar fractions, as halfs, thirds, 66 fourths, fifths, &c. &c. but he must also un-" derstand astronomical fractions, as minutes, se-" conds, thirds, fourths, fifths, &c. &c. because " in chronological calculations he must have recourse to the motion of the sun and moon, in " which fuch fractions are of capital confidera-"tion. He must not only understand the frac-" tions of the Latins and Arabians, but also of "the Hebrews, who divide an hour into one

⁴⁵ Delreo Disquisit. Magio. Naude Apologie pour les grandes' Hommes soupçonner de Magic.

⁴⁶ Wallis's Algebra, ch. 4. p. 9-14.

[&]quot; thousand

"thousand and eighty parts. Besides, it is neceffary for him to understand the reduction of "fractions of different kinds into those of one kind. For if it happens that among integers there are fractions of different kinds, as z, 19, 46 2, &c. &c., he will not be able to manage "these numbers properly, unless he understand " how to reduce these different fractions into one kind of fraction, and so into integers 47." above description, it is probable, contains a system of the arithmetic of the thirteenth century, when Bacon flourished; to which very many valuable additions have fince been made. Basingstoke, archdeacon of Leicester, who had studied several years at Athens, brought the numeral figures of the Greeks into England, and taught the use of them, in the former part of this period 48. These figures may be feen, together with a description of the manner of using them, apud variantes lectiones, in Mat. Paris, edit 1644.

Greater attention was given to geography in the Geograpresent than in the preceding period, both by phy. princes and men of learning and curiofity. Lewis IX. king of France fent a friar named William into Tartary, A. D. 1253, to explore that and other countries; of which he wrote a description. Pope Innocent IV. had about seven years before sent friar John de Plano Carpini into

⁴⁷ R. Bacon, Opus Majus. p. 138.

⁴⁸ M. Paris, Hift. Ang. Δ. D. 1252. p. 559. col. 1.

the same countries; who also wrote a description of Tartary, and of the manners and customs of its inhabitants 49. From conversing with those and many other travellers, and from reading every thing that had been written on the subject, the indefatigable friar Bacon composed a description of all the countries of Europe, Asia, and Africa, that were known in the thirteenth century; and whoever will give himself the trouble to peruse that description, will find it both more extensive and more correct than he could have imagined 50. appears that this extraordinary person had adorned and illustrated his description by a map in which the latitude and longitude of places were afcertained by meridian and parallel lines, as in our present maps 34. But unfortunately this map is not to be found in any of the copies of our author's Opus Majus yet discovered. It is still more remarkable, that Bacon laboured with great earnestness to prove, that a much greater proportion of our terraqueous globe was dry land, and habitable, especially in the southern hemisphere, than was commonly believed; and that he endeavoured to prove this by the very fame arguments which determined Columbus, two centuries after, to go in quest of the new world 52.

Aftronomy. The following description of the state of astronomy in England in the thirteenth century, drawn

⁴⁹ R. Bacon, Opus Majus, p. 190, 191. 233.

by the greatest astronomer of that age and country, will be more fatisfactory than any thing that can be faid on that subject by a modern writer. "Astronomy is the study of the heavenly bodies; " by which their dimensions, distances, motions, &c. " are investigated. . It is either speculative or practical. Speculative astronomy ascertains the 44 number of the heavens and stars, whose di-"mensions can be comprehended by instruments; " and discovers their figures, magnitudes alti-"tudes, densities, risings, settings, and motions, " together with all the varieties and degrees of "their eclipses. It even condescends to speculate concerning the figure and dimensions of this earth which we inhabit, and of its larger di-" visions, which are called climates, and shews " the diversity of the horizons, and of days and " nights, in each of these climates. By specu-" lative astronomy all these things, and many " others connected with them, are determined. " Practical astronomy teaches us to discover the places, aspects, influences, and changes of the " stars-and planets, at any particular time. " attends also to those bodies which occasionally " appear in the air, as comets and rainbows, in " order to discover their places, altitudes, mag-" nitudes, figures, and many other things which " it is necessary to know. These things are done by proper instruments, by astronomical tables, and by certain rules and canons invented for "that purpose. All these investigations are instended to enable the astronomer to pronounce a \mathbf{O}_{2} " judgment

" judgment on what things can be done by the power of philosophy, not only on matter, but on all beings connected with matter, and guided by the influences of the heavenly bodies: as also, to pronounce a judgment on future events, as well as on those that are past and present; and to advance wonderful works, for promoting the prosperity, and preventing the misery, of mankind, in the most beneficent and illustrious manner." To the above description a development or elucidation of its several parts, of no less than two hundred solio pages, is subjoined.

Aftrology.

The learned reader will perceive, that what is called practical astronomy in the above description, is no other than judicial astrology; which was more highly admired, and more ardently cultivated, in the middle ages, than any other part of learning. In this vain fallacious science friar Bacon was a great adept, and fo great a believer, that he imputed all the wars and other calamities, which afflicted England, Spain, Italy, and other countries, A. D. 1264, to the neglect of astrology. "O how happy had it been for the church " of God, and how many mischiefs would it have " prevented, if the aspects and qualities of the " heavenly bodies had been predicted by learned " men, and known to the princes and prelates of " those times! There would not then have been " so great a flaughter of Christians, nor would so

⁵³ R. Bacon, Cpus Majus, p. 65.

er many miserable souls have been sent to hell st." But it should be remembered, that this was the foible of the age rather than of the man; and that though astrology was fallacious, the study of it contributed not a little to preserve and improve astronomy.

Astronomical instruments, particularly the qua- Mathemadrant, the astrolabe, and specula, or spying-glasses, struments; are frequently mentioned by the writers of this period. The quadrant is well known, and in daily use. The construction and various uses of the astrolabe are fully described by the famous poet Geoffrey Chaucer, in a treatife composed A. D. 1201 55. The construction of the specula or spying-glasses used by the astronomers of this period is not fo well known. There is however, fufficient evidence, that they were applied to the fame purposes, and answered the same ends, with our telescopes, which are thought to be of much invention, " Specula, or fpying-glaffes " (fays Roger Bacon), may be erected on a rifing " ground, opposite to cities or armies, in such a " manner that all things done by the enemy may er be discovered; and this may be done at any " distance we please. For, according to the laws " of optics, an object may be viewed through as " many glasses as we think fit, if they are pro-" perly placed; and they may be placed, fome " nearer and fome more remote, fo that the

⁵⁴ R. Bacon, Opus Majus, p. 243.

⁵⁵ See Chaucer's Works, edit. 1721. p. 439-451.

393

" object may be seen at any distance we desire.—
" Spying-glasses may be so formed, and so placed,
that we shall be able to read the smallest letters
at an incredible distance, to number even the
dust and sands, and to make the sun, moon,
and stars, to descend, or at least stem to defeend, from heaven so." From these passages,
to which several others might be added, it appears to be undeniable, that this learned friar was
in possession of an instrument of similar use and
construction with our telescope, though not, perhaps, so neat and portable so.

Optics.

The science of optics was not known or taught in England till about the middle of the thirteenth century. We learn from the best authority, that no lectures had been read on that fubject, at Paris, or at any other place among the Latins, except twice at Oxford, before A. D. 1267; and that there were only three persons then in England who had made any confiderable proficiency in that science 58. Friar Bacon was one of those three; and that he had made great proficiency in it, we have the clearest evidence still remaining, in his admirable treatife (De Scientia Perspectiva) of the science of perspective 59. In this treatife he hath explained at great length, and with wonderful perspicuity, the theories of reflected vision or catoptrics, and of refracted vision

⁵⁶ R. Bacon, Opus Majus, p. 357.

⁵⁷ See Plot's History of Oxfordinire, p. 215.

⁵⁸ A. Wood, Hift. Oxon. 1. 1. p. 122.

⁵⁹ Vide Opus Majus, p. 256-358.

or dioptrics, as well as of direct vision or optics; and from these theories he hath deduced many useful inventions; and, amongst others, that of reading-glaffes, which are thus plainly described: "If a man view letters, or other small objects, 44 through the medium of a crystal or glass, which is the leffer portion of a sphere, whose " convexity is towards the eye, he will see the " letters much better, and they will appear to 46 him larger. This instrument is useful to old er men, and to those who are weak-sighted, because by it they may see the smallest letters of suffi-"cient magnitude "." By his skill in catoptrics, he rivalled Archimedes in the constructing of burning-glaffes. "I have caused many burningse glasses (says he) to be made, in which, as " in a mirror, the goodness of nature may be "displayed. Nor are they to be accounted too expensive, when we consider the wonderful and " useful things they can perform. The first I " got made cost me fixty pounds of Parisian mo-" ney, equal to about twenty pounds sterling: " but afterwards I got a better one made for ten-" Parisian pounds, or five marks sterling; and " fince I have become more expert, I have dif-" covered that better ones may be made for two " marks, nay for twenty shillings, or even cheaper. " But in this great attention and dexterity are " required "." In a word, there is the clearest

⁶⁰ Vide Opus Majus, p. 352.

¹ R. Bacon, Opus Majus, Præfat. p. 9. n.

evidence in the works of this wonderful man, that he was acquainted with the construction of all the different kinds of instruments for viewing objects to advantage, which have been so much admired as modern inventions 62.

Mecha-

The study of mechanics as a science was introduced into England about the same time with the fludy of optics, and probably by the same perfons. This much at least is certain, that friar Bacon had acquired so extensive a knowledge of the mechanical powers, and their various combinations, and had thereby performed fo many furprising things, that he was suspected of being a magician. To remove that suspicion, he wrote his famous epiftle, concerning the fecret operations of art and nature, and the nullity of magic 63. In that epiftle he reprobates the use of magical characters, verses, incantations, invocation of spirits, and various other tricks, as criminal impositions on the credulity of mankind: and affirms that more wonderful works may be performed by the combined powers of art and nature, than ever were pretended to be performed by the power of " I will now (fays he) mention fome of magic. "the wonderful works of art and nature, in " which there is nothing of magic, and which e magic could not perform. Instruments may " be made, by which the largest ships, with only

⁶² Vide Ola Borrick, De Ortu et Progressu Chemiæ, apud Manget, Bibliothec. Chemic. tom. s. p. 31. Ibid. p 620.

⁶³ Manget, Bibliotheca Chemica, tom. 1. p. 616-626.

[&]quot; one

66 one man guiding them, will be carried with se greater velocity than if they were full of failors. -- Chariots may be constructed that will move with incredible rapidity, without the help of animals;—instruments of flying may be formed, " in which a man sitting at his ease, and meditat-66 ing on any subject, may beat the air with his artificial wings, after the manner of birds;—a finall instrument may be made to raise or depress the greatest weights;—an instrument may be fabricated, by which one man may draw a thouse fand men to him by force, and against their wills;—as also machines which will enable men to walk at the bottom of feas or rivers without "danger: - That all those instruments are made "in our times, is most certain, and I have seen them all, but that for flying, which I have never " feen, though I am well acquainted with the wife " man who invented it "."

Another science which was introduced into Eng. Chymistry. land in the course of the thirteenth century, was chymistry, or, more properly, alchymy; for it plainly appears from their writings, that the great object which the chymists of this period had in view was, to obtain these two things:-1. An universal medicine for the cure of all diseases, and for prolonging life beyond its usual limits;-2. The philosopher's stone, the powder of projection, or grand elixir, for transmuting baser metals into

⁶⁴ Manget, Bibliotheca Chemica, tom. 1. p. 619.

204

gold and filver 65. That both these things were attainable, they feem to have been fully perfuaded; and as they are evidently very defirable, they were most ardent and indefatigable in their efforts to obtain them; and to this must be ascribed the rapid progress of chymistry, and the prodigious number of chymists who flourished in this period. The famous friar Bacon, who was one of the most active and intelligent, as well as one of the most honest and communicative, of thoseancient chymists, fpeaks with great confidence of the reality of a medicine which would answer both the purposes of prolonging life and transmuting metals: " That " medicine (fays he) which could remove all the " impurities of baser metals, and change them " into the finest gold and filver, could also remove all the corruptions of the human body, to fuch a " degree, that life might be prolonged through "many ages 66." The two greatest princes who filled the throne of England in this period, Edward I. and Edward III. were great believers in the art of alchymy, and courted or pressed the most famous alchymists into their service. The celebrated Raymond Lully came into England on the preffing invitation of Edward I. and is faid to have furnished that prince with a very great quantity of gold for defraying the expence of an intended expedition into the Holy-Land 67. Of this

⁶⁵ Vide Manget. Bibliotheca Chemic.

⁶⁶ Bacon, Opus Majus, p. 472.

⁶⁷ Ola Borrick, apud Manget, tom. 1. p. 44.

Last circumstance Lully himself is filent; though he mentions several of his transactions in England, particularly the following very remarkable one: "You faw, O king! in thy fecret chamber of "St. Katharine, in the tower of London, that wonderful projection which I made in thy prefence on crystal, which I changed into a mass of the purest adamant (diamond), more precious than that which is natural, of which thou causedst to be made some little pillars for the 44 tabernacle of God 68.39 The following curious proclamation was published by Edward III. A. D. 1220, which is a fufficient evidence of his belief in the art of alchymy:-- "Know all men, that we " have been affured, that John Rows and Mr. William de Dalby know how to make filver by the art of alchymy; that they have made it in former times, and still continue to make it; " and confidering that these men, by their art, s and by making that precious metal, may be profitable to us, and to our kingdom, we have " commanded our well-beloved Thomas Cary to " apprehend the foresaid John and William, " wherever they can be found, within liberties or without, and bring them to us, together with « all the instruments of their art, under safe and " fure cultody "."

It is more than probable, that these two great Alchymy, princes, and the other believers in alchymy, were

⁶⁸ Ola Borrick, apud Manget, tom. 1. p. 28.

⁶⁹ Rymeri Fædera, tom. 4. p. 384.

deceived, and in the end disappointed. But it cannot be denied, that some of the alchymists of the thirteenth century, as Albert the Great, Raymond Lully, and friar Bacon, were men of great fagacity as well as industry; and that, when they were engaged in the ardent pursuit of the grand elixir and univerfal medicine, they made many useful and curious discoveries, which would have excited the admiration of a more enlightened age. This is acknowledged by the most capable judges: "To speak my mind (says Boerhaave) freely, I " have not met with any writers on natural philo-66 fophy, who treat of the nature of bodies fo pro-" foundly, and explain the manner of changing "them so clearly, as those called alchymists. 66 be convinced of this, read carefully their genuine " writings; for instance, the piece of Raymond "Lully, which he entitles Experiments; you will 66 find him, with the utmost clearness and simplicity, relating experiments which explain the " nature and actions of animals, vegetables, and of fossils; after this you will hardly be able to name " any author wherein physical things are treated of " to fo much advantage 7°."

Discovery of gunpowder. It will be sufficient to mention one, out of many of their discoveries. Nothing can be more certain than that friar Bacon had discovered the composition of gunpowder, and the terrible effects it was capable of producing, both which he hath described in several parts of his works, though these

⁷⁰ Boerhaave's Chymistry, vol. 1. p. 200.

things are generally supposed to have been first discovered almost a century after his death. place, he fays,-" Sounds like thunder, and cor-" ruscations, may be made in the air, and even " with greater horror than those which are made " by nature. For a little matter, properly prees pared, about the bigness of a man's thumb, " makes a horrible noise, and produces a dreadful corruscation; and by this a city or an army may " be destroyed in several different ways"." In the last chapter of the same treatise, concerning the fecret operations of art and nature, he discovers the ingredients of which this terrible thundering composition is made; "By saltpetre, sulphur, and " the powder of wood-coal, you may make this " thunder and corrufcation, if you understand the art of compounding them 72." It is true, that in the original, the letters which compose the words carbonum pulvere (powder of wood-coal) are not placed in their proper order. But this is evidently done to prevent the art of making this dangerous composition from being commonly known and practifed, because he knew that it might be employed to very pernicious purposes.

Medicine was confiderably improved in the Medicine. period we are now examining, which feems to have been owing to the following causes. Much greater attention was given to the education of physicians

than

⁷¹ R. Bacon de Secretis Operibus Artis et Naturæ, apud Manget,

⁷² Id, ibid, p. 124. Biographia Britain, art. Bacon. Freind's History of Physic, vol. 2. Append. Nº 5.

Book IV. than formerly, and stricter rules prescribed for regulating the time and manner of their studies. By the laws of the famous medical school of Salernum, made A. D. 1237, and afterwards adopted in other feats of learning, the scholars were obliged to spend three years in the study of philofophy, and five years in the study of medicine, and then to be strictly examined by two doctors of physic, before they could receive a licence to practife 73. The distinction between physicians. furgeons, and apothecaries, was now well underflood and much regarded; which could not but contribute to render them all more expert and skilful in their professions 74. The works of the most famous Arabian physicians were now translated into Latin, and read with great avidity; by which the knowledge which these physicians had derived from the Greeks, as well as the discoveries they had made themselves, came to be more generally known 75. And finally, the introduction of chymistry must have contributed to the improvement of medicine, by furnishing physicians with tinctures, elixirs, and other chymical preparations,

The clergy physicians, ard fome of the laity.

The clergy still continued to teach and practife medicine; and the greatest number of physicians were of that order in this period 77. But some of.

unknown to their predecessors 76.

⁷³ Bulæi Hift. Univer. Parif. tom. 3. p. 158.

⁷⁴ Rymeri Fæd. t. 5. p. 486.

⁷⁵ Dr. Freind's History of Physic, v. 2. p. 231.

⁷⁷ Annal. Dunftap. p. 467. 76 Id. ibid. p. 250.

the laity now began to make a figure in this profession, and a few of them even commenced authors: Gilbert English, who slourished in the thirteenth Gilbert century, is the most ancient medical writer of England whose works have been printed. His learning and skill in medicine are greatly extolled by Leland and bishop Bale; but Dr. Freind, who was a much better judge in matters of this kind. is more moderate in his commendations, and contents himself with faying,-" That he wrote as well as any of his contemporaries in other " nations; and did no more than they did, if he es took the bulk of what he compiled from the " writings of the Arabians 78."

English.

Iohn de Gaddesden was the next medical writer John Gadof England whose works have been preserved and printed. He flourished in the fourteenth century, and was educated in Merton college, Oxford 79. 46 Having acquired (fays Leland) a thorough " knowledge of philosophy, he applied with great: ardour to the study of medicine, in which he er made fo great proficiency, that he was justly " esteemed the great luminary of his age. He " wrote a large and learned work on medicine, to " which, on account of its excellence, the illustrious " title of the Medical Rose was given "." author's Medical Rose is a very curious work, containing a comprehensive system of medicine as it was practifed in England in the fourteenth cen-

⁷⁸ Bale, cent. 3. p. 256. Freind, vol. 2. p. 268. Leland, p. 356. 80 Leland, p. 355. 79 A. Wood, lib. 2. p. 87.

tury. In treating of each disease, he gives, 1st, The etymology of its name, and a general description of its nature; 2dly, The symptoms; 3dly, The prognostics; 4thly, The method of cure **. From this last part, which abounds in receipts, it plainly appears that the physicians of this period were not sparing of their drugs, and that their prescriptions were very complicated 42. It must also be confessed, that the methods of cure recommended by our author are some of them very whimfical, and others superstitious. What can be more whimfical than the following treatment of a patient in the small-pox, immediately after the eruption? " After this, cause the whole body of of your patient to be wrapped in red scarlet cloth, " or in any other red cloth, and command every "thing about the bed to be made red. This is an " excellent cure. It was in this manner I treated " the son of the noble king of England, when he " had the small-pox; and I cured him, without " leaving any marks 43." The patient whom he treated in this manner must have been either Edward III. or his brother prince John of Eltham. Can any thing be more superstitious than the following method of attempting to cure the epilepfy, which appears to have been recommended by all the most famous physicians of those times, as well as by our author? "Because there are many " children and others afflicted with the epilepfy

⁸¹ Vide Rof. Ang. passim, edit. 2491.

⁵² Id. ibid.

⁸ ld. p. 51.

who cannot take medicines, let the following experiment be tried, which is recommended by " Constantine, Walter, Bernard, Gilbert, and others, which I have found to be effectual, whether the patient was a demoniac, a lunatic, " or an epileptic. When the patient and his parents have fasted three days, let them con-" duct him to a church. If he be of a proper 44 age, and in his right senses, let him confess. "Then let him hear mass on Friday, during the " fast of quatuor temporum, and also on Saturday. "On Sunday, let a good and religious priest read over the head of the patient, in the church, the " gospel which is read in September, in the time " of vintage, after the feast of the Holy Cross. "After this let the priest write the same gospel " devoutly, and let the patient wear it about his 16 neck, and he shall be cured. The gospel is, " -This kind goeth not out but by prayer and " fasting "." The truth is, that though John de Gaddesden was at the head of his profession, confulted by the greatest princes, and celebrated by the greatest poets of his age, he appears to have been little better than an artful, interested quack, of fome reading, and furnished with a prodigious number of receipts, which he had collected from all hands, and applied often more to his own advantage than to that of his patients 85. But it ought to be remembered, that the empirical fuperstitious practices of our author and his contemporaries

were in a great measure owing to the general ignorance, credulity, and superstition of the times in which they slourished.

Royal touch.

To the same causes we must impute the high reputation of the royal touch, at this time, for the cure of the scrophula, of which archbishop Bradwardine, A. D. 1349, wrote in these strong terms: "Whoever thou art, O Christian! who deniest miracles, come and see with thine own eyes, come into England into the presence of the king, and bring with thee any Christian afflicted with the king's-evil; and though it be very ugly, deep, and inveterate, he will cure him in the name of Jesus Christ, by prayer, benediction, the sign of the cross, and the imposition of hands so."

Surgery.

It feems to be impossible to give a better account, in fewer words, of the state of surgery in this period; than that which is contained in the following passage of a system of surgery, composed by Guido de Cauliaco, A. D. 1363: "The practitioners in surgery are divided into sive sects.—"The first follow Roger and Roland, and the four masters, and apply pultices to all wounds and abscesses;—the second follow Brunus and "Theodoric, and in the same cases use wine only; "—the third follow Saliceto and Lansranc, and treat wounds with ointments and soft plasters;—the fourth are chiefly Germans, who attend the armies, and promiscuously use charms, potions, oil, and wool;—the fifth are old women and

Bradwardine de Causa Dei, l. 1. ch. 1. p 39.

[&]quot; ignorant

ignorant people, who have recourse to the faints in all cases 87." John Arden, who removed from Newark to London in the time of the great plague, A. D. 1349, was the most famous surgeon and writer on furgery who flourished in England in this period 88.

SECTION Iİ.

History of the most learned men who flourished in Britain, from A. D. 1216, to A. D. 1399.

T hath been already observed, and must always be remembered, that " the laws of general if history, and the limits of this work, will admit " only of a very brief account of a few who were " most eminent for their learning in every " period "."

Robert Grouthead or Greathead, the very Robert learned and famous bishop of Lincoln, was born head. at Stow in Lincolnshire, or (according to others) at Stradbrook in Suffolk, in the latter part of the twelfth century². His parents were so poor, that, when a boy, he was reduced to do the meanest offices, and even to beg his bread; till the mayor of Lincoln, struck with his appearance, and the quickness of his answers to certain questions, took

⁸⁷ Guido de Cauliaco, apud Freind, vol. 2. p. 320.

¹ Vol. 6. p. 122. 88 Id. ibid. p. 323.

² Anglia Sacra, tom. 2. p. 326. Tanner, Bibliothec. Britan: P. 345.

him into his family, and put him to school 3. Here his ardent love of learning, and admirable capacity for acquiring it, foon appeared, and procured him many patrons, by whose assistance he was enabled to profecute his studies, first at Cambridge, afterwards at Oxford, and at last at Paris 4. In these three famous seats of learning, he spent many years in the most indefatigable pursuit of knowledge, and became one of the best and most universal scholars of the age. He was a great master, not only of the French and Latin, but also of the Greek and Hebrew languages, which was a very rare accomplishment in those times. We are affured by Roger Bacon, who was intimately acquainted with him, that he spent much of his time for almost forty years, in the study of geometry, astronomy, optics, and other branches of mathematical learning, in all which he very much excelled 5. Theology was his favourite study, in which he read lectures at Oxford, with great applause 6. In the mean time, he obtained feveral preferments in the church, and was at length elected and confecrated bishop of Lincoln, A. D. 12357. In this station he soon became very famous, by the purity of his manners, the popularity of his preaching, the rigour of his difcipline, and the boldness with which he reproved

³ Ang. Sacra, p. 328, 329.

⁴ Id. p. 330. Tanner, Bibliothec. Britan. p. 345, 346. A. Wood, Hift. Oxon. 1. x. p. 82.

⁵ R. Bacon, apud A. Wood, Hist. Oxon. l. r. p. 82.

⁶ Id. ibid. 7 Tanner, p. 346. M. Paris, ann. 1235. p. 280.

the vices and opposed the arbitrary mandates, of the court of Rome; of this last it may be proper to give one example. Pope Innocent IV. had granted to one of his own nephews named Frederick, who was but a child, a provision to the first canon's place in the church of Lincoln that should become vacant; and fent a bull to the archbishop of Canterbury, and Innocent, then papal legate in England, commanding them to see the provision made effectual; which they transmitted to the bishop of Lincoln. But that brave and virtuous prelate boldly refused to obey this unreasonable mandate, and fent an answer to the papal bull, containing the following severe reproaches against his holiness, for abusing his power: " If we exec cept the fins of Lucifer and Antichrist, there ec neither is nor can be a greater crime, nor any ee thing more contrary to the doctrine of the es gospel, or more odious and abominable in the se fight of Jesus Christ, than to ruin and destroy 66 the fouls of men, by depriving them of the 66 spiritual aid and ministry of their pastors. so crime is committed by those who command the benefices intended for the support of able pastors, es to be bestowed on those who are incapable of " performing the duties of the pastoral office. is impossible therefore that the holy apostolic 66 fee, which received its authority from the Lord 46 Jesus Christ, for edification, and not for destruction, can be guilty of fuch a crime, or any thing " approaching to fuch a crime, fo hateful to God, " and fo hurtful to men. For this would be a \mathbf{P}_{3} " most

" most manifest corruption and abuse of its autho-" rity, which would forfeit all its glory, and " plunge it into the pains of hell"." Upon hearing this letter, his holiness became frantic with rage, poured forth a torrent of abuse against the good bishop, and threatened to make him an object of terror and aftonishment to the whole world. "How dare (said he) this old, deaf, doating fool, " disobey my commands? Is not his master the sking of England my subject, or rather my " flave? Cannot he cast him into prison, and " crush him in a moment?" But the cardinals by degrees brought the pope to think more calmly, and to take no notice of this letter. " Let us not " (faid they) raife a tumult in the church, without " necessity, and precipitate that revolt and separa-46 tion from us, which we know must one day take " place "." Remarkable words, when we reflect when and by whom they were spoken!

Death and character.

Bishop Grouthead did not long survive this noble stand against the gross corruptions and tyranny of the church of Rome: for he fell sick at his castle of Bugden that same year; and when he became sensible that his death was drawing near, he called his clergy into his apartment, and made a long discourse to them, to prove that the reigning pope Innocent IV. was antichrist. With this exertion his strength and spirits were so much exhausted, that he expired soon after, October 9, A. D. 1253 10,

^{*} M. Paris, Hift. Angl. p. 583. ann. 1253. 9 Id. ibid. 70 Id. ibid. p. 586.

A contemporary historian, who was perfectly well acquainted with him, hath drawn his character in the following manner: "He was a free and bold reprimander of the pope and the king,—an admonisher of the prelates,—a corrector of the monks,—an instructor of the clergy,—a supporter of the studious,—a censurer of the incontinent,—a scourge and terror to the court of « Rome,—a diligent searcher of the scriptures, and a frequent preacher to the people. At his table he was hospitable, polite, and cheerful. "In the church he was contrite, devout, and foec lemn; and in performing all the duties of his office he was venerable, active, and indefatise gable "." The illustrious Roger Bacon, who was most capable, and had the best opportunities of forming a true judgment of the extent of his. learning, by perusing his works, and by frequently converfing with him, hath given this honourable testimony in his favour: "Robert Grouthead bifhop of Lincoln, and his friend friar Adam de Marisco, are the two most learned men in the world, and excel all the rest of mankind both in " divine and human knowledge '2."

This most excellent and learned prelate was a very voluminous writer, and composed a prodigious number of treatises on a great variety of subjects, in philosophy and divinity, a catalogue

¹¹ M. Paris, Hift. Angl. p. 586.

¹² R. Bacon, apud Angl. Sacr. tom. 2. p. 344.

of which may be feen in the works quoted below 13.

Roger Bacon.

Though Roger Bacon was too modest to except himself when he gave the above character for superiority in learning to his patron Robert Grouthead, and his friend Adam de Marisco; it is very certain, that he was superior to them both, and to all his contemporaries, in genius, industry, and This extraordinary man was born near erudition. Ilchester, A. D. 1214, and at a proper age was fent to Oxford, where he profecuted his studies with fo much ardour and fuccess, that he gained the friendship and patronage of the greatest men in that university 14. Having spent some years at Oxford in the study of the languages, logic, and other branches of philosophy, he removed, according to the custom of those times, to Paris, where he foon became famous for his uncommon proficiency in all the fciences 15. Though he was much admired and careffed at that university, where many of the most ingenious men in Europe then resided, he returned into his native country A. D. 1240, being then about twenty-fix years of age 16. As the love of learning was his ruling passion, he settled at Ox-

¹⁶ Ouden de Script. Eccles. tom. 3. p. 191.

ford, and entered into the Franciscan order of monks in that city, that he might profecute his studies in tranquillity and with advantage.

Our Bacon foon abandoned the beaten track Manner in which was purfued by the scholars of that period, which he studied. who fpent their time in the study of very faulty translations of the works of Aristotle, and in reading commentaries on those works which had been written by men who did not well understand the original language. That he might not miffpend his time in the same manner, he made himfelf a perfect master of the Greek tongue. Not contented with this, he applied directly to the study of nature, and engaged in a course of laborious, expensive, and well-conducted experiments, as the only means of arriving at certainty and of making useful discoveries 17. By the generofity of his friends and patrons he was enabled to expend on those experiments, in twenty years, no less a sum than two thousand pounds, equal in weight of filver to fix thousand pounds, and in efficacy to thirty thousand pounds, of our money at present 18. This was indeed a great sum; but no money was ever better employed: for in the course of those experiments he made a greater number of useful and surprising discoveries in geometry, astronomy, physics, optics, mechanics, and chymistry, than ever were made by one man in an equal space of time.

¹⁷ Bacon, Opus Majus, p. 445, &c. 18 A. Wood, Hift. Oxon. l. 2. p. 136.

His fuffer-

But the world was long deprived of the advantage, and Bacon of the honour, of those discoveries, by the ignorance, envy, and malice of the monks of his order. For believing, or pretending to believe, that he was a magician, and held a criminal intercourse with infernal spirits. they put him under close confinement, and prohibited him from fending any of his writings out of his monastery, except to the pope 19. In this confinement he languished several years; till having fent a copy of his Opus Majus to pope Clement IV. A. D. 1266, that pontiff procured him fome mitigation of his sufferings, if not his full liberty 20. But he did not very long enjoy that relaxation, as he was again imprisoned by Jerom de Esculo, general of the Franciscan order. A. D. 1278; because his works, it was pretended, contained fome suspected novelties 21. this fecond confinement Bacon continued about eleven or twelve years, when he was fet at liberty by pope Nicholas IV. at the earnest request of several noblemen 22. Though he was now old, and no doubt much broken by his long and cruel fufferings, he still continued to prosecute his studies, by polishing his former works, and composing new ones, till death put an end to all his

calamities,

calamities, and all his labours, at Oxford, June 11, A. D. 1292 23,

We cannot but lament that friar Bacon met His difcowith fo many discouragements in the pursuit of useful knowledge. If he had lived in better times, or if he had even been permitted to profecute that course of inquiries and experiments in which he engaged after his return from Paris, it is highly probable that the world would have had many valuable discoveries that are still unknown. cellent modern writer having enumerated fome of Bacon's discoveries, viz. his discovery of the exact length of the folar year, and a method of correcting all the errors in the kalendar; -his discovery of the art of making reading-glasses, the camera obscura, microscopes, telescopes, and various other mathematical and astronomical instruments;—his discovery of gunpowder, of the method of making elixirs, tinctures, folutions, and of performing all the chymical operations that are now in use; -his discoveries of the nature of the mechanical powers, and of the best methods of applying and combining them in the construction of machines for performing many useful and surprising operations;—his discoveries in medicine, for curing difeases, and prolonging life;—this writer, I fay, having enumerated these discoveries, proceeds in the following manner: These are wonderful discoveries for a man to make, in so ignorant an age, who had no master

"to teach him, but struck it all out of his own brain: but it is still more wonderful, that such discoveries should lie so long concealed, till in the next succeeding centuries other people should start up, and lay claim to the merit of these very inventions, to which Bacon alone had a right 24."

His writings. According to Leland, Bale, and other literary historians, the writings of friar Bacon were very numerous 25. But it plainly appears, that these writers have divided one work into many, and, by multiplying titles, have represented them as much more numerous than they really were 26. It is to be hoped, that some man of learning, leisure, and industry, and placed in savourable circumstances, will soon arise, who, by employing his time in collecting, arranging, and publishing all the genuine works of the illustrious Roger Bacon, will do honour to his country, and justice to the memory of one of the greatest men it ever produced.

Michael Scot. Michael Scot of Balwirie was born in the last years of the twelfth, or the first of the thirteenth century, at the seat of his family, in the county of Fife in Scotland ²⁷. Having received the first part of his education in his native country, he was sent to Oxford, where many of the Scottish youth in

^{*7} Dempster, lib. 12. p. 494.

those times prosecuted their studies. How long our author continued at Oxford, is unknown; but, according to the custom of other lovers of learning, he went from thence to Paris, where he obtained the highest academical honours, and the title of the Mathematician among the learned, and of the Magician among the vulgar 28. The fame of his learning procured him an invitation from the emperor Frederick II. who was by far the most learned prince in Europe, and the greatest encourager and patron of learned men that flourished in the thirteenth century. One of the literary projects of that excellent prince was, to procure Latin translations of the works of Aristotle, and of the other philosophers and physicians of Greece; and in the execution of this project, Michael Scot was employed during some part of the time that he resided at the imperial court. For this task he was believed to be better qualified than many other scholars, by his knowledge of Aristotle's philofophy, and of the Greek and Arabic languages. Accordingly we are told by friar Bacon, that the translations of the physical and mathematical works of Aristotle, and of his best commentators, that were published by Michael Scot A.D. 1230, were the cause of the high admiration and supreme authority which that philosopher obtained among the Latins after that period 29. These translations our author dedicated to his illustrious patron the

⁴⁸ Bulæi Hist. Univers. Paris. tom. 3, p. 701. Bale, de Script. Britan. cent. 4. p. 351.

²⁹ R. Bacon, Opus Majus, p. 36, 37.

emperor Frederick II. at whose defire they had been undertaken and executed.

His fludies.

Michael Scot, like many of his contemporaries, fpent too much of his time and thought in the On this vain fallacious science fludy of aftrology. he composed a very voluminous work, at the command of the same emperor, to whom he was aftrologer; an office which was in those times both lucrative and honourable 30. He was also keenly engaged in the fludy of alchymy, or the transmutation of metals; and wrote a book on the nature of the fun and moon, which, in the mystical language of alchymists, signify gold and silver 35. Influenced by the prevailing taste of the times in which he flourished, he even applied to the still more frivolous studies of chiromancy and physiognomy, which pretend to teach the art of discovering the dispositions and fortunes of men, by the lines of their hands and features of their faces. In a word, the following character of this author, drawn by one who had studied his works, seems to be very just : "He was one of the greatest philosophers, mathe-" maticians, physicians, and linguists of his age. " and, had he not been too much addicted to the " vain studies of judicial astrology, alchymy, phy-*f fiognomy, and chiromancy, he would have desee ferved better of the republic of letters. 66 too great curiofity in these matters made the " vulgar look upon him as a magician; though

³⁰ Tanner de Script. Ang. p. 526.

³¹ Mackenzie's Lives of Scots Writers, vol. 1. p. 211.

[&]quot; none

" none speaks or writes more respectfully of God " and religion than he does 32." So strong were the convictions of his countrymen that he was a magician, that Dempster assures us, many people in Scotland in his time dared not so much as to touch his works 33.

After the death of his illustrious patron, the em- His death. peror Frederick II. A. D. 1250, our author returned into Britain, where he is faid to have lived to a very great age, and to have died A. D. 1290 34.

John Duns Scotus was fo famous for his genius John Dune and learning, that England, Scotland, and Ireland, have contended for the honour of his birth 35, This controversy I shall not take upon me to determine; though his name feems to favour the opinion, that he was born at Duns in Berwickshire. or the Merse, in Scotland 36. The precise time of his birth is also unknown; but from feveral circumstances it appears most probable, that it was about A. D. 1265. He entered, when he was very young, into a monastery of the Franciscans at Newcastle; who, discovering the quickness of his genius, fent him to Merton college in Oxford, to profecute his studies 37. In this famous seat of learning, our young scholar soon became conspicuous by the rapidity and facility with which he advanced in the acquisition of all the sciences.

Scotus.

parti-

³⁷ Bruckeri Hift, Philof. tom. 3. p. 826.

particular, he greatly excelled all his contemporaries in the admired art of logical disputation, by the quickness and subtilty of his distinctions, and the fecundity of his invention. He made great progress in natural and moral philosophy, and in all the different branches of mathematical learn. ing; after which he applied to the study of the civil and canon law, and school-divinity 38. When our author had for some time enjoyed a fellowship in his own college, he was advanced to the theological chair in the university A.D. 1301: a station for which he was admirably fitted, and in which he had an opportunity of displaying, to great advantage, the immense stores of learning which he had amassed. Accordingly we are told that his lectures on the fentences of Peter Lombard were attended by incredible multitudes of hearers, and received with great applause. For at the time when these lectures were delivered, we are affured, that there were no fewer than thirty thousand students in the university of Oxford, of whom many were attracted by the fame of our professor's eloquence and learning 39. These admired lectures have been printed, and, together with some comments upon them, fill fix folio volumes 40.

Removes to Paris. Oxford was not long permitted to enjoy the advantage of fo popular a professor. For he was

³⁹ Bruckeri Hist. Philos. tom. 3. p. 826. Cave Hist. Lit. Append. p. 2

³⁹ Bruckeri Hist. Philos. tom. 3. p. 826. A. Wood, l. 1. p. 30. Cave, Append. ad Hist. Lit. p. 2.

⁴⁰ Du Pin, cent. 14. chap. 5.

commanded by the general of his order, A. D. 1304, to remove to Paris, to defend his doctrine of the immaculate conception of the virgin Mary which was impugned by the divines of that city. This he performed with great applaule, in an affembly of the university of Paris, called for the determination of that important question. adversaries of the immaculate conception collected all their force on this occasion, and produced no fewer, it is faid, than two hundred objections to that doctrine. "Scotus heard them with great composure; and in his reply, he recapitulated " all their objections, and refuted them with as " much ease as Sampson broke the cords of the 66 Philistines; after which he proved, by many frong arguments, to the amazement and con-" viction of all his hearers, that the most holy « Virgin was conceived without the stain of original fin. The university of Paris bestowed on " him the title of the fubtile Doctor, as a reward " for his victory in this famous dispute "." One of this illustrious affembly, who was a stranger to the person, but not to the fame, of Scotus, was fo much charmed, that he cried out,-" This is either an angel from heaven, a devil from hell, " or John Duns Scotus"."

When Scotus had continued about four years at Removes Paris, he was fent by Gonfalvo, the general of to Cothe Franciscan order, to Cologne, A. D. 1308,

⁴¹ Bulæi Hist. Univ. Paris. tom. 4. p. 70. 42 Hugo Cavillus in Vita J. Duns Scoti.

to found an university in that city, in imitation of that of Paris, and to defend his favourite doctrine of the immaculate conception against the disciples of Albert the Great 43. He met with a most honourable reception at Cologne; but died soon after his arrival, November 8, A.D. 1308, in his forty-fourth year, or, according to some historians, only in the thirty-fourth year of his age 44,

Praised.

Few men of learning have been fo much admired by their contemporaries, or loaded with fuch extravagant praises by their followers, who from him were called Scotists, as John Duns Scotus. It may not be improper to give one example of the pompous strain of these panegyrics: " He was so consummate a philosopher, that he could have been the inventor of philosophy, if " it had not before existed. His knowledge of all '" the mysteries of religion was so profound and 56 perfect, that it was rather intuitive certainty "than belief. He described the divine nature as " if he had seen God;—the attributes of celestial " spirits, as if he had been an angel;—the felici-" ties of a future state, as if he had enjoyed them; "-and the ways of providence, as if he had " penetrated into all its fecrets. He wrote fo " many books, that one man is hardly able to f' read them, and no one man is able to under-" stand them. He would have written more, if he had composed with less care and accuracy.

⁴³ Bulæi Hist. tom. 4. p. 970.

⁴⁴ Id. ibid. Hugo Cavillus in Vita.

[«] Such

"Such was our immortal Scotus, the most inge-46 nious, acute, and subtile of the fons of men 45." It is related of him, that he sometimes fell into fuch profound meditations, that he remained several hours motionless, and infensible to all external objects 46. In a word, it may be affirmed, without exaggeration, that few men ever possessed a more fertile invention, a more retentive memory, a more acute and penetrating genius, or a more unremitting application to study, than John Duns Scotus; but, unfortunately for him, and for the world, all those noble talents were misapplied and waited on the subtilties of school philosophy and the absurdities of school-divinity. Considering the shortness of his life, he was one of the most voluminous writers that ever lived. Many of his writings have been feveral-times printed; but the most complete edition of his works is that which was published by Wadingus, at Lyons, A. D. 1639, in twelve volumes folio 47. These works, which were so highly admired that about twenty different authors wrote commentaries upon them, are now configned to dust, and almost quite neglected.

William Ockham, one of the most distinguished William disciples of John Duns Scotus, and the founder of a fect of schoolmen called Qckhamists, was born at Ockham, in Surry, about A.D. 128048.

⁴⁵ Bruckeri Hist. Philof. tom. 3. p. 828. n.

⁴⁶ Hugo Cavillus in Vita J. D. S. ch. 3. 47 Du Pin, cent. 14.

⁴⁸ Bruckeri Hift. Philosoph. tom. 3. p. 846.

he was very young, he entered into the order of St. Francis, and profecuted his studies with great ardour and success, first at Oxford, and afterwards at Paris 49. In both these universities he was a constant hearer and great admirer of Scotus; but being of a bold inquisitive spirit, he did not yield an implicit faith to all the doctrines of his illustrious master. On the contrary, he impugned some of his opinions with so much vigour and success, that he obtained many followers, who, on that account, were called Ockhamists; and sometimes Nominals, because they waged a long and sierce war against another sect of schoolmen, called Realists, about certain metaphysical subtilities which neither of them understood 50.

Defends the emperor against the pope.

Ockham acted a very conspicuous part in those violent disputes which disquieted the christian world during the pontificate of John XXII. from A. D. 1316 to A. D. 1334; and in all those disputes he opposed the heretical principles and ambitious pretensions of the pope with great vivacity and courage. He was made provincial of the Franciscans in England, in a general assembly of the order, A. D. 1322; and in that assembly he very boldly defended the principles of that party of the Franciscans who were called the Spiritual Brethren, which the pope had condemned as heretical, by two solemn decrees. He also impugned, with much

⁴⁹ Leland de Script. Britan. tom. 2. p. 323.

⁵¹ Id. ibid. p. 847. Du lin, cent. 14. ch. 3.

vehemence, the favourite doctrine of John XXII.—that the fouls of good men were not admitted to the vision of God, and the happiness of heaven till after the resurrection. His holiness was so highly enraged at this presumption, that he pronounced the terrible sentence of excommunication against our author; which obliged him to live in great privacy for several years. In this retirement he composed some of his works, particularly his Compendium of the heresies of pope John XXII. of which he enumerated no sewer than seventy-seven *2.

Our author at length found a powerful protector in Lewis of Bavaria, emperor of Germany, in whose court he took shelter, A.D. 1328 32. prince, who had been long and cruelly perfecuted, and at last deposed and excommunicated, by the pope, received his fellow-fufferer in a very gracious manner, and appointed him one of his privy coun-In return for these favours. Ockham fellors. published several treatises in defence of the emperor, and in opposition to that favourite maxim of the papal court, which had been boldly avowed by Boniface VIII. A. D. 1301,—That all emperors, kings, and princes, are subject to the supreme authority of the pope, in temporals as well as spirituals "." In opposition to this dangerous doctrine, which was not very fuitable to the humble title of the Servant of Servants, Ockham maintained,-That the em-

Retires to the emperator's court.

s Id. ibid.

Tanner de Script. Angl. &c. p. 555.

⁵⁴ Bul. Hist Univer. Parif. tom. 4. p. 7.

peror was subject to none but God in temporals. The learned Selden gives the following high character of one of our author's political treatises, published on this occasion.—" It is a most learned and ingenious work, which merits the highest commendations; and in my opinion, it is the very best performance published concerning the limits of the spiritual and temporal powers." So much did these spirited publications of our author contribute to support the emperor's cause, that he used to address that prince in this familiar manner: " If you will defend me by your sword, " I will defend you by my pen 55."

Obliged to recant.

During the life of the emperor, his protector, Ockham smiled in safety at the impotent rage of three successive popes, John XXII. Benedict XII. and Clement VI. who denounced the most direful anotherms against him. But after the death of that prince, which happened October 11, A. D. 1347, he found himself no longer in a capacity to brave the papal thunders, and was constrained to court a reconciliation with the church by the most humiliating submissions. Some literary historians indeed say, that he died about six months before the emperor, his patron, April 10, A. D. 1347⁵⁷. But this is evidently a mistake; for, by the intercession of the Franciscan order, he obtained absolution from Clement VI. by a bull dated at Avig-

⁵⁵ Selden de Synedriis, l. 1. C. 10. p. 228.

⁵⁶ Wharton, apud Cave, Hist. Lit. Append. p. 26.

⁵⁷ Tanner, p. 556.

non, June 19, A. D. 1349, upon condition of renouncing all his former herefies, and swearing implicit submission to every papal decision and mandate for the future ¹⁸. He did not long survive this mortifying abjuration of all those opinions which he had laboured with so much ardour to establish, dying at Capua, in Italy, September 20, A. D. 1350 ⁵⁹. He was unquestionably a man of genius, industry, and learning, and would have been happier and more useful if he had lived in better times. A catalogue of his numerous works may be seen in the authors quoted below ⁶⁰. According to the custom of the age in which he flourished, he was honoured with the pompous title of the singular and invincible Doctor.

The most important events in the life of the famous Dr. John Wickliff, who is well intitled to a distinguished place in the history of his country, for his noble efforts to deliver it from the intolerable tyranny of the church and court of Rome, have been already mentioned; and therefore a very brief account of his personal history, character, and literary labours, will be sufficient in this place 61. He was born in the parish of Wickliff, near Richmond, in the county of York, about A. D. 1324 62; and educated at Oxford, where he merited the highest academical honours, obtained successively the government of Baliol and

John Wickliff.

Canterbury colleges, and was advanced to the professorship of divinity 62. His theological lectures were delivered to crowded audiences, and received with incredible applause; which contributed not a little to disseminate his doctrines, which were very different from those of the church at that time 64. In particular he combated with great fpirit the exorbitant power and ambitious pretenfions of the court of Rome in temporals as well as spirituals; and with equal spirit he opposed the encroachments of the begging friars, who were the great supporters of the papal power 65. entered into holy orders, and obtained, first, the living of Filingham in Lincolnshire, and afterwards the rectory of Lutterworth in Leicestershire, he further propagated his opinions, by his frequent, eloquent, and popular preaching 66. his numerous writings in the English language he still further diffused the knowledge of his doctrines, and exposed the sloth, hypocrify, and other vices of the mendicant friars, together with the various corruptions of the court and church of Rome. a word, fuch was the fuccess of the teaching, preaching, and writings, of our author, that a contemporary historian, who appears to have been: his most inveterate enemy, assures us,-" that more than one half of the people of England 66 became his followers, and embraced his doc-

⁶³ Wharton, p. 50. 64 Leland, p 379.

⁶⁶ Knighton, col. 2663. Walfing. p. 304, &c.

[&]quot; trines."

<s trines 67.33 The violent, opposition which he encountered from the pope and clergy, the powerful support he received from the duke of Lancaster, and other great men among the laity, as well as the time and manner of his death, have been already mentioned 68. But it may not be improper to take notice in this place, that the malice of his enemies did not permit him to remain in quiet in his grave. In consequence of a decree of the council of Constance, and a bull of pope Martin V. directed to Robert Fleming bishop of Lincoln, his bones were taken up and burnt, and the ashes thrown into a rivulet 's: an act of impotent malevolence which is hardly credible!

The pope and clergy not only perfecuted the Calumiies person of Dr. Wickliff during life, and his ashes clergy, after death, but did every thing in their power to blacken his character and destroy his works. two monkish historians, Walsingham and Knyghton, his contemporaries, have given him almost every opprobrious name in the Latin language; but have not been able to accuse him of any immorality 7°. His doctrines were condemned by various councils after his death; and his works which contained these doctrines were burnt whenever they could be found. Subynco archbishop of Prague in Bohemia (where the doctrines of Wickliffhad made great progress), publicly burnt more

⁶⁷ Knyghton, col. 2664.

⁶³ See chap. 2. \$ 2.

⁶⁹ Lewis, p. 110.

⁷⁰ Walfing. p. 205. 208. 246. 283. Knyghton. col. 2644-2661.

than two hundred volumes of his works that were beautifully written, and finely bound and ornamented 71. About the same time a great number of his books were publicly burnt at Oxford, by a decree of the university, and under the inspection of the chancellor 72. But all these attempts to destroy the works of Wickliss were inessectual; and we have good reason to believe that some copies of all his numerous publications escaped. The learned bishop Bale, who flourished in the fixteenth century, affirms, "That he had feen " about one hundred and fifty treatifes of Dr. "Wickliff, some of them in Latin, and others in "English, besides his translations of several 66 books 73." His translation of the bible into English was one of his greatest and most useful works: for a catalogue of which works the authors quoted below may be consulted 74.

Praifes.

The endeavours of the pope and monks to blacken the character, and diminish the same, of Dr. Wickliss were as inessectual as their attempts to destroy his works. The superiority of his genius and learning was so conspicuous, that it was acknowledged by his greatest enemies. The historian Knyghton, who hated him heartily for his attempt to reform the church, is constrained to "own, that no man excelled him in the strength

^{.71} Æneas Sylvius Hist. Bohem. chap. 35.

⁷² A. Wood, l. 1. p. 204.

⁷⁴ Id. ibid. Wharton, p. 53. Bale, cent. 6. c. 1.

and number of his arguments; and that he excelled all men in the irrefiftible power of his eloquence in disputation 75." Walden, who was his most inveterate enemy, acknowledged in a Letter to pope Martin V. " that he had often food amazed beyond measure, at the excellence of his learning, the boldness of his affertions, the exactness of his authorities, and the strength of 66 his arguments 76." The following character of this great and good man was drawn by an able hand, and appears to be just: " Dr. John Wick-66 liff was a man, than whom the christian world " in these last ages hath not produced a greater.— "He excelled all his contemporaries in all the different branches of theological learning, and in the knowledge of the civil and canon law-46 His heart was inflamed with the most ardent love " to God, and good-will to men; which excited " him to the most strenuous efforts to restore the church to its primitive purity. The eminence " of his piety and virtue his greatest adversaries er never dared to call in question, and to the su-66 periority of his natural and acquired abilities they " have been compelled to bear testimony "."

Several other school-divines and philosophers shourished in Britain, in the thirteenth and sour-teenth century, and for a season enjoyed a considerable share of literary same; but as their works

⁷⁵ Knyghton, col. 2664.

⁷⁶ Bale, cent. 6. c. 1. p. 456. Wharton. p. 52.

²² Bale, cent. 6. c. 1. p. 456. Wharton, p. 524

are now neglected, it would be improper to fwell this fection with their history.

Histori-

The British historians of this period were very numerous; but only a very sew of them were so conspicuous for their abilities as to merit a place in the general history of their country; and of these sew it will be sufficient to give a very brief account.

Matthew Paris.

Though Matthew Paris was unquestionably one of the most faithful and best informed of all the English historians of the thirteenth century, his own personal history is very impersectly preserved; and is chiefly to be collected from his own writings. We are not informed of the particular time or place of his birth, nor from what family he was descended. The first circumstance of his life we know with certainty is, that he took the habit of a monk, in the abbey of St. Alban's, January 21, A. D. 121778. In this abbey he continued long, and became fo famous for his learning, piety, and virtue, that he obtained the esteem and confidence of feveral great princes. With his own fovereign Henry III. he appears to have been on a very friendly and familiar footing; not only employed in his fervice, but entrusted with his fecrets, invited to his table, favoured with long and frequent conversations, and even affifted in the composition of his history of England 79. "He who wrote this " (favs he) was almost constantly with the king in

⁷⁸ M. Paris, edit. Parifiis, A. D. 1644. Præfat. p. 3.

⁷⁹ M. Paris, Hift. Angl. p. 494. 636.

- his palace, at his table, or in his closet; and " that prince guided his pen in writing in the most " diligent and condescending manner so." same time our author stood in the highest point of favour with Haco king of Norway, a wife and learned prince, with whom he corresponded by letters, and for whom he transacted some important affairs in London, to his entire fatisfaction 81. At length, when the monks of that kingdom had become extremely ignorant and diforderly, Matthew Paris was esteemed the most proper person in the church to be employed in an attempt to instruct and reform them. Accordingly in compliance with a bull from pope Innocent IV. and an earnest application from the king of Norway, he made a voyage into that country, A. D. 1248, where he spent about a year in restoring monastic discipline to its primitive strictness and regularity 82. ing his residence in Norway, he acted also as ambassador for Lewis IX, king of France, whose friendship he had gained by his learning and in-But though our author was a favourite, he was not a flatterer, of kings. On the contrary, he expostulated with and admonished his own sovereign with much freedom, when he acted imprudently or unjustly 4. When Henry III. had granted, by charter, to one of his courtiers, a liberty of hunting in the lands belonging to the

³⁴ Jd. p. 524 col. 2.

abbey of St. Alban's, directly contrary to the privileges which he had before granted by charter to that abbey, our author tells us, that he went boldly to the king, and reproached him for this unjust proceeding; to which the king replied, that he had only imitated the pope, who daily revoked the privileges he had granted, and bestowed them upon others, by the clause of non obstante in his No historian who hath recorded the transactions of his own countrymen in his own times, can be compared with Matthew Paris for intrepidity. He censured without any ceremony, and in the plainest language, the vices and follies of persons of the highest rank and greatest power. Though he was a monk, he hath painted the infatiable avarice, intolerable tyranny, unbounded luxury, and abandoned perfidy of the court of Rome, in stronger colours than any protestant writer hath done 86. From all his writings he appears to have been a man of genius, taste, and learning. "He was (fays a literary historian) an " elegant poet, an eloquent orator, and acute logi-" cian, a subtile philosopher, a solid divine, a « celebrated historian, and, which crowned the of whole, a man justly famous for the purity, inte-" grity, innocence, and simplicity of his man-" ners "." In his leifure hours he amused himfelf with the study and practice of the fine arts;

⁸⁷ l'it's Relat. Scriptor. script. 367.

and (if we may believe the historian of his own abbey) he was an exquisite sculptor in gold, filver, and other metals, and the best painter of the age in which he flourished ". This virtuous, learned, and ingenious person paid the last debt to nature, A. D. 1259, at St. Alban's, where he had resided above forty years, and never obtained any higher office than that of historiographer 89.

The theological works of Matthew Paris have Works. shared the same fate with those of many of his contemporaries; but his historical labours have been more fortunate, and have fecured the grateful remembrance of posterity to their author. greatest and most valuable of these historical works is entitled Historia Major, which is a very full history of England, from the Conquest, A. D. 1066, to the 43d of Henry III. A. D. 1259. In the first part of that work, from the Conquest to A. D. 1235, our author was much indebted to the labours of Roger de Wendover, his predecessor in the office of historiographer in the abbey of St. Alban's, and it was continued after his death to A.D. 1273, by William Rishanger his fuccessor in that office 90. For the honour of his own abbey, our author wrote the lives of the two Offas kings of Mercia (of whom Offa II. was the founder of that abbey), and also the lives of the twenty-three first abbots of St. Alban's. works he subjoined Additamenta (additions), con-

88 Tanneri Biblioth. Britan. p. 573.

89 Id. ibid..

taining

⁹º Id. ibid. p. 757. 634.

taining certain facts, papers, letters, speeches, &c. which had not come to his knowledge in due time, or which he had neglected to infert in their proper places. The above historical compositions have been feveral times printed 91, and will be perused with pleasure by every lover of English history and antiquities, who can forgive our author for believing and introducing fo many ridiculous miracles, apparitions, predictions, &c.; because that kind of credulity was the folly of the times rather than of the man. The first part of Matthew of Westminster's Flowers of History, from the creation of the world to the conquest of England, is faid to be almost an exact transcript of a work of Matthew Paris which hath never been printed. Besides all these, our author made an abridgment of his Historia Major, or Larger History of England, with the title of Historia Minor; which is still preserved in MS 92.

Thomas Wykes. We know still less of the personal history of Thomas Wykes than of his contemporary Matthew Paris. He was a regular canon, of the order of St. Augustine, in the abbey of Osney, near Oxford; and improving his favourable situation for the acquisition of learning, became famous for the variety and extent of his erudition. Besides several other works on different subjects, he composed a history or chronicle of England, from the

Conquest,

⁹² Tanner, Bibliothec. p. 572.

Conquest, A. D. 1066, to A. D. 1304, soon after which period it is probable he died 93.

Walter Hemmingford was a monk in the abbey of Gisburn, in Yorkshire, of the same order with Thomas Wykes, and also wrote a history of England, nearly of the same period, beginning at the Conquest, and ending A. D. 1347, in which year he died 94. We do not so much as know with certainty to what monasteries John de Trokelowe, and Henry de Blaneforde, two monks who wrote histories of the reign of Edward II. belonged, and therefore they are mentioned here only to recommend their works, together with that of the anonymous monk of Malmsbury, on the same subject, to the attention of English antiquaries and historians, as containing many curious particulars which are nowhere else to be found 95.

Hemming. ford.

Robert de Avesbury, who was register of the archbishop of Canterbury's court, composed a history of England in his own times, with the following title:—"Mirabilia gesta Magnissici Regis" Angliæ Domini Edwardi Tertii post Conquestum, Procerumque; tactis primitus qui"bussam gestis, in tempore patris sui Domini

Our author was probably prevented by death from finishing his plan; for his history reaches only to the thirtieth of Edward III. A.D. 1356. He appears to have been at great pains to procure the most authentic information; and his work is valuable for the sincerity with which it is written, and the original papers it contains ⁹⁶.

Nicholas Trivet. Nicholas Trivet, son of fir Thomas Trivet of the county of Norfolk, was born about A. D. 1258, and in his youth became a Dominican friar in London. Having a genius and taste for learning, he prosecuted his studies with great spirit and diligence, first at Oxford, and afterwards at Paris. Soon after his return to England, he was chosen prior of his monastery, and discharged the duties of that office, with great honour to himself and

⁹⁵ Roberti de Avesbury Historia, a Tho. Hearn edit. Oxon. A. D. 1720.

advantage to the fociety, to the time of his death, A. D. 1328. He was a voluminous writer on various subjects in philosophy and divinity; but he is introduced in this place because he was the author of Historical Annals from A. D. 1130, to A. D. 1307 97. Of this work he gives the following account in his preface: "When I ftudied at Paris, I read the histories of France " and Normandy with great care, and faithfully extracted out of them every thing that related to "the English nation. From these extracts, together with what I collected from our English chronicles,—what came to my own knowledge, and what I learned from the information of men " worthy of credit,—I have composed the following history of the kings of England of the Plantagenet family, from Henry II. to our own " times. But though I have bestowed my chief 46 attention on the affairs of England, I have occasionally introduced such accounts of the trans-« actions of the contemporary popes, emperors of "Germany, kings of France, and some other ef princes, as had come to my knowledge, in order to render my work more univerfally useful and agreeable 98.4"

It would be tedious to many readers to peruse the short memoirs which remain of the other historians of this period, as of Matthew of Westminster, Ralph Higden, Henry Knyghton, John

⁹⁷ Leland de Script. Britan. t. 2. p. 326.

⁹⁸ Nicolai Triveti Annal. edit. Oxon. 1719. p. 2.

244

de Fordun, Adam de Merimuthe, Thomas Stubbs, William Thorn, &c. &c.; and therefore such as wish to be acquainted with them, are referred to the authors quoted below 99.

Poets.

Poetasters abound in every age; but real and great poets, who do honour to their country, and merit a place in its history, are commonly very few. Of such excellent poets, who were also men of uncommon worth and learning, I know only three, viz. John Gower, Geoffrey Chaucer, and John Barbour, who flourished in Britain in the present period.

John Gow-

That John Gower, or rather fir John Gower, was of an ancient and opulent family is highly probable; but where that family was feated is not certainly known 100. He was born about A.D. 1320, and having received a learned education, and attained a proper age, he engaged in the study of the law at the Inner Temple, with such diligence, that he became eminent in his profession 101. His application to these severer studies did not divert him from courting the muses at his leisure-hours, and that with so much success, that he became one of the most admired poets of the age in which he flourished. Besides several smaller pieces, he composed three poems of considerable length, in three different languages, Latin, French, and English. To these poems he gave the three

⁹⁹ Leland, Bale, Pits, Tanner, &c.

³⁰⁰ Biograph. Britan, 1st edit. vol. 4. p. 2242.

¹⁰¹ Tanner, p. 335.

Following fanciful and pedantic titles:—Speculum Meditantis,—Vox Clamantis,—Confessio Amantis 102. Speculum Meditantis, written in French, is a moral poem, recommending fidelity and mutual love to married persons, by examples out of various histories. Vox Clamantis, written in Latin, is a historical poem or chronicle of the insurrection of the commons in the reign of Richard II. The solumnity of the style, and lowness of the subject of this poem, gives it in some places a burlesque appearance, as in the following catalogue of the leaders of the insurgents:

Watte vocat, cui Thomæ venit, neque Symme retardat,
Bitteque, Gibbe, simul Hykke, venire jubent.
Colle furit, quem Gibbe juvat nocumenta parantes,
Cum quibus ad damnum Wille coire vovit.
Grigge rapit, dum Daive strepit, comes est quibus Hobbel
Lorkin, et in medio non minor esse putat.
Hudde ferit quos Judde terit, dum Tibbe juvatur
Jakke domos que viros vellit, et ense necat, &c. &c.

These two poems are still in MS. Confession Amantis, written in English at the desire of Richard II. is a poetical system of morality, illustrated by many amusing tales, happily invented and naturally introduced. This poem hath been several times printed 103. Our author hath lest various specimens of his skill in divinity, logic, natural philosophy, and alchymy. He appears to have been fond of writing; and laments, in a very pathetic strain, that by the failure of his sight in his

202 Tanner, p. 335.

103 Biographia, vol. 4. p. 2844.

old age, he was constrained to lay aside his pen 104. He died A. D. 1402, and was buried in the conventual church of St. Mary Overie, in Southwark, which he had rebuilt chiesly at his own expence. Upon the whole, sir John Gower was evidently a man of uncommon genius, extensive learning, and amiable manners, one of the fathers of English poetry, and one of the first who wrote with any considerable success in the English language.

Geoffrey Chaucer.

Geoffrey Chaucer, the contemporary and intimate friend of Gower, was born in London about A. D. 1328; but all attempts to discover the names and rank of his parents (though they were certainly neither obscure nor indigent), have been unsuccessful 105. When he had spent some years in profecuting his studies, first at Cambridge, and afterwards at Oxford, for his further improvement, he visited France, and some other foreign countries; and on his return from his travels, he became a student of law in the Middle Temple 106. But this study not being agreeable to his taste, he resolved to try his fortune at court; for which he was admirably qualified, being remarkably handfome in his person, elegant in his manners, an univerfal scholar, and an admired poet. cordingly obtained the honourable place of page to Edward III. A. D. 1359, when that illustrious

¹⁰⁴ Biographia, vol. 4. p. 2246.

²⁰⁶ Bale, p. 525. Leland, p. 419.

prince was in the fummit of his prosperity, and the English court in its highest splendour, adorned by the captive kings of France and Scotland 107. In this station he rendered himself so agreeable to his royal master, that he obtained many substantial marks of his favour, and enjoyed an income of no less than one thousand pounds a-year, equivalentto twelve thousand pounds at present 108. flourishing state of his affairs, he married Philippa Rouet, fifter to the famous Catharine lady Swynford, then the mistress, and afterwards the wife, of John of Gaunt, duke of Lancaster, the king's third By this marriage a connection which he had formed with the duke of Lancaster was much strengthened, and for some time contributed to his promotion; but afterwards involved him in no little trouble, by engaging him in all the political intrigues of that ambitious prince. In particular, the duke of Lancaster having espoused the cause of Wickliff, from political views, and out of hatred to the clergy, our author engaged with warmth, and from principle, in the same cause. In consequence of this, having espoused the party of John Comberton mayor of London, A. D. 1382, a zealous Wickliffite, and that party having been ruined by the superior power of the court and clergy, Chaucer, with some others, escaped to the continent. Here he lived privately feveral years, till he had spent his whole estate in sup-

¹⁰⁷ Chaucer's Life, prefixed to his Works, edit. 1721.

109 Life of Chauser.

porting himself and his fellow-exiles; which obliged him to return fecretly into England. after his return, he was apprehended and put in prison; where, by threats and promises, he was prevailed upon to disclose the secrets of his party, by which he obtained his liberty, but brought upon himself an unsupportable load of calumny 110. In this deplorable reverse of fortune, our author retired to Woodstock, and gave vent to his melancholy in that sweet plaintive performance,—The Testament of Love; -which begins in this manner:-" Alas! Fortune, alas! I that fome tyme in delicious houres was wont to enjoy blifsful -"froundes, am now dryve, by unhappy hevineffe, " to bewaile my fondrie yvels in tene "." When under this cloud, A. D. 1391, he composed another of his profe works, intitled,—" The con-" clusions of the Astrolabie,—for the use of his " fecond fon Lewis:"—a work which discovers an extensive knowledge in astronomy, with an admirable faculty of communicating that knowledge to a child only ten years of age "2. A few years after this, our author's affairs began to take a more favourable turn. His ancient friend and patron, John of Gaunt duke of Lancaster (now become his brother-in-law, by his marriage with lady Swynford), having, after a great variety of adventures, recovered his influence at the court of England, procured him feveral grants from the

ito See Chaucer's Testament of Love, p. 487-495.
III Id. p. 479.
III Chaucer's Works, p. 439.

crown; which enabled him to spend the last years' of his life in ease and plenty, at his seat of Dunnington castle, near Newbury 123. On the accession of Henry IV. the son of his late brother and patron the duke of Lancaster, he found it necessary to make a journey to London, where he died, October 25, A. D. 1400, in the feventy. third year of his age 124. Whoever reads the works of Chaucer with attention, will be furprifed at the variety and extent of his learning, as well as charmed with the fertility of his invention, the fweetness of his numbers (for the times in which he lived), and all the other marks of a great and cultivated genius. The writer of his life prefixed to Mr. Urry's edition of his works, hath given him the following character, and produced fufficient evidence that he deserved it: " In one word, 46 he was a great scholar, a pleasant wit, a candid critic, a sociable companion, a stedfast friend, " a grave philosopher, a temperate œconomist, es and a pious Christian." Should such a man ever be forgotten?

John Barber, or Barbour, an eminent divine, John Barhistorian, and poet, was born in the city of Aber-bour. deen about A. D. 1330 115. Having received a learned education, he entered into holy orders, and was promoted by king David II. to the archdeaconry of Aberdeen, A. D. 1356. His love of learning was fo strong, that he continued to pro-

fecute

Change in the univerlities.

A very great and advantageous change in the state of the two universities of England took place in the present period, and merits our attention. In former times the teachers and scholars lodged and studied in private houses or halls, which they rented from the citizens. This was attended with many inconveniencies, and gave occasion to frequent quarrels between the scholars and citizens, about the rents of houses 3. Various methods were employed to prevent these quarrels, which difturbed the peace and even threatened the destruction of the universities. In particular, Henry III. A. D. 1231, appointed two respectable citizens, and two masters of arts, to be chosen annually, and invested with authority to determine all disputes between the citizens and scholars, about the rents of houses. But this, and all other methods for preferving peace between the townsmen and scholars, while this occasion of contention continued, proved ineffectual. At length, fome generous persons (determined to deliver the members of the universities from their too great dependence on the townsmen) purchased or built large houses, and admitted both teachers and scholars to refide in them, without paying any rent. Those munificent friends of learning soon discovered, that some ingenious scholars admitted into their houses were but ill provided with the means of rewarding their teachers, purchasing

³ A. Wood, l. r. p. 84. 86. 92.

⁴ Fuller's Hift. Cambridge, p. 10.

books, and procuring other necessaries; which induced them and others to enlarge their charity, and to endow those houses with lands, tenements. and revenues, for the maintenance of a certain number of studious men and youth. By these steps the building and endowing colleges became the prevailing taste of the rich and generous in this period, as building and endowing monasteries had been in some former periods. In consequence of this prevailing tafte, several noble halls and colleges were erected and endowed, in both the universities of England, chiefly between the middle of the thirteenth, and the middle of the fourteenth century.

In Oxford the following colleges were founded Coll ges in in this period, viz. University college, Baliol college, Merton college, Exeter college, Oriel college, Queen's college, and New college; of each of which it is proper to give a very brief account.

If University hall or college was founded and University endowed by Alfred the Great, that foundation was overturned, and those endowments were dissipated, long before the beginning of this period. William archdeacon of Durham, who bequeathed three hundred and ten marks to the university, and died A. D. 1249, may be esteemed the founder of the present college, as some tenements on which it was built, and with which it was endowed, were purchased with that money 5. This

5 A. Wood, lib. 2. p. 56.

fociety, when it was first formed, about A. D. 1280, was very small, consisting only of four masters of arts; but it gradually encreased, both in numbers and revenues, by the successive donations of many generous benefactors.

Baliol college.

John Baliol, father of that unfortunate prince John king of Scotland, formed and made some progress in the design of sounding Baliol college, about A. D. 1268; and that design was perfected by his widow the lady Dervogilla, from whom her son John Baliol derived his title to the crown of Scotland.

Merton college.

Walter Merton bishop of Rochester, sounded a college for twenty scholars, and three priests, at Maldon in Surry, A. D. 1264, and about sour years after he removed that society to Oxford, where he had provided a place for their reception, which hath ever since that time been denominated. Merton college.

Exeter college.

Walter Stapleton, bishop of Exeter, began, about A. D. 1315, to execute a design which he had formed of founding a hall or college in Oxford; and in a few years, with the assistance of Peter de Skelton a clergyman, he accomplished that design. The name of this foundation was at first Stapleton hall; but it was afterwards changed to Exeter college, by a bull of pope Innocent VII 10.

Oriel college. Oriel college was founded by Edward II. and his almoner Adam de Brom, about A. D. 1324.

⁶ A. Wood, lib. 2. p. 57, 58, 59. 7 Id. ibid. p. 69, 70. 8 Id. ibid. p. 89. 9 Id. ibid. p. 93. 10 Id. ibid. p. 94.

It was at first called the Hall of the Blessed Virgin of Oxford, and derived its present name from a capital messuage bestowed upon it by Edward III ".

Robert Eglesfield, who was descended of an Queen's ancient family in the county of Cumberland, and chaplain to queen Philippa, confort of Edward III. founded Queen's college, A. D. 1340, chiefly for the benefit of his countrymen of the counties of Cumberland and Westmorland. He gave his college its name in honour of queen Philippa, who had very much encouraged and affifted him in that expensive undertaking 12.

The illustrious William of Wykeham bishop of New collinge. Winchester, soon after his advancement to that see, A. D. 1366, formed the design of founding two colleges, one at Winchester, in which young scholars might receive the first part of their education: and another at Oxford, into which they might be transplanted, and their education perfected. Having spent several years and considerable fums of money in purchasing certain tenements in Oxford, he laid the first stone of his college there for a master and feventy scholars, March 5, A. D. 1379, and finished the fabric A. D. 1386. In his foundation-charter he gave it the name of Seinte Marie College of Wynchestre in Oxenford; but in common use it hath been constantly called New College 13. Soon after he had finished this great work, he built and endowed his college at Winchester.

college.

¹¹ A. Wood, lib. 2. p. 103, 104. 15 Id. ibid. p. 113.

³³ Id. ibid. p. 126-130.

Colleges in Cambridge. In Cambridge the following halls and colleges were founded in this period, viz. Peter house, Michael college, University hall, King's hall, Clare hall, Pembroke hall, Corpus Christi college, Trinity hall, Gonvil hall.

Peter house. Hugh Balsham sub-prior and afterwards bishop of Ely, purchased some tenements in Cambridge, about A. D. 1256, in order to sound a college; and though he met with various difficulties, which retarded the sull execution of that design, he still continued to prosecute it; and at length, about A. D. 1282, the building was sinished for the reception, and endowed for the maintenance of one master, fourteen sellows, two bible-clerks, and eight poor scholars 14.

Michael college. Harvey de Stanton canon of York and Wells, and chancellor of the exchequer to Edward II, founded and endowed a college about A. D. 1324, which he dedicated to St. Michael the archangel 15. This college was taken into Trinity college, founded by Henry VIII.

University hall.

University hall or college was founded by Richard Badew, chancellor of the university of Cambridge, A. D. 1326. But this college was hardly ever completed, and of short duration 16.

King's hall. King Edward II. for some years maintained thirty-two scholars at the university of Cambridge, and designed to have sounded a hall for their

residence.

¹⁴ Stow's Chronicle by Hows, p. 1057. Fuller's Hiftory of Cambridge, p. 30.
15 Stow, p. 1057. Fuller, p. 36.
16 Stow, ibid. Fuller, p. 37.

residence. This design was executed by his son Edward III. who built a very magnificent hall, and endowed it with lands sufficient for the support of a master and thirty-three scholars 17. This hall was united to Trinity college by Henry VIII.

University hall having been burnt down, and Clare hall. its founder Richard Badew unable to rebuild it. Elizabeth de Clare countels of Ulster, one of the sisters and écheiresses of Gilbert de Clare earl of Gloucester, raised it from its ruins about A. D. 1347, added greatly to its revenues, and gave it the name of Clare ball, in honour of her family 18.

Pembroke hall was founded in the fame year Pembroke with Clare hall, by a great but unfortunate lady, Mary de St. Paul, daughter of Guido earl of St. Paul, in France, married to Aymer de Valence earl of Pembroke, who was killed in a tournament foon after his marriage, or, according to some, on his wedding day, June 23, A. D. 1323: His afflicted widow survived him forty-two years. spending the greatest part of her large revenues in pious and charitable works. Among others of that kind, she founded a hall in Cambridge for a master and thirty scholars, which she called by her husband's name and her own, the hall of Valence and Mary; but its most common appellation hath been Pembroke hall 15.

⁷ Stow, p. 1057. Fuller, p. 39.

¹⁸ Stow, p. 1058. Fuller, p. 37.

B Stow, ibid. Fuller, p. 41. Dugdale's Pecrage, vol. 1. p. 777.

Bennet college.

The united guilds of Corpus Christi and St. Mary, in Cambridge, assisted by the patronage of Henry duke of Lancaster, founded a college, about the same time, which they called the college of Corpus Christi and St. Mary; but its most common name hath always been Bennet college, from St. Bennet's church 20.

Trinity hall.

William Bateman bishop of Norwich founded Trinity hall, in Cambridge, about A. D. 1350, for one master, two fellows, and three scholars, who were all to be students of the civil and canon law 21.

Gonvil hali. About the fame time Edmond Gonvil, parson of Terrington and Rushworth, in Norfolk, founded a college in Cambridge, for a master and twenty scholars, which he called *Gonvil ball*, and by his last will lest a considerable sum of money to William Bateman bishop of Norwich, together with directions for perfecting that foundation, which he performed ²².

Almost all the above halls and colleges in both universities were comparatively small at first; but by subsequent benefactions they have become the most magnificent and opulent seats of learning in Europe.

Great number of fludents. The number of scholars in the two universities of England in this period was very great. The famous Richard Fitz-Ralph, archbishop of Armaugh, in an oration against the mendicant friars,

²⁰ Stow, p. 1058. Fuller, p. 44.

²¹ Id. p. 47.

²² Stow, p. 1058. Fuller, p. 50.

which he pronounced before the pope and cardinals, A. D. 1357, made the following declaration: "Even in my time, there were thirty thousand " students in the university of Oxford, and at pre-" fent there are hardly fix thousand; which prodise gious dimunition is chiefly owing to the mendicant friars, who entice and delude so many of the young scholars to enter into their order, that " parents are afraid to fend their children to the " university 23." We shall be more disposed to believe the above declaration, when we confider, that besides all the above colleges that had been lately founded, there were at that time between two and three hundred private halls in Oxford, in which fcholars refided, and almost an equal number of schools, in which they studied and attended lectures; and when we reflect also, that this univerfity was frequented by great multitudes of scholars from Scotland, Ireland, and the continent, as well as by the youth of England and Wales 24.

The two universities of England in this period were frequently disturbed, and sometimes almost ruined, by violent quarrels among the scholars, or between them and the townsmen. In the quarrels among the scholars, the southern English, Welsh, and Irish, commonly formed one party, against the northern English and Scots²⁵. Many of the members of both universities, being desirous of avoiding

Univerfities of Northampton and Stamford,

Bulæi Hist. Univers. Paris. tom. 4. p. 339. A. Wood, lib. 1.

[#] A. Wood, lib. 1. p. 123, &c. Fuller, p. 12.

these quarrels, retired to Northampton, A. D. 1260; and, with the permission of Henry III. began to form a new university. But the people of Oxford and Cambridge found means to prevail upon that prince to dissolve this new university, and to command the members of it to return to the places of their former residence, A. D. 1265²⁶. About thirty years after, the university of Stamford began, and terminated in the same manner ²⁷.

Third university of Eng. land.

So many schools were founded, and so many sciences taught, in London and its environs, in this period, that it was (not very improperly) called a third university 28. Edward III. built a college at Weltminster for the study of divinity, which was called St. Stephen's college, and was dissolved by Henry VIII. A. D. 153029. Archbishop Bradwardine founded a theological lecture in St. Paul's church, in London, A. D. 1344; and the famous John of Gaunt duke of Lancaster built and endowed a college for divines in St. Paul's church-yard 30. But as it would be tedious to enumerate all the schools that were erected in London and its environs in this period, it may be fufficient to refer fuch readers as defire more particular information to the work quoted below 31.

30 Id. ibid.

³¹ Sir George Buc's Discourse of the third University of England.

Soon after the chief courts of justice were firmly Law unifixed at Westminster, in conformity to an article in the Great Charter, a famous school or university for the study of the law was gradually established in the neighbourhood of that place, confisting of feveral colleges, commonly called Inns of Court and of Chancery. These inns or colleges were at first few and inconsiderable; but before the end of our present period, they were become numerous and flourishing. This appears from the following very distinct description of them by sir John Fortescue, who was a student in one of these inns of court about A. D. 1416: "The laws are studied " in a public manner and place -It is fituated " near the king's palace at Westminster, where see the courts of law are held, and in which law-"proceedings are pleaded and argued. st term-time, the students of the law attend in se great numbers, as it were to public schools, and " are there instructed in all forts of law-learning and in the practice of the courts. The fituation 66 of the place where they reside and study is be-"tween Westminster and the city of London.-"There belong to it ten lesser inns, and sometimes more, which are called the Inns of Chan-" cery; in each of which there are an hundred 66 students at least, and in some of them a far greater number, though not constantly residing. "The students are for the most part young men. " Here they study the nature of original and " judicial writs, which are the very first prin-" ciples of the law, After they have made some " progress S 3

se progress here, and are more advanced in years, "they are admitted into the inns of court properly " fo called. Of these there are four in number. 46 In that which is least frequented, there are " about two hundred students.—There is both in se the inns of court, and the inns of chancery, a " fort of an academy or gymnasium, where the se students learn singing and all kinds of music, " dancing, and fuch other accomplishments and fi diversions as are suitable to persons of their quality, " and are usually practifed at court. At other fi times out of term, the greater part apply them-" felves to the study of the law. Upon festival " days, and after the offices of the church are so over, they employ themselves in the study of ff facred and profane history.—I need not be par-" ticular in describing the manner and method " how the laws are studied in those places. " may fay in general, that it is pleafant, and ex-" cellently well adapted for proficiency "." hardly necessary to observe, that the establishment of this law-university was one very happy consequence of fixing the chief courts of justice at one certain place, and contributed not a little to inspire the young nobility and gentry of England (who generally received some part of their education at the inns of court) with a taste for learning.

GREAT BRITAIN.

K 0

CHAP.

History of the Arts in Great Britain, from the death of king John, A. D. 1216, to the accession of Henry IV. A. D. 1399.

SECTION

History of the necessary Arts in Great Britain, from A. D. 1216, to A. D. 1399.

THE most common and capital operations in agriculture, architecture, and other necessary arts, are performed in the same manner, or nearly in the fame manner, through many fucceeding ages, in every country into which they have been introduced. It is not necessary therefore, in a work

ventions. or great improvements in the necesfary arts.

work of this nature, to give a description of these permanent operations in every period, which would occasion many tedious and disgusting repetitions. For this reason it is thought sufficient to give an account only of such new inventions, or considerable alterations in the several arts, in each period, as made their first appearance, and became conspicuous in that period.

No great improvements in agriculture.

It is not to be imagined that very many and great improvements were made in agriculture in the period we are now examining, as the circumflances of the country, and manners of its inhabitants, were unfavourable to fuch improvements. The country was almost constantly involved in war, which diverted the attention of the people, and particularly of the nobility, from the improvement of their lands by agriculture. A taste for . this art was even esteemed dishonourable in a perfon of high rank; and Edward II. was bitterly reproached, as well as much despised, for his fondness for agriculture, and neglect of military exercises. The great barons and prelates, who were the chief proprietors of the foil, kept prodigious quantities of land in their own immediate possession, which they cultivated partly by their flaves or villains, and partly by their tenants, who were obliged to neglect their own farms, and labour for their lords, whenever they were called? Now as these slaves and tenants had little or no

interest in the success of their labours, it is not to be supposed that they were very anxious about performing them in the best manner. form an idea of the quantity of land which some great prelates kept in their own possession by the following account of the stock upon the lands of the bishopric of Winchester, delivered to bishop Wykeham, A. D. 1367, by the executors of his predecessor,-viz. 127 draught-horses, 1556 head of black cattle, 3876 wethers, 4777 ewes, 3541 lambs, besides the sum of 16621. 10s. equivalent to 20,000l. of our money at present, which they paid for the deficiency of that stock 3.

The frequent and very destructive famines Destrucwhich prevailed in Britain in this period have been mines. confidered as presumptive proofs of the imperfect state of agriculture. Of these I shall mention only two, which feem to have been the most severe. There was so great a famine A. D. 1258, that no fewer than fifteen thousand persons (as we are told by a writer who lived at St. Alban's at that time) died in London of hunger, besides many thousands who perished for want of food in other places. But that famine which began A.D. 1314, and continued to rage for three years both in England and Scotland, must have been still more destructive: for in the course of that dearth a quarter of wheat, it is faid, was fold for forty hillings, equivalent to thirty pounds of our money at present;

Biograph. Britan. ift edit. Sup. p. 207.

⁴ M. Paris, Hift. Angl. ann. 1258. p. 653.

though in the former famine, A. D. 1258, it had never exceeded fixteen shillings'. On this occasion the parliament of England interposed, and fixed the price of provisions of all kinds by law: but it was foon found that this law prevented 'the bringing provisions to market, and it was there-The king, in a proclamation fore repealed. which he published at this time, prohibiting the making of malt, and brewing of ale, fays,-" that " if this was not prevented immediately, not only 44 the poor, but people of the middle rank, would " inevitably perish for want of food 6." word, we learn, from the concurring testimony of feveral historians who lived in those times, or foon after, that prodigious multitudes of people died of hunger, or of diseases contracted by the use of unwholesome food; and that many were tempted to perpetrate acts of the most unnatural cruelty, to prolong their wretched lives?. It may however be observed, that the historians who give an account of those deplorable famines, ascribe them to unfavourable feafons, and not to bad hufbandry; and it is also true, that there may be such feasons as will baffle all the efforts of the most industrious and skilful husbandmen. It must likewife be acknowledged, that at fome times in this period grain of all kinds was very plentiful, and

Book IV.

M. Paris, p. 653.

fold at a very low rate. A quarter of wheat, A. D. 1288, was fold in some parts of England for twenty pence, in others for fixteen pence, and in others for a shilling?.

Though I have not been able to discover that Operaany new operations of great importance in agriculture were introduced in this period, it plainly appears, that all those which had been before in better use,—as inclosing, fallowing, manuring, &c. were now performed more universally, and with greater periods. dexerity, than in former times. Inclosing was carried on fo brifkly, that the lands of England were in general inclosed with ditches and hedges. with trees planted in the hedge-rows, before the end of this period. "The feeding lands (fays fir " John Fortescue) are likewise inclosed with hedge-66 rows and ditches, planted with trees, which " protect the flocks and herds from bleak winds 44 and fultry heats 10." Summer-fallowing of fields for wheat was practifed as much, if not more, in England, in the thirteenth century, than it is at present. It was then a kind of rule among farmers, to have one third of their arable lands in fallow 12. In the law-book called Fleta, which was composed in the reign of Edward I. very particular directions are given as to the most proper times and best manner of ploughing and dressing fallows 12. The farmer is there directed to plough no deeper

tions in agriculture perthan in former

⁹ T. Walfing. Ypodigma Neustriæ, p. 476.

Portescue, De Laudibus Legum Angliz, chap. 29.

¹⁷ Fleta, lib. 2. chap. 72. p. 159.

¹² Id. ibid. chap. 73. p. 163.

in fummer than is necessary for destroying the weeds; not to lay on his manure till a little before the last ploughing, which is to be with a deep and narrow furrow. Rules are also given,-for the changing and chusing feed; -for proportioning the quantity of different kinds of feed to be fown on an acre, according to the nature of the foil, and the degree of richness;-for collecting and compounding manures, and accommodating them to the grounds on which they are to be laid;—for the best seasons for sowing seeds of different kinds on all the variety of foils;—and in a word, for performing every operation in husbandry, at the best time, and in the best manner 13. In the fame work, the duties and business of the steward. bailiff, and overfeer, of a manor, and of all the other persons concerned in the cultivation of it, are explained at full length, and with fo much good fense, that if they were well performed, the manor could not be ill cultivated 14.

Gardening. Gardening, one of the most pleasant parts of agriculture, was not neglected in this period. Almost every great castle, and larger monastery, had, besides a kitchen-garden, a herbary or physic-garden, a pomarium or orchard; and some of them had also vineyards. The monks of Dunstable were at much expence, A. D. 1294, in repairing the walls about the garden, and also the walls about the herbary of their priory; and the herbary mentioned in Chaucer's Nonne's priest's tale, appears

¹³ Fleta, lib. 2. ch. 72, 73. 76. 44 Ibid. ch. 72.—88.

to have been well stored with medicinal herbs, shrubs, &c ". The orchards of the great barons and prelates, as well as of the richer convents. contained a variety of fruit-trees which are commonly believed to have been brought into Britain at a much later time. The historians of this period commonly conclude the annals of every year with an account of the feafons, and of the abundance or scarcity of corns, fruits, and herbage. Matthew Paris, in the conclusion of his history of A. D. 1257, observes that the seasons had been very unfavourable, which had produced a famine, of which many of the common people died,— "That apples were scarce, pears still scarcer; but that cherries, plums, figs, and all kinds of " fruits included in shells, were almost quite de-" ftroyed 16."

The historians of this period fometimes mention Vinevine-dreffers and vineyards. The prior of Dunstaple paid into the exchequer, a sum of money -for an amercement which had been incurred by Stephen and Peter his vine-dressers, A. D. 122017. Ralph abbot of St. Augustine's, Canterbury, caused vines to be planted in a field at Nordhome, A.D. 1320, which (as we are told by the historian of that monastery, who had often seen them) did him great honour, and proved very

profitable

¹⁵ Annal. de Dunstaple, ad an. 1294. Chaucer's Works, edit. Urry, p. 170. Walpole's Anecdotes of Painting, vol. 1, p. 17.

⁷ Annal. de Dunstap, ad an. 1220. p. 94.

profitable to the fociety is. It is hardly credible, that these historians could be guilty of so gross an abuse of words, as to call a common gardener vinitor, and a common orchard of apple-trees vinea. An act of parliament that was made A. D. 1423, for regulating the capacity or meafure of tuns, pipes, tertians, and hogsheads of wine, was framed to comprehend those for wines made at home, as well as for wines imported. "It is ordained and stablished, that no man, after "the end of twelve months from the feast of 66 Easter next coming, shall bring into the realm 66 of England, from what country foever it be, " nor make within the same realm, a tun of " wine, except it contain of the English measure "two hundred and fifty-two gallons, &c. upon so pain of forfeiture of the same wine 19." This feems to indicate, that the wines made in England were confiderable for their quantity, and that they were of the fame kind with foreign wines, though probably of an inferior quality.

Treatifes on agriculture written in Latin. It is a curious circumstance, that not only treatises composed at this time for the instruction of farmers, and their servants, down to the swineherd, were written in Latin; but even the accounts of the expences and profits of farms and dairies were kept in that language. The Latin of these accounts, it must be confessed, was not

perfectly classical; as will appear from the following short specimen:- "Et pro uno seedcod " empto iii d.-Et pro uno cartsadel uno colero " cum uno pari tractuum emptis xiv d.-Et pro " factura de drawgere iii d .- Et pro uno donge-" cart empto xiv d.-Et pro farratione et do-" latione unius cartbody vi d"."

As the facred, civil, and military architecture Architecof this period was nearly in the same style with ture nearthat which was introduced towards the end of the sin the preceding period, and which hath been already period. described, it will not be necessary to dwell long on that subject, in this place22.

Building churches and monasteries being still sacred arbelieved to be one of the most effectual means of chitecture. obtaining the pardon of fin and the favour of heaven, prodigious numbers of both were built in Britain, in the thirteenth and fourteenth centuries. In the reign of Henry III. alone, no fewer than one hundred and fifty-seven abbies, priories, and other religious houses, were founded in England 23. Many of the cathedral and conventual churches were very large, lofty, and magnificent fabrics: which were raifed at a very great expence of labour, time, and money. Of this a careful inspection of the cathedrals of York, Salisbury, Litchfield, Worcester, Gloucester, Ely, Winchester, and several others, which were built in

²¹ Kennet's Parochial Antiquities, p. 549, &c. ..

²² See vol. 6. p. 180-191.

³ Grose's Antiquities, vol. 1. preface, p. 32.

this period, will afford the most satisfactory proof; and at the same time will give the clearest ideas of the style of facted architecture which then prevailed. This style was what is commonly called the lighter Gothic, with some variations. thirteenth century, the fashionable pillars in churches were of Purbic marble, very slender and round, encompassed with marble shafts a little detached, having each a capital adorned with foliage, which joining, formed one elegant capital for the whole pillar. The windows were long and narrow. with pointed arches and painted glass, which was introduced about that time, or at least became more common. In this century also they began to delight in lofty steeples, with spires and pinnacles. In the fourteenth century, the pillars confifted of an affemblage of shafts not detached, but united. forming one folid and elegant column: the windows, especially those in the east and west ends, were greatly enlarged, divided into feveral lights, by stone-mullions, running into ramifications above and forming numerous compartments in various fanciful shapes. Those windows, filled with stained glass of the most lively colours, representing kings, faints, and martyrs, and their histories, made a most folemn and glorious appearance. There were feveral other variations, especially in the taste of the carvings and other ornaments, which are too minute for general history 24.

²⁴ See Preface to Grose's Antiquities, Bentham's History of Ely, Wren's Parentalia.

The opulence of the clergy, and zeal of the Society of laity, furnished ample funds for building so great a mains. number of magnificent churches, monasteries, and religious houses, that it was with great difficulty workmen could be procured to execute those pious The popes, for very obvious reasons, favoured the erection and endowment of churches and convents; and granted many indulgences, by their bulls, to the fociety of masons, in order to increase their numbers. These indulgences produced their full effect in those superstitious times; and that fociety became very numerous, and raifed a prodigious multitude of magnificent churches about this time in several countries: "For (as we " are told by one who was well acquainted with " their history and constitution) the Italians, with " some Greek refugees, and with them French, "Germans, and Flemings, joined into a frater-" nity of architects, procuring papal bulls for their " encouragement, and particular privileges; they fivled themselves Free-masons, and ranged " from one nation to another, as they found " churches to be built (for very many in those " ages were every where in building, through 45 piety or emulation): their government was " regular; and where they fixed near the building, in hand, they made a camp of huts. veyor governed in chief; every tenth man was " called a warden, and overlooked each nine. The sendemen in the neighbourhood, either out of 66 charity or commutation of penance, gave the " materials and carriages. Those who have scen Voi. VIII.

"the accounts in records of the charge of the fabrics of fome of our cathedrals, near four hundred years old, cannot but have a great efteem for their economy, and admire how

" foon they erected fuch lofty structures"."

Confiruction of eaftles.

The great barons and prelates of Britain still continued to reside in castles, which served them at once for dwelling and defence. The general plan of these castles hath been already described; and that plan was for the most part followed in the present period 26. The chief towers, commonly called the keeps, of several of these castles, have lately been examined with great attention; from whence it appears, that they were contrived with wonderful art to answer the following purposes, which they had in view in their construction; 1. To render the entrance or gate at once magnificent and impregnable.—2. To fecure the garrifon, and to enable them to annoy the besiegers. 3. To delude the besiegers to attack the strongest parts, by giving them an appearance of weakness. -4. To put their prisoners, provisions, and implements of war, out of the reach of danger .-5. To convey the engines of war to any place of the castle with ease and expedition.—6. To communicate intelligence in a moment to any part of the building .- 7. To fupply the garrison with water.—8. To convey away the smoke and filth. -9. To provide a commodious and fafe habitation for the lord of the castle and his family. For the

^{25.} Wren's Parentalia, p. 306, 307. 26 See vol. 6. p. 189.

various contrivances to answer these purposes, the reader must be referred to the work quoted below 27; only, as a specimen, I shall mention the contrivance they employed to secure a constant supply of water to every apartment. The tower was divided within into two equal parts, by a thick partition wall of majoury, from the bottom to the top. The well for supplying the garrison with water was under the foundation of this partitionwall; and the pipe of it was carried up in the middle of the wall to the leads of the castle, where the pully for drawing the water was fixed. The people on each floor had access to the pipe of the well, for furnishing themselves with water, by a small arched opening in the partition-wall. From the ground-floor to the water, little square cavities were cut in the sides of the pipe, at proper distances, by which a perfon might descend to cleanse the It feems to be impossible to invent a more effectual method than this to prevent the garrison from being deprived of the necessary article of water; and it may be truly faid, that the contrivances to answer their other purposes were no less artful and ingenious 23. It must, however, be confessed, that the great barons and prelates of this period facrificed their conveniency to their fecurity; which feems to have been their chief concern in the construction of their castles; the apartments:of which were commonly gloomy, the

27 Mr. King's Observations on ancient Castles.

28 Id. ibid.

bed-chambers few and small, the passages marrow and intricate, and the stairs steep and dark.

Metallic arts.

The arts of refining and working metals are fo useful in themselves, and so necessary to the practice of other arts, that they merit some attention in every period. The keen pursuit of the philosopher's stone, in which many ingenious men were at this time engaged, contributed not a little to make them better acquainted with the ,nature and composition of metals, and with the arts of compounding, melting, and refining them. With the arts of tempering and polishing steel, and thereof fabricating defensive armourand offensive arms, they were well acquainted. Of copper they not only made many useful utenfils, but even statues. fum of four hundred poundswas paid, A.D. 1395,to Nicolas Broker and Godfrey Prest, citizens of London, and coppersmiths, for two statues, one of the king, and another of the queen, made of copper, and gilt, with crowns on their heads. their right hands joined, and holding sceptres, in their left hands . Statues of brass were still more common in churches, and on monuments 30. goldsmiths and jewellers were very numerous, and fome of them excelled in their profession. goldsmiths of London represented to Edward III. A. D. 1341, that many of their workmen had lost their fight by the heat of fire and the fumes of quick, filver; and that several others had become paraly-

²⁹ Madox Firma Burgi, p. 33, note (a).

walpole's Anecdotes of Painting, vol. 1. p. 20.

tic, infirm, and weak, by performing other parts of their work; and upon this representation, and their petition, that prince granted them leave to found and endow an hospital for the reception of those who had lost their fight, or their health, in their fervice 31. This feems to indicate, that workmen of that kind, at that time, in London, were very numerous. That some of them excelled in their profession, appears from the testimony of contemporary writers, and records, and from their descriptions of many beautiful pieces of gold and filver plate. Alan de Walfingham, a monk of Ely, in the thirteenth century, and feveral others, are celebrated for their superior skill in the goldfmith's art; and it is impossible to peruse the description of the gold and filver plate and jewels taken from Piers Gavaston, the unfortunate favourite of Edward II. by the earls of Lancaster and Warwick, without admiring both the quantity and workmanship 22. Sume pieces of the silver plate in that collection are said to have been worth four times the quantity of filver which they contained 33. At the triumphant entry of Richard II. and his good queen Anne, into London, A. D. 1392, the citizens, besides many other gifts, presented a crown of gold to the king, and another to the queen, both of great value, at the Fountain in Cheapside; and when the procession had advanced

³ Rym. Feed. tom. 5. p. 246.

³² T. Walfing. Hift. Ang. p4104. Rym. tom. 3. p. 388. Walpole's Anecdotes of Painting, vol. 1. ch. 1, &c. 3 Id. ibid.

a little further, they presented a table of gold, with a representation of the Trinity upon it, worth eight hundred pounds, equivalent to eight or ten thousand pounds of our money, to the king; and another table of gold, with the figure of St. Anne' upon ir, of equal value, to the queen 34. There is the fullest evidence, that England was very rich in gold and filver plate in this period: for befides the immense masses of those precious metals in the cathedral, conventual, and other churches, made into images, altar-tables, veffels and utenfils of various kinds, some of the nobles had greater quantities of plate than we could imagine. When the palace of the Savoy, belonging to John of Gaunt duke of Lancaster, was burnt, with all its rich furniture, in the great infurrection A. D. 138 1, the keeper of the duke's wardrobe declared, upon oath, That the filver, filver-gilt, and gold plate, in that palace, would have loaded five carts 35. The arts of gilding works made of other metals with gold, and of emboffing and enchasing gold and filver plate, were well known in this period. Gilt plate and gilt statues are frequently mentioned by our ancient historians; and we may be certain, that the figures representing the Trinity and St. Anne upon the two tables of gold, prefented by the citizens of London to Richard II. and his queen, were embossed or enchased 36.

³⁴ Knyghton, apud X Script. col. 2740. 35 kd. ibid. col. 2635. 36 Madox Firma Burgi, p. 23. note (0). Anglia Sacra, tom. 1.

p. 414. Knyghton/col. 2740.

the still more delicate art of enamelling plate and jewels unknown in the times we are now confidering. It appears, from the descriptive catalogue published by Mr. Rymer, that besides jewels there were several pieces of enamelled plate in the collection of Piers Gavaston 37.

The arts of cutting and fetting precious stones Lapidaries in crowns, rings, and other ornaments, though they are rather ornamental than necessary, may not improperly be introduced in this place, as they are so nearly connected with the metallic arts. They were far from being unknown in Britain in this period: for it is not credible, that all the jewels (which appear to have been very numerous and valuable) in the possession of our kings. nobles, and prelates, at this time, were of foreign workmanship. Though Henry III. was one of the most indigent princes that ever filled the throne of England, he had many curious and valuable jewels, which he was fometimes obliged to pawn. Among the jewels which he gave in pawn to the king of France, A. D. 1261, for five thousand marks, and relieved A. D. 1272, there were no fewer than 324 gold rings, fet with precious stones of various kinds 38.

It is not known to whom we are indebted for the Art of invention of the ingenious and useful art of making clocks. clocks of metal for measuring time and striking The first clock we hear of in Britain the hours. was placed in the old clock tower opposite to the

⁷⁷ Rym. Fæd. tom. 3. p. 388, &c. 38 Id. tom. 1. p. 730, 778. gate

gate of Westminster-hall, and is said to have been purchased with part of a fine of 800 marks imposed upon Randolff de Hengham, chief justice of the king's bench, A. D. 148839. Soon after this (A. D. 1292) another clock, which cost 301. equivalent to 400l. of our money at present, was fet up in the cathedral of Canterbury . These most ancient clocks were probably imported, of made by a foreign artist. For about seventy years after this, Edward III. invited three foreign clockmakers, viz. John Uninam, William Uninam, and John Lutuyt of Delft, to come into England, and granted them his royal protection to exercise their trade of clock-making in any part of his kingdom, without molestation 41. The design of this protection certainly was, to increase the number of these artists in his dominions, that their works might be more easily obtained. By these means, clocks were not uncommon in England, especially in cathedral and conventual churches, before the end of the fourteenth century. Chaucer compares the crowing of a cock to a churchorgan for sweetness, and to a church-clock for exactness as to time:

> His voice was merier than the merie orgon, On masse dayis that in the churches gon, Wel sikerer was his crowing in his loge, Than is a clock, or abbaye horologe 42.

44 Rym. Ford. tom. 6. p. 590. 42 Chaucer's Works, p. 169.

Clocks

³⁹ Schlen, Pref. to Hengham. Coke's 3d Inft. p. 72., 4th Inft. p. 255. 40 Dart's Canterbury, Append. p. 3.

Clocks were not only numerous, but the art of making them was brought to a confiderable degree of perfection in England, before the end of this This appears from the following description of an astronomical clock made by Richard de Wallingford, abbot of St. Alban's in the reign of Richard II. Leland, who feems to have feen and examined this famous clock, having told us that Richard de Wallingford was the greatest mathematician, astronomer, and mechanic of his age, proceeds in this manner: "After he was chosen " abbot, his ardent love of learning, and intenfe application to study, did not in the least abate. "On the contrary, being now possessed of wealth " and leifure, he resolved to leave a lasting monu-" ment of his ingenuity, art, and learning. " this view, he fabricated, at a great expence of "money, thought, and labour, a most wonderful clock, which represents the revolutions of " the fun and moon,—the fixed stars,—the ebbing " and flowing of the fea,-besides an almost in-" finite number of other lines and figures. " he had finished this astonishing piece of me-" chanism, to which in my opinion, there is " nothing in Europe comparable, he composed a " book of directions for managing and keeping it " in order, that it might not be ruined by the " ignorance of the monks 43."

Watches were also made, or at least used, in Britain, not long after the beginning of the four-

Watch+ making,

⁴³ Leland de Scriptoribus Britannicis, tom. 2. p. 404.

teenth century. A watch of that date was lately found by some labourers at Bruce-castle in Fifeshire, and is now in the possession of his present majesty, the illustrious descendent of its original proprietor, the heroic Robert Bruce, king of Scotland from A. D. 1306 to A. D. 1329. This very curious piece of antiquity is thus defcribed by a learned and honourable gentleman, who examined it with attention: "The outer case is of filver, raifed, in rather a handsome pattern, " over a ground of blue enamel; and I think I can distinguish a cypher of R. B. at each corner " of the enchased work. On the dial-place is " written Robertus B. Rex Scottorum, and over it " is a convex transparent horn, instead of the " glasses which we use at present.—This very " fingular watch is not of a larger fize than those which are now in common use 44."

Cloth manufacture. The people of Flanders and the Netherlands had long been the chief manufacturers of woollen cloth in Europe, and had thereby acquired immense wealth, which naturally excited the envy and emulation of other nations 45. The English in particular having great quantities of the most excellent wool, by degrees became sensible of the great advantages with which the manufacturing of it at home would be attended; and from time to time encouraged that manufactory 45. But that great

⁴⁴ Archæologia, vol. 5. p. 419, 420.

⁴⁵ Gervas, apud X Script. col. 1349.

⁴⁶ Sec vol. 6. chap. 5. p. 195.

and wife prince Edward III. made the most vigorous and successful efforts to that purpose. In the fifth year of his reign, A. D. 1231, John Kempe. a famous woollen-manufacturer of Fianders, came into England with his workmen and apprentices, and was most graciously received by Edward; who took him under his immediate protection, and published a proclamation, promising the like prorection and favour to all foreign weavers and fullers who would come and fettle in England 47. fequence of that invitation, no fewer than feventy families of Walloons came and fettled in England the same year; and these were followed by many others in the fucceeding years of that reign 42.

The parliament of England feconded the prudent and patriotic views of that prince, by making feveral flatutes for the encouragement of the woollen manufactory, A. D. 1337. By one of ing woolthese statutes, the exportation of wool, either by foreigners or denizens, is made felony, until the king and his council shall order it otherwise; by another it is enacted, that no foreign cloths shall be imported into the king's dominions, under the penalty of the forfeiture of the cloths, and the importer to be punished at the king's will; by a third, none were to wear any foreign cloths except the royal family; and by a fourth cloth-workers of all countries were invited to come into the king's dominions, by promifes of protection and encourage-

Laws for the encous ragement of the manufactur. len cloth.

⁴⁷ Rym. Feed. tom. 4. p. 496.

⁴⁸ Id. ibid. p. 723. 75 ..

ment . Though these laws were premature, and could not be executed in their full extent at that time, they had a great effect, and contributed very much to the establishment of the woollen manufacture in England.

Foreign manufacturers infulted.

The people in general, and the weavers in particular, did not immediately perceive the falutary tendency of these measures of their king and par-On the contrary, they were much offended to see such crowds of foreign weavers fettling in all the principal towns of England, and thriving by their skill and industry. In London those hated foreigners were so cruelly insulted, that their lives were continually in danger. To put a stop to those outrages, which threatened the difappointment of his defigns, Edward issued a mandate to the mayor and sheriffs of London, A. D. 1344, to apprehend every person who gave any disturbance to the foreign cloth weavers, to commit them to the prison of Newgate, and send him an account of their names, that they might be punished 50.

Different kinds of cloth manuta@ured. By these and the like means, that excellent prince established the manufactory of woollent cloths of many different kinds in England, in so essectional a manner, that before the end of his reign it was in a very slourishing state. This appears from a curious paper published by Mr. Rymer, in the seventh volume of his Fædera, containing a

⁴⁹ Statutes at Large by Mr. Ruffhead, vol. 1. p. 221.

⁵⁰ Rym. Fæd. tom. 5. p. 429.

grant from Richard II. A. D. 1382, to Cosmo Gentilis, the collector of the pope's revenues in England, to export a great many pieces of different kinds of cloths of various colours, without paying any duty 31. The first article in that grant consists of six pieces of tapestry of a green ground, powdered with roses, which the king sent as a present to the pope. If this was the manufactory of England, which is very probable, it affords sufficient evidence, that the weaving art, and the other arts connected with it, had then attained a considerable degree of persection.

Though the cruel and destructive art of war was never more necessary, nor more practised in Britain than in the present period, sew improvements of importance were made in that art, in the course of the thirteenth century. The armies were constituted, commanded, and armed in the same manner as in the former period, which hath been already

described 52.

The engines employed in battering the walls of towns and castles, acted with great force, and some of them were of an enormous size. Those used by Edward I, at the siege of Stirling castle, A. D. 1303, threw stones of three hundred pounds weight 33. One of these stones was thrown with so much force (if we may believe Matthew of Westminster) that it passed through both the outward walls of the castle 34. When Edward III. invaded

Art of war.

Military engines

53 W. Hemmingford, p. 205.
54 Mat. Westminst. lib. 2. p. 448.

Britanny, A. D. 1342, he carried his engines with him from the tower of London to Sandwich, with an intention to transport them to the continent; but not being able to procure a sufficient quantity of shipping to transport both his troops and engines, he lest these last behind him, and gave a commission to John de Wynewyk and William de Hurle, to press as many ships in all the ports of the kingdom as would be necessary to carry back the engines to the tower 55. This is a sufficient proof that those instruments of destruction were of a great fize, as well as very numerous. This ancient artillery continued to be used in sieges a considerable time, some of them two centuries, after the invention of gunpowder and cannon 56.

Greekbic. Greek-fire continued also to be employed in war, long after the introduction of fire-arms, particularly in the attack and defence of strong places. When an English army, commanded by the martial bishop of Norwich, besieged Ypres, A. D. 1383, the garrison, it is said, defended themselves so well with stones, arrows, lances, Greek-fire, and certain engines called guns, that they obliged the English to raise the siege with such precipitation that they lest behind them their great guns, which were of inestimable value 57. A part of that army was soon after besieged in the town of Burbourgh, by the French, who threw such quantities of Greek-

⁵⁵ Rym. Fæd. tom. 5. p. 350.

⁵⁶ P. Daniel, Histoire de la Milicie Françoise, tom. 1. p. 379.

⁵⁷ T. Walfing. p. 303.

THE ARTS.

five into it, that they burnt a third part of the town, which obliged the English to capitulate 58.

The eross-bow was confidered as so destructive an instrument, that the use of it amongst Christians against one another was prohibited by a canon of the fecond council of Lateran, A. D. 1139, and by a bull of pope Innocent III. in the beginning of the thirteenth century, which for a time had their effect . But by degrees these prohibitions were difregarded, the cross-bow was refumed, and continued in use during the whole of this period. It was a very destructive instrument, throwing arrows or quarrels to a great diffance. These quarrels were larger than other arrows, some of them were made of brass, and pointed with fteel 60.

It may feem farprising, that the invention of Reasons gunpowder made so little alteration in the art of armsmade war for so long a time. This was owing to several so little causes. The art of making gunpowder was long very imperfect, and known to few; and the art of making inftruments proper for applying it to the purposes of war was still more imperfect. consequence of this, both gunpowder and firearms were long very scarce and very dear. cannot suppose that the cannons which the English left behind them when they raised the siege of Ypres A. D. 1383, were either very large or very numerous; and yet we are told by a contem-

change in the art of

f T. Walfing. p. 304. 🕪 Rym. Fæd. tom. 3. p. 16.

⁵⁹ P. Daniel, tom. 1. p. 308.

porary historian, that their value was inestimable. The same historian relates, that an English sleet, A.D. 1386, took two French ships with very valuable cargoes; and a quantity of gunpowder was found in one of them, which was of greater value than all the other commodities ". Besides this, the warriors of those times were in possession of very powerful instruments of destruction, with the management of which they were well acquainted, and therefore we may presume that they were not very forward in adopting new ones of so different a nature.

But though the invention of gunpowder and fire arms did not produce immediately any very remarkable change in military matters; yet by flow degrees, and in length of time, it brought about an almost total alteration in the art of war: and therefore it may be proper to pay some attention to the progress of this great revolution.

Invention of gunpowder. That the ingredients of gunpowder, and the art of making it, were known to our ingenious countryman Roger Bacon, is undeniable 62. But that humane philosopher, dreading the consequences of communicating this discovery to the world, transposed the letters of the Latin words which signify charcoal, which made the whole obscure 3. By this means he rendered it dissicult to discover this

⁶¹ T. Walfing. p. 323.

⁶² Baconi Epistola de Secretis Operibus Artis et Naturæ, chap. 17.
63 Sed tamen salis petræ, luru mope can whre (carbonum pulvere,)
et sulphuris; et sic sacies tonitrum et corruscationem, si scias artisicium.

dangerous fecret by the perusal of his works, and at the same time secured to himself the honour of having known it, if it should be discovered by any other person. This accordingly happened not long after Bacon's death: for about the beginning of the fourteenth century one Barthold Schwartz, a German monk and chymist, accidentally discovered gunpowder as he was pounding faltpetre, fulphur, and charcoal in a mortar, for some other purpose '4.

It is difficult to discover the exact time when Introducgunpowder and fire-arms were first employed in fire arms. war by the British nations. If we may give credit to John Barbour, archdeacon of Aberdeen, in his metrical life of king Robert Bruce, Edward III. .had cannon (which that author calls crakys of war) in his first campaign against the Scots A. D. On that occasion, he acquaints us, the Scots observed two great novelties in the English army, which he thus describes:

Two novelties that day they faw, That forouth in Scotland had been nane. Timbers for helmes was the ane, That they thought then of great beautie, And also wonder for to see. The other crakys were of war, That they before heard never air 65.

It is probable, that the archdeacon received this anecdote from some of his countrymen who had

Vol. VIII.

been

⁶⁴ Du Cange Gloff. voce Bombarda.

⁶⁵ Barbour's Life of Bruce, p. 408, 409.

been in the Scotch army, and heard these crakys of war; as he wrote his book only about forty years It feems to have been feveral after that time. years after this, when the Scots first made use of cannon; which it is probable they received from France: for a fleet confisting of five large ships, loaded with men and arms, arrived in Scotland from France A. D. 1339, which encouraged the Scots to attempt the recovery of those strong places which the English still possessed in Scotland. With the affistance of these auxiliaries they took Perth, and then besieged the castle of Stirling; and being informed that an army was ready to march from England to its relief, they battered the place with cannon and other engines, and compelled the garrifon to capitulate 66. That firearms were used in France at that time, and before it, appears from the following article in the accounts of the treasurer of war, A. D. 1338:-"To Henry de Faumichan, for gunpowder and other things necessary for the cannon at the siege " of Puii Guillaume 67." Edward III. had cannon in his army at the famous battle of Creffy, and still more famous siege of Calais, A. D. 1346 68. By degrees the use of cannon became more and more common, so that in a few years the consternation that was at first produced by their explosion was very much abated. This we learn from the illustrious Petrarch, in his dialogues on the reme-

⁶⁶ Froiffart, l. 1. c. 74.
68 J. Villani, l. 12. c. 66 Froiffart, l. 1. c. 144.

dies of good and bad fortune, which were written A. D. 1358. In one of these dialogues between G. and R. is the following remarkable passage:

G. I have cross-bows, and other machines of war. R. I am surprised that you have not also so some of those instruments which discharge balls of metal with the most tremendous noise, and stashes of sire. These destructive plagues were a few years ago very rare, and were viewed with the greatest astonishment and admiration; but now (1358) they are become as common and samiliar as any other kind of arms. So quick and ingenious are the minds of men in learning the most pernicious arts of the same states.

Cannon.

Cannon, or as they were called, bombards, were the most ancient fire-arms ⁷⁰. The first cannon were very clumsy and ill contrived, wider at the mouth than at the chamber, and so like a mortar that it is probable the idea of them was suggested by that in which Schwartz pounded his materials when he discovered gunpowder ⁷¹. This capital error in the art of making cannon was soon corrected; but others still remained. They were all made of iron, without any mixture of other metals; some of them were too long, and others of them too short ⁷². In a word, the art of making cannon was still very impersect long after the conclusion of this period.

Both

⁶⁹ Petarch, De Remediis utriusque Fortunæ, Basil edit. p. 84.

⁷º Du Cange Gloff. voce Bombarda.
71 P. Daniel, tom. 1. p. 322. 72 Id. lib. 6. chap. 5.

Made in England.

Both gunpowder and cannon were made in England in the fourteenth century. This appears from a commission given to Thomas Norwich by Richard II. A. D. 1378, to buy two great and two small cannon in London, or any other place, and also to buy certain quantities of saltpetre, sulphur, and charcoal, for making gunpowder? From the same commission, as well as from other evidences, it appears, that cannon-balls, were at first frequently made of stone; for the same perfon is therein commanded to purchase six hundred balls of stone, for cannon and for other engines?

Hand can-

Besides great guns, which are still named cannon, a smaller kind of sire-arms, called bandcannon, came into use in this period. They were so small and light, that one of them was carried by two men, and fired from a rest fixed in the ground 15. The sour hundred cannon, or the greatest part of them, with which an English army besieged St. Malo A. D. 1378, must have been of this kind 16.

Prisoners

It was a happy circumstance, that in those turbulent times avarice gave some check to cruelty, and many persons who might have been killed in battle were saved, and taken prisoners, for the sake of their ransoms. These ransoms were commonly as great as the captives were capable of

⁷³ Rym. Foed. tom. 7. p. 187.

⁷⁴ Id. ibid. P. Daniel, tom. 1. lib. 6. p. 324.

⁷⁵ Id. ibid. p. 321. 76 Froisfart, tom. 2. p. 34. paying;

paying; and many prisoners were obliged to facrifice their fortunes to regain their freedom. To fay nothing of the ranfoms of the kings of France and Scotland, Bertrand du Guesceline, constable of France, who was taken by the English A. D. 1368, paid no less than one hundred thousand franks of gold before he could obtain his liberty 77. By this means war became a very gainful trade to those who were so fortunate as to take many or wealthy prisoners. The famous fir Walter Manny, who acquired fo much fame and wealth by war in the reign of Edward III. gained no less than 8000 l. (containing as much filver as 24,000 l. and equal in value to 100,000 l. of our money at present) by the prisoners he had taken in one campaign, A. D. 1340 78. Prisoners of war were so much the property of their captors, that they fometimes fold them, and fometimes left them in legacies to their friends; and when they did not dispose of them, they descended to their heirs 79. But to prevent dangerous prisoners from being too eafily fet at liberty, the king had a power to demand them from their captors, on paying a competent fum for their ransom, or to command their captors not to ransom them without a royal licence 80.

SECTION II.

History of the fine and pleasing arts of Sculpture, Painting, Poetry, and Music in Britain, from A. D. 1216, to A. D. 1399.

Fine arts cultivated.

SEVERAL things contributed to promote the cultivation of the fine arts in the present period. In particular,—the manner of building and furnishing churches,—the forms of public worship,—the opulence of the clergy,—and the splendour and muniscence of the greater barons. These things furnished constant employment, and ample rewards, to the professor of the pleasing arts, and rendered a genius for sculpture, painting, poetry, and music, equally honourable and prositable to the possessor.

Sculpture.

Many cathedral, conventual, and other churches, were built in Britain in this period, which were in general magnificent structures, ornamented on the outsides with statues of all dimensions, and with various figures of angels, saints, popes, prelates, and monks, in basso and alto relievo. The statues and sculptures that were executed in France, have been better preserved than those of Britain; and plates with descriptions of many of them, have been published by father Montsaucon; who declares,—That the sculptors of the thirteenth century greatly excelled their predecessors in several

veral respects. Besides those which have been defaced by time and the injuries of the weather, many of the statues and sculptures which ornamented the churches of this island were demokshed by violence at the reformation, or in the civil wars of the last century; but those sew which still remain consists the truth of father Montsaucon's declaration².

fally paid to crucifixes, and to the images of the Virgin Mary, the apostles, and other saints, furnished another branch of business to the statuaries of this period; and they were excited, by the most

That superstitious veneration which was univer- Statues.

ample rewards, to exert all their skill to give those objects of the people's devotion a graceful and venerable appearance. Several of the clergy, and particularly of the monks, applied to the pious work (as it was then esteemed) of making images for their churches, and were prompted by their religious zeal, and by the prospect of obtaining both wealth and honour, to render them as attracting as possible. Walter de Colecester, sacrift of the abbey of St. Alban's, is celebrated by Matthew Paris, his contemporary, and a monk of the same abbey, as an admirable statuary; and several of his works are described as exquisitely beautiful.

The

Book IV.

Shrines and tombs.

The shrines of faints, with the tombs of princes, prelates, barons, knights, and their ladies, afforded further employment to the statuaries and sculptors of this period; as they were generally adorned with statues, and some of them with a great number of figures. Some of these works were probably executed by foreign artists; as, particularly, the shrine of Edward the Confessor, in Westminster abbey, by Peter Cavalini, a Roman sculptor 5. But, upon the whole, we have sufficient evidence, that this art was cultivated with care and success in Britain in this period. Forbesides all the statues that were used at home, we find that fome, probably confiderable numbers, were exported. Richard II. granted a licence to Cosmo Gentiles, the pope's collector in England, A. D. 1382, to export three great images, one of the Virgin Mary, one of St. Peter, and one of St. Paul, and a fmall image of the Holy Trinity, without paying any duty or custom for them; which feems to indicate, that certain customs were then payable on the exportation of fuch commodities 6.

Painting.

When sculpture was cultivated, the kindred art of painting could not be neglected. On the contrary, there are the clearest proofs remaining, that painting was cultivated with still greater diligence

⁴ See Brown Willes Cathedrals, Weaver's Monuments, &c.

⁵ Mr. Walpole's Anecdotes of Painting, vol. 1. p. 18.

⁶ Rym. Foed. t. 7. p. 357.

and fuccess than the other?. In particular, painting appears to have flourished very much in the former part of this period, under the patronage of Henry III. who was a most muniscent encourager of the fine arts. This prince kept feveral painters constantly in his service, as William, a monk of Westminster; William, the Florentine; and Mr. Walter, who was probably Walter de Colecester, so much celebrated by Matthew Paris for his admirable genius for paint-. ing as well as sculpture?. By these and others, many historical paintings were executed for him, in his several palaces of Winchester, Woodstock, Westminster, the Tower of London, Nottingham, Northampton, Windsor, Guildsord, and Kenelworth. One chamber in the palace of Winchester was painted green, with stars of gold, and the whole history of the Old and New Testament 10. In one room in the palace of Westminster, and in another in the Tower of London, the history of the expedition of Richard I. into the Holy Land was painted". These pictures (to fay nothing of many others) must have contained a prodigious number of figures; but with what degree of taste they were executed, we have no opportunity of judging. Though some succeeding princes were not fo fond of paintings as Henry III. had been, the art still continued to

flourish;

⁷ See the learned and ingenious Mr. Walpole's Anecdotes of Painting, from p. 1. to p. 32.

8 Id. p. 21.

⁹ Id. p. 15, 16. M. Paris, Vitæ Abbat.

Apecdotes, &c. vol. 1. p. 7. 11 Id.ibid. p. 11.

flourish; and we have reason to believe, that good painters wanted neither patrons nor employment. The coronation, wars, marriages, and funeral of Edward I. were painted on the walls of the great hall in the episcopal palace of Litchfield, A. D. 1312, by order of bishop Langton 12. Simeon faw a still more curious picture in the palace of Westminster, A. D. 1322; which he thus describes:-" Near this monastery (of "Westminster) stands the most famous royal pa-" lace of England, in which is that celebrated " chamber, on whose walls all the warlike his-" tories of the whole Bible are painted with in-" expressible skill, and explained by a regular and " complete series of texts, beautifully written in " French, over each battle, to the no small ad-" miration of the beholder, and display of royal " magnificence 13." So intent was Edward III. upon finishing the paintings in the chapel of his palace of Westminster, that he granted a precept, dated 18th March A. D. 1350, to Hugh de St. Alban, master of his painters, commanding him to impress all the painters in the counties of Kent, Middlesex, Essex, Surry, and Sussex, to conduct them to Westminster, and keep them in his fervices as long as it should be necessary. hending that all these would not be sufficient, he granted fimilar precepts, of the same date, to John Athelard and Benedict Nightingale, to impress all the painters in the counties of Lincoln,

²³ Warton's History of Poetry, vol. 2. p. 216. ²³ Id. ibid. North-

ķ.

Northampton, Oxford, Warwick, Leicester, Cambridge, Huntingdon, Norfolk, and Suffolk, for the same purpose 14. These paintings must have been numerous and extensive, whatever they were in other respects. The truth is, that the principal churches and chapels were not only furnished with portraits of the Virgin Mary, the apostles, and other faints, but the walls of some of them were almost covered with scriptural, moral, and allegorical paintings 15. So great and general was the taste for paintings in this period, that not only the walls of churches and palaces, but even of the bed-chambers of private gentlemen, were ornamented with historical pictures. When Chaucer was roused from his famous poetical dream, he expresses his surprise, that all the gay objects which he had feen in his fleep were yanished, and he saw nothing

> Save on the wals old portraiture Of horfmen, haukes, and houndis, And hart dire all full of woundis 16.

This, I am persuaded, is a real description of the 'poet's bed-chamber. In the same poem, Chaucer describes a church-window:

With lives of many divers seint.

6 Chaucer's Works, by Urry, p. 587. col. 1.

^{**} Rymeri Fæd. tom. 5. p. 670.

is Fox's Acts and Monuments, p. 370. col. 1. Warton's History of Poetry, p. 217. note (a).

And it is well known, that painting on glass was much practised, and brought to great perfection, in the present period '7. The same may be said of another species of painting, which was called illuminating. This appears from many manuscripts beautifully illuminated, which are still preserved in the British Museum, and other libraries, from which several prints have been published 12. Nay, so fashionable was the study of painting in this period, that it was esteemed as necessary a part of the education of a young gentleman as writing. It is said of the squire, or knight's son, in Chaucer,

—— Songis he could make, and well endite, Just, and eke daunce, and well portraic and write 19.

Poetry.

Though Britain abounded as much with poets in the thirteenth century as in any other period, and though they were as much admired by their contemporaries as those who flourished in better times, few or none of them are now famous: their names are generally forgotten, and their works neglected. This obscurity is perhaps as much owing to the antiquated nature of the languages in which they wrote, and the subjects of which they sung, as to the mediocrity of their poetical talents.

Metrical chronicles and romances. To fay nothing of fonnets, and other short pieces of poetry, the larger poems composed in

¹⁷ Chaucer's Works, by Urry, p. 584. col. 2.

¹⁸ See Mr. Strut, vol. 2, 3. 19 Chaucer's Works, p. 2.

. the thirteenth century were either metrical chronicles or metrical romances; and the languages in which they were written were either Latin, French, or English; which last is now become almost as unintelligible to a mere English reader as the two former.

Robert of Gloucester, who was a monk in the Robert of abbey of Gloucester, and flourished in the reigns ter. of Henry III. and Edward I. composed a rhyming chronicle of England, from Brutus to Edward I. which hath been printed 20. Our author. it must be confessed, was but an indifferent poet. and a worse historian, having adopted the abfurdest fables of Geoffrey of Monmouth, and clothed them in tiresome inanimated rhymes. His language was the vulgar English of the age in which he wrote, is full of Saxonisms, and hardly intelligible to a modern reader. The following fabulous account of the transportation of Stonehinge from Africa to Ireland by giants, and from thence to Salisbury plain by Merlin, will justify the above strictures, and be a sufficient specimen King Arthur having confulted of this work. Merlin about erecting a monument in honour of the Britons who had been treacherously slain by the Saxons near Amesbury, the magician replied.

, Sire kyng, quoth Merlin, tho' gif thou wolt here cafte In the hongur of men, a worke that ever schal ylaste,

²⁰ See Robert of Gloucester's Chronicle, 2 vol:. Oxon. 1724.

To the hul of Kilar fend into Yrlonde,
Aftur the noble stones that ther habbet lenge ystonde,
That was the tricke of giandes, for a quoynte work there is
Of stones all wyth art ymad in the world such non ys.
Ne ther nys nothing that me scholde myd strenghe adounce cast.

Stode heo'here, as heo doth there ever a wolde last.

The kyng Somedele to lyght, though he herde this tale,
How mygte, he scyde, such stones, so grete and so fale,
Be ybrogt of so fer lond? And get mist of were,
Me wolde wene, that in this londe no ston to wonke nere.

Syre king, quoth Merlyn, ne make noght an ydel such
lyghyng.

For yt nys an ydel noght that ich tell this tythyng.

For in the farreste stude of Affric giands while sette
Thike stones for medycyne and yn Yrlonde him sette,
While heo wonenden in Yrlonde to make here bathes there;
Ther undir for to bathi wen thic syk were.
For heo wuld the stones wasch, and ther enne bath ywis.
For ys no stone ther among that of grete vertu nys.
The kyng and ys conseil radde the stones for to sette,
And wyth gret power of batail, gif any mon him letter.
Uter the kynge's brother, that Ambrose hett also,
In another name, ychose was thereto,
And sisteene thousant men this dede for to do;
And Merlyn for his quintife thider went also.

Ye yonge men, quoth Merlyn, cutheth now your mygte, How ye mow this stones best to the schip dygte. Hea stode and bithogte him best, and cables sette ynowe, And laddres and leveres, and sast schow and drowe. Ac heo ne migte come for nothing to end myd here wille. Merlyn say this, and low, and bad him stonde stille. He sette hys gynnes, as he wold, and ys quoyntise dude stille. And the folk myd tho stones ho dude all here wille; And lette him to schippes brynge, and so into this londe, Ac ther was som inchantery ther to ich understonde.

²¹ Robert of Gloucester, v. 1. p. 145-148.

Peter Langtoft, a canon in the monastery of Langtoft Bridlington in Yorkshire, flourished at the same time with Robert of Gloucester, and wrote a chronicle of England from Cadwallader to Edward I. in French verse. This work was properly a continuation of an ancient metrical chronicle in the same language; the first part of which had been composed by one Eustace, A. D. 1155, and the fecond part by Robert Wace, canon of Bayeux, A. D. 116022. All the three parts of this chronicle were translated into English verse by Robert Manning, who is better known, by the name of Robert de Brunne, from the monastery of Brunne in Lincolnshire, in which he was a monk. He acquaints us with the motives which engaged him to make this translation in his prologue to the first and second parts, and of the contents of these two parts:

> Lordyngs that be now here, If ye wille listene and lere, All the story of Inglande, As Robert Manning wrytten it fand, And on Englysch has it schewed, Not for the lered, but for the lewed. And it is wisdom forto wytten, The state of the land, and hef it wrytten, What manere of folk first it wan, And of what kynde it first began. And gude it is for many things, For to here the dedis of kynges,

^{**} Warton's Hist. Poet, v. 1. p. 62, 63.

HISTORY OF BRITAIN.

Book IV.

Whilk were foles, and whilk were wyfe,
And whilk of them couth most quantyse,
And whilk did wrong, and whilk ryght,
And whilk mayntined pes and fyght.
Of thare dedis sall be mi sawe,
In what tyme, and of what law,
I sholl you from gre to gre,
Sen the tyme of fir Noe:
From Noe unto Æneas,
And what betwixt tham was,
And fro Æneas till Brutus tyme,
That kynde he tells in this ryme.
Fro Brutus to Cadweladres,
The las Briton that this lande teas 23.

In his prologue to the third part, he gives the following short account of its original author:

> Pers of Langtoft, a chanon Schaven in the house of Bridlyngton On Frankis style this storie he wrote Of Inglis kinges, &c.

Robert de Brunne's translation of Langtost's part of this chronicle hath been printed; and therefore it is not necessary to swell this section with any specimen from that part²⁴.

Catalogues of metrical romances. Metrical romances, celebrating the wonderful atchievements of valiant and gentle knights, were the most frequent and favourite productions of the poets of the thirteenth century. Incredible numbers of these romances were composed in

²³ Warton's Hift. Poet. vol. 1. p. 64, 65.

²⁴ See Peter Langto t's Chronicle, illustrated and improved by Robert of Brunne, 2 vols. Oxon. 1725.

France and England in that period; and hearing them repeated or fung to the music of the harp, in the halls of palaces and castles, formed one of the chief amusements of persons of the highest rank. The following catalogues of a sew of these romances will give the reader some idea of their numbers, their heroes, and their subjects:

Many Romayns men make new,
Of good knyhtes and of trewe:
Of their dedes men make romauns,
Both in England and in Fraunce.
Of Rowland and of Olyvere,
And of everie Dosepere,
Of Alysaundre and Charlemayne,
Of kyng Arthur and of Gawayne;
How they wer knyghtes good and courtoys,
Of Turpen and of Oger the Danois;
Of Troye men rede in ryme,
Of Hector and of Achilles,
What folk they slew in pres, &c. 25

Another:

Herkene now how my tale gothe!
Though I swere to you no othe,
I wyll you rede romaynes none,
Ne of Partenape, ne of Ypomedon,
Ne of Alesaunder, ne of Charlemayne,
Ne of Arthur, ne of Gawayne,
Ne of Lancelot du Lake,
Ne of Bevis, ne of Guy, of Sydrake,
Ne of Ury, ne of Octavian,
Ne of Hector, the strong man,

Warten's Hift. Poet. vol. 1. p. 122.

Ne of Jason, neither of Achilles, Ne of Eneas, neither Hercules, &c. 26

Another:

Men that romaunces rede,
Of Bevys, Gy, and Gawayne,
Of kyng Richard, and Owayne,
Of Triftram and Percyvayle,
Of Rowland ris, and Aglavaule,
Of Archeroun, and of Octavian,
Of Charles, and of Caffibedlan,
Of Keveloke, Horne, and of Wade,
In romaunces that of him bi made,
That geftours dos of him geftes,
At mangeres, and at great feftes, &c. 20

Another:

Men lykyn gestis for to here And romans ride in diverse manere Of Alexander the conquerour, Of Julius Cæfar the emperour, Of Greece and Troy the strong stryf, Ther many a man lost his lyf: Of Brut that baron bold of hand The first conqueror of England, Of king Arthur that was so ryche, Was none in his tyme fo clyche, Of wonders that among his knyghts felle, And Auntyrs didyn, as men her telle, As Gawayne and other full Abylle, Which that kept the round tabyll, How king Charles and Rowland faught With Sarazins, nold thei be caught: Of Trytram and Ysoude the swete How thei with love first gan mete.

Warton's Hift. Poet. vol. 1. p. 123.427 Id, ibid. p. 119. note (y).

Of kyng John and of Isinbras
Of Ydoyne and Amadas.
Stories of divers thynges
Of princes, prelates, and kynges,
Many songs of divers ryme
As English, French, and Latyne 25.

The authors of these metrical romances paid very little regard to the true history of their respective heroes, but boldly contradicted the best known and best established facts. Nothing, for example, was better known in the thirteenth century, when the romance of our king Richard I. was written, than that he was the son of Henry II. and his queen Eleanor of Provence. But this plain story did not please the author of that romance, who who opens his poem with the following siction. Henry II. having, by the advice of his barons, resolved to marry, sends messengers into many different countries, with directions that—

Contradicted true hifto-

The fayrest woman that was on lyve They should bring him to wyve.

These messengers accidentally met at sea with a most splendid ship,

Such ne faw they never none,
For it was fo gay begone,
Every nayle with gold ygrave
Of pure gold was his sklave,

X 2 Her

²⁸ Waiton's Hift. Poet, vol. 1. p. 123. See a catalogue of thefe ancient metrical romances in Dr. Percy's ingenious effay pr-fixed to the third volume of his Reliques of Ancient English Poetry.

Her mast was of ivory,
Of samyte her sayle wytly
Her ropes all of whyte sylk,
As whyte as ever was ony mylke.
The noble ship was without
With clothes of gold spread about,
And her lost and her wyndlace
All of gold depaynted was.

Being courteously invited, they went on board this ship, where they found Carbarryne king of Antioch, with his daughter, a princess of the most exquisite beauty, attended by a numerous retinue of knights and ladies. The king received them with great politeness, and entertained them with a sumptuous feast.

Whan thei had done their mete
Of adventures thei begyn to speke.
The kyng them told in his reason,
How it cam him in a vysyon,
In his lond that he came fro
Into Engelond for to go
And his daughter that was hym dire,
For to winde with him in fire,
And in this manner we be dyght
Unto your londe to winde ryght.

The messengers then acquainted the king and the princess with the commission they had received from their master the king of England, and assured them,—

Further we will feek nought, To my lorde she shall be brought.

Accord-

Accordingly the king and princess, with the ambassadors, arrive safe in England, the princes is married to Henry II. and the lion-hearted Richard. the hero of the romance, is faid to have been the fruit of that marriage 20.

The metrical romances of this period contain Robert descriptions of the marvellous adventures of their lands. knightly heroes, and abound with the Gothic machinery of dragons, giants, elves, fairies, enchan-But for a more perfect account of these curious performances than can be admitted into general history, the reader is referred to the very instructive and entertaining works quoted below 30.

The same taste for composing, reading, and Alliterahearing metrical romances of chivalry prevailed in the fourteenth century, especially in the reign of that gallant magnificent monarch Edward III. About the middle of that century an attempt was made to revive, or at least to imitate the alliterative poetry of the Anglo-Saxons without rhyme, by Robert Langlande, a secular priest of Oxford, in his famous allegorical fatire against persons of all professions, called The Vision of Pierce Plowman. This poem abounds with the boldest personifications, the keenest satire, the most expressive descriptions, and the most singular versification; of all which the four following lines, representing the man-

³⁹ Warton's Hist. Poet, p. 151, &c.

³⁰ History of English Poetry by Mr. Warton, vol. 1. § 50 Piercy's Reliques of Ancient English Poetry, vol. 3.

ner in which hunger treated a reduced spendthrist, must suffice as a specimen:

Hunger in hast tho' hint Wastour by the maw, And wrong him so by the wombe that both his eies watered. He busseted the Briton about the chekes That he looked lyke a lanterne al his life after 21.

About A. D. 1390 another poem in the same kind of versiscation was composed, called *Pierce the Plowman's Crede*. It is a severe satire on the sour orders of mendicant friars; and the following description of an overgrown Franciscan will give the reader some idea of the language and spirit of the poem:

I fond in a freture a frere on a benche,
A great chorl and a grym, growen as a tonne,
With a face fo fat, as a full bleddere
Blowen bretful of breth, and as a bagge honged
On bothen his chekes and his chyn, with a choll lollede
So great a gos ey, growen all of grece,
That all wagged his flesh as a quick mire 32.

John Earbour. John Barbour, archdeacon of Aberdeen, was one of the best poets of Scotland, or even of Britain, in the fourteenth century. This appears from his metrical history of the life and acts of Robert Bruce, king of Scotland, which is a work of confiderable merit, for the time in which it was composed. Though the archdeacon styled his poem a Romans, he did not mean that it consisted of fabulous adventures; for he intended it to be (as

³¹ Warton's Hift. Poet. vol. 1, p. 282. 32 Id. ibid. p. 305.

Ch. 5. § 2. THE ARTS.

for the most part it is) a true history of the great actions of his hero:

Stories to read are delectable,
Suppose that they be nought but fable:
Then should stories that soothfast were,
If they are said in good manner,
Have double pleasance in hearing.
The first pleasance is the carping,
And the other the foothfastness,
That shewsthe thing right as it was.
And soothfast things that are likand,
To mens hearing are most pleasand;
Therefore I would sain fet my will,
If my wit might suffice theretil,
To put in writ a soothfast story,
That it last ay forth in memory 33.

The verification of this poem is, in general, correct and smooth, and the sentiments just and noble. Of this it would be easy to produce many proofs, of which the following high encomium on freedom or liberty is one:

Ah Freedom is a noble thing!
Freedom makes man to have liking;
Freedom all folace to man gives;
He lives at ease that freely lives.;
A noble heart may have none ease,
Nor nought else that may it please,
If freedom fail 34.

It is remarkable, that though Barbour was a Scotfman, his language is rather more intelligible to a modern English reader than that of any other poet

33 Barbour, p. 1.

34 Id. p. 8.

of the fourteenth century, his great contemporary Chaucer himself not excepted.

Chaucer and Gower. At the same time flourished the two princes of ancient English poets, the great improvers of their art, and polishers of the language of their country, Jeosfrey Chaucer and John Gower, whose personal histories have been briefly related 35. The shortest analysis that could be given of the numerous works of these two venerable bards would swell this section far beyond its due proportion; it is therefore hoped that the reader will be satisfied with the following characters of their poetical talents, drawn by the hand of one of the most ingenious and intelligent critics of the present age, who appears to have studied their works with great attention.

Their characters as poets.

"Enough hath been faid to prove, that in elevation and elegance, in harmony and perspicuity
of versification, Chaucer surpasses his predecessor cessor in an infinite proportion: that his genius
was universal, and adapted to themes of unbounded variety; that his merit was not less in
painting familiar manners with humour and propriety, than in moving the passions, and in
representing the beautiful or the grand objects
of nature with grace and sublimity. In a word,
that he appeared with all the lustre and dignity
of a true poet, in an age which compelled him to
ftruggle with a barbarous language and a national want of taste, and when to write verses at

sall was confidered as a fingular qualificase tion is.

if Chaucer had not existed, the compositions et of John Gower, the next poet in succession, would alone have been sufficient to rescue the er reigns of Edward III. and Richard II. from the imputation of barbatism. His education was liberal and uncircumscribed, his course of reading extensive, and he tempered his severer studies with a knowledge of life. By a critical cultivation of his native language, he endeavoured to 4 reform its irregularities, and to establish an " English style"."

The history of dramatic poetry affords few authentic materials in the present period, and will be introduced with greater advantage in the tenth volume of this work.

Music and poetry were more intimately united History of in the middle ages than they are at present. Many musicians were then poets, and sung verses composed by themselves, and by others of their profession to the music of their instruments. fecular musicians of those times were called minstrels, and formed a very numerous fraternity, possessed many privileges, and held in high estimation by persons of all ranks. They wore a particular dress, and certain ornaments which procured them immediate access to the greatest personages on the most folemn occasions. Of this

³⁶ Mr. Warton's History of English Poetry, vol. 1. p. 457. 37 Id. vol. 2. p. 1.

the following remarkable and well-attested fact is a fufficient proof: "When Edward II. this year " (1316) solemnized the feast of Pentecost, and " fat at table in royal state in the great hall of "Westminster, attended by the peers of the " realm, a certain woman, dreffed in the habit of " a minstrel, riding on a great horse, trapped in " the minstrel fashion, entered the hall, and going " round the several tables, acting the part of a " minstrel, at length mounted the steps to the " royal table, on which she deposited a letter. " Having done this, she turned her horse, and, " faluting all the company, she departed." When the letter was read, it was found to contain some fevere animadversions on the king's conduct, at which he was much offended. The door-keepers being called, and threatened for admitting fuch a woman, readily replied, "That it never was the " custom of the king's palace to deny admission to " minstrels, especially on such high solemnities " and feast days 38."

Mufical inftruments.

Though the harp still continued to be the chief and favourite instrument of the minstrels of this period, there is fufficient evidence that they knew and fifed a variety of other instruments; of which it may not be improper to name a few. band of muficians in the household of Edward III. confisted of five trumpeters, one cyteler, five

³⁸ T. Walfing. Hift. Ang. an. 1316. p. 109. Trokelow, edit. a T. Hearne, p. 39. See Dr. Percy's excellent effay on the Ancient English Minstrels, prefixed to his Reliques of Ancient English Poetry, vol. 1. pipers,

pipers, one tabret, one mabrer, two clarions, one fidler, three wayghts or hauthois ³⁹. In a work translated into English in this period, the following musical instruments are mentioned and described; the organ, the harp, the sawtry, the lyre, the cymbal, the sistrum, the trumpet, the slute, the pipe and tabor, the nakyre, the drum, and several others ⁴⁰. Among the accomplishments of Chaucer's parish-clerk, we are told,

In twenty manir couth he trip and daunce, After the scole of Oxenford tho And with his legges casten to and fro, And playin songes on a small ribible, Thereto he song sometime a loud quenible: And as well couth he play on a giterne 4.

Chaucer's miller was also a musician; but on a more vulgar instrument:

A bagge pipe well couth he blow and fowne, And therewithal brought he us out of towne 42.

In one of Gower's poems are the following verses:

He taught hir, till she was certeyne, Of harpe, citole, and of riote, With many a tewne and many a note 43.

Matthew Paris mentions musical instruments called burdons, which were used in the church of St.

³⁹ Sir John Hawkins's Hiftory of Music, vol. 2. p. 107.

⁴⁰ Id. ibid. p 281, &c. 41 Chaucer, p. 26. 42 Id. p. 5.

⁴³ Confessio Amantis, fol. 178.

Alban's, and probably in other churches . But it is unnecessary to make this catalogue more complete.

Mufic much admired.

To what degree of perfection music was brought by the secular minstrels of this period, we have no opportunity of judging 45. But we have the fullest proof that it was exceedingly pleasing to those who heard it, and that it gave great delight to the greatest and best men of those times. Robert de Brunne hath preserved the following anecdote, to this purpose, of the learned and pious bishop Grosteste or Greathead of Lincoln:

He lovede moche to hear the harpe, For man's wille it makyth sharpe. Next hys chamber, befyde his study, Hys harper's chamber was fast the by, Many tymes, by nightes and dayes, He hadd solace of notes and layes 46.

It is not to be imagined that kings, princes, prelates, and barons, would have conspired to load those minstrels with honours and rewards, if they had not taken much pleasure in their tuneful strains.

Church music. Sacred music was now cultivated with as much ardour by the clergy as secular music by the minstrels. The church had been long gradually departing from the primitive simplicity of the christian worship; and after the introduction of

⁴⁴ M. Paris, Vita Abbatum, p. 91.

⁴⁵ See Sir John Hawkins, vol. 2. ch. 8.

⁴⁶ Warton Hift. Poet. vol. 1. p. 61.

organs into churches, fo many of the public offices were fung to the found of those noble instruments, that the study of music became absolutely necessary to all who were to bear any part in the celebration of these offices. Music was accordingly taught and studied in all colleges, cathedrals, convents, and capital churches; and we are affured by a late writer, who hath made the most laborious researches into the history of music, " that the " clergy in the thirteenth century, were by much " the most able proficients, as well in instrumental " as vocal music "." The truth is, that in great churches some of the public offices were considered as musical exhibitions, and frequented for amusement rather than devotion. To the various diverfions of hunting, hawking, feafting, dancing, which a king proposed to his daughter to divert her melancholy, he added:

> Then shall ye go to your even song, With tenoures and trebles among, Your quire nor organ songe shall want, With countri note and discaunt, The other halfe on orgayns playing, With yong chyldren ful sayn syngyng 48.

Chaucer's nun and friar were both proficients in music;—of the former it is said,

Full wele she song tho the service divine.

⁴⁸ Warton Hift. Poet. vol. 1. p. 179.

HISTORY OF BRITAIN. Book IV.

Of the latter, That.

----certainly he had a merry note, Wele couth he fing and playin on a rote.

Mufical characters or meafured fong, invented.

Though Guido Aretini's invention of the mufical scale already mentioned, was very valuable, it was imperfect, because it had no marks to denote the different lengths of founds 49. This imperfection was afterwards removed by the invention of feveral characters for representing the various lengths of musical sounds; and music delineated by these characters, was called cantus mensurabilis or measured song. But when or by whom this great improvement of delineating measured music was invented is not agreed; fome ascribing it to Franco, a scholastic of Liege, who slourished towards the end of the eleventh century; and others to John de Muris, an Englishman, who flourished in the former part of the fourteenth century 50. This invention, whoever was the author of it, was much admired, many treatifes were written to explain, improve, and recommend it, and it certainly contributed not a little to facilitate the communication and preservation of musical knowledge 51.

GREAT BRITAIN

OOK

CHAP. VI.

History of Commerce, Coin, and Shipping, in Great Britain, from the death of king John A. D. 1216, to the accession of Henry IV. A. D. 1399.

NOMMERCE hath contributed so much to A the prosperity, power, and wealth of Britain, that it is well intitled to a distinct and conspicuous place in its history, in every period; and as coin and shipping are the two chief instruments of commerce, they also merit a share of our attention.

The internal commerce of Britain, and parti- Internal larly of England, was unquestionably an object of merce. great importance in the present period; but it

doth

doth not seem to have been managed to the best advantage. It is a sufficient proof of this, that the prices of the most valuable and necessary commodities were sometimes more than double in some places to what they were in others. We are informed, for example, by a contemporary author, that A. D. 1258, a quarter of wheat cost twenty shillings at Northampton, when it was sold for eight shillings and six-pence at Dunstaple. This could not have happened, if intelligence had been regular, and commercial intercourse safe and easy.

Loaded with fevetal imposts. Internal trade was loaded at this time, with a great number of petty taxes and impositions, as lastage, paiage, passage, pontage, stallage, and several others whose names are now become unintelligible. These taxes, or some of them, were demanded by every town, and by every baron through whose boundaries traders conveyed their goods, and at every place where they exposed them to sale.

Transacted in fairs.

The greatest part of the domestic trade of Britain was still transacted in fairs. Some of these fairs were of long duration, frequented by prodigious multitudes of people from different countries, and stored with commodities of all kinds. The fair of St. Giles's hill, near Winchester, continued sixteen days, during which time all trade was prohibited in Winchester, Southampton, and every

Annal. Dunstap. an. 1258.

² Anderson's Hist. Commerce, vol. 1. p. 110.

place within feven miles of the fair, which very much resembled a great city, laid out into drany regular streets of tents, inhabited by foreign and domestic traders, who exposed their various commodities to fale . To fuch fairs our kings, prelates, and great barons, fent their agents, and others went in person, to purchase jewels, plate, cloths, furniture, liquots, spices, horses, cattle, corn, and provisions of various kinds, and in a word, every thing they needed, men and women not excepted. For we are assured, by a contemporary writer of undoubted credit, that men and women flaves were publicly fold in the fairs of England, like beafts, near the conclusion of the fourteenth century 4.

The foreign trade of England, in the present Foreign period, was more confiderable and extensive than is commonly imagined. This will appear from the following very brief review of the feveral countries with which the people of England had commercial intercourse, and of the several sovereigns and states with whom the kings of England had commercial treaties. For we may reasonably conclude, that a trade existed when it was regulated by treaties.

Genoa, Venice, Pifa, Florence, and some other free cities of Italy, were at this time the chief feats of trade in Europe; and their merchants furnished

Vol. VIII.

their

³ Warton's History of Poetry, vol. 1. p. 279. note b.

⁴ Bartholemeus de Proprietatibus Rerum, apud Sir John Hawkins's History of Music, vo'. 2. p. 126.

their own and other countries with the filks, spices. and other precious commodities of the east. is the fullest evidence, that all these cities now carried on a trade with England, and some of them with Scotland. In a letter from Edward II. dated July 18, 1316, to the state of Genoa, he expostulates with them for permitting some of their citizens to carry on a trade with the traitor Robert Bruce, and the people of Scotland; and in order to engage them to prohibit that trade, he puts them in mind that a very ancient and friendly intercourse had subfisted between their state and his ancestors, kings of England, and their subjects'. Several commercial treaties were concluded between Edward III. and the Genoese. The trade between the Venetians and the English was very considerable, as appears from the following incident. quarrel happened between the crews of five Venetian ships lying at Southampton, and the people of that town, in which several persons were killed on both fides. Edward II. dreading that this might deter the Venetians from continuing their trade with England, published a manifesto, granting a full pardon to all who had been concerned in that unhappy quarrel, and promifing the most perfect fecurity and friendly treatment to all Venetian merchants and mariners who should come into England 7. The commercial compacts of the kings of England with the cities of Florence and

⁵ Rym. Fæd. tom. 3. p. 565.

⁶ Id. tom. 5. p. 569. 703.

⁷ Id. tom. 3. p. 1011.

Pifa, are sufficient evidences of their mutual trade .

The merchants of Majorca, Sicily, and fome Mediterother islands in the Mediterranean, carried on a islands. trade with England in this period. Edward II. who was a zealous promoter of the commerce of his subjects, made a commercial compact with the ambassadors of Sancho king of Majorca, A. D. 1323 %

Several commercial treaties were concluded be- Spain. tween the kings of England and Spain at this time; and, like many other treaties, were often violated by mutual captures of each other's ships; which produced mutual complaints and new treaties. In a truce for twenty years, concluded between Edward III. and the plenipotentiaries of the sea-ports of Castile and Biscay, A. D. 1351, the most perfect reciprocal freedom of trade is stipulated; after which the following remarkable article is added:-" Item, the fishers in the do-" minions of the king of Castile and Biscay may " come and fish freely and safely in the harbours es of England, and in all other places where they er please, paying the king his duties and cuses toms 19."

A trade was carried on between England and Portugal in this period, to their mutual satisfaction: and advantage, till it was interrupted by the Spaniards or Castilians; who, carrying Portuguese

⁸ Rym. Ford. tom. 2. p. 953; tom. 5. p. 734.

⁹ Id. tom. 3. p. 1018.

colours, took and plundered several English ships; and the English, before they discovered the deceit, made reprisals upon the Portuguese. But as soon as the imposition was found out, the two nations returned to their former friendly intercourse; which was consirmed by a commercial treaty A. D. 1308.

English provinces in Prance.

The commerce of the English with their own French provinces of Aquitaine and Gascony, was very considerable. Of this it is a sufficient proof, that two hundred merchant-ships from England were sometimes seen together in the harbour of Bourdeaux 12.

France.

The trade between the English and the subjects of the crown of France, in this period, was not so great as might have been expected. This was owing to various causes. Several of the maritime provinces of France were then in the possession of other powers;—the French were not much addicted to commerce;—and the most violent animofities, and very frequet wars, subsisted between the two nations. Their commercial intercourse was so inconsiderable, that it was never mentioned in any of their treaties. Even in the famous treaty of peace at Bretigny, A.D. 1360, dommonly called the great peace, there is not fo much as one word concerning trade 13. There is, however, sufficient evidence, that some trade was carried on between the French and English in

¹² Rym. Fæd. tom. 3. p. 107.

¹² Rym. Fæd. tom. 6. p. 178-196.

times of peace. Philip king of France complained, in very strong terms, to Edward II. A.D. 1314, that the merchants of England had defisted from frequenting the fairs in his dominions with their wool and other goods, to the great loss of his subjects; and intreated him to perfuade, and, if necessary, to compel them to frequent the fairs of France as formerly, promifing them all possible fecurity and encouragement 14.

Edward II. at the request of John duke of Brabant, Brabant, Lorrain, and Luxemburg, granted permission to the subjects of that duke to come with their ships and merchandises into England, promising them protection and several privileges 15.

A commercial treaty was concluded between Bretagne. Edward II. and John duke of Bretagne, A.D. 1317, in which each of the contracting parties promifed protection and friendly treatment to the mercantile subjects of the other in his dominions 16.

Certain disputes having arisen between the mer- Holland, chants of England and those of Holland, Zealand, and Friseland, William earl of Holland, Zealand, and Hanneau, and lord of Friseland, fent ambassadors into England, A.D. 1310, to fettle these disputes: which was accomplished; and a balance of 1300l. sterling was found due to two companies of English merchants. To pay

this balance, the earl of Holland agreed, that certain additional duties should be laid on the ships and goods of his subjects in the ports of England 17.

Flanders.

As the great manufacturing towns of Flanders were the chief markets for English wool, the commercial intercourse between England and these towns was very great, and regulated by many treaties. So necessary was this intercourse esteemed by both parties; that it was not interrupted even when the earls of Flanders were at war with the kings of England.

Germany and the Hanfe towns.

The trade between Germany and England, in this period, was chiefly carried on by the famous confederacy of the Hanse towns. This confederacy was very ancient, and by degrees became. the greatest maritime power, as well as the greatest trading company, in Europe. Before the end of this period the Hanseatic confederacy consisted of fixty-four cities and great towns, chiefly fituated on the shores of the Baltic, and the banks of the Rhine, and of other navigable rivers of Germany. The trade which these Hanse towns carried on with England was very great, and was chiefly managed by a company fettled in London, and invested with various privileges, called-the German merchants of the steel-yard 29.

Ch. 6.

The knights of the Teutonic order, or, as they Prussia. called themselves, the Dutch knights of St. Mary's hospital at Jerusalem, having made themselves masters of Prussia, Conradus de Zolner, grand master of that order, concluded a commercial treaty with Richard II. A.D. 1388, in which protection and friendly treatment were stipulated to the English merchants in Prussia, and to the Prussian merchants in England 21.

Before the conclusion of this period Sweden Sweden. began to make some figure as a commercial state; and the great queen Margaret published, A. D. 1396, some very wise regulations for the encouragement of trade, in which he promifed protection to all foreign merchants, particularly to the English, from whose king, Richard II. she had borrowed three large ships of war ...

The Danes, who had long been the scourge Denmark. and terror of Europe by their piratical expeditions, had now lost much of their ferocity, as well as of their power, and traded peaceably with other nations, and particularly with the English. This appears by a letter from Eric king of Denmark to Edward I. A. D. 1304, promising protection and friendly treatment to all English merchants in his dominions 23.

The most ancient commercial treaty between a Norway. king of England and a foreign prince, with which

at Hakluyt's Voyages, vol. 1. p. 150.

²³ Id. tom. 2. p. 949,

we are acquainted, is that which was concluded between Henry III. in his minority, A. D. 1217, and Haquin king of Norway. In this treaty, which is plain and short, agreeable to the manners of the times, these princes promise protection and favour to each other's mercantile subjects in their dominions 24. The commercial intercourse between England and Norway was fecured and regulated by a more prolix and particular treaty A. D. 1269 25.

Iceland.

The people of Blackney in Lincolnshire carried on a confiderable trade with Iceland in this period, and on that account they obtained a charter from Edward III. exempting their failors and ships from being impressed into the king's service 25.

Ireland.

Though the trade of Ireland appears to have been regulated by English laws in the thirteenth century, these laws did not confine it within narrow limits. By the statute of Ireland, A.D. 1288. the king's officers are prohibited from feizing foreign ships, or molesting foreign merchants, in the ports of Ireland: and the Irish are permitted to export their corn, provisions, and other commodities, to any country not at enmity or war with the king of England 27. The freedom of trade to and from Ireland was still further secured by another law A.D. 1360 28.

That

²⁵ Id. tom. 2. p. 858. 24 Rym. Foed. tom. 1. p. 223.

. That violent national animosity with which the Scotland. minds of the two British nations began to be inflamed against each other, soon after the unfortunate death of Alexander III. of Scotland, put an end to the friendly intercourse which had subsisted between them in the first part of this period. From that time these two nations hardly exchanged any thing but wounds and injuries for one hundred years. During this hostile period, the three Edwards, fuccessively kings of England, not only prohibited their own subjects from trading with the Scots, but laboured with the greatest earnestness to prevent other nations, and particularly the Flemings, from having any commerce with that people. This they could not accomplish: for the earls of Flanders constantly replied to all the folicitations of these powerful princes,-" That they did not encourage the Scots in their wars, but that they could not exclude 44 them from their ports, without doing a great " injury to their own subjects, who depended very " much upon trade 29." This animofity between the two British nations proved as permanent as it was violent; and no less than a whole century elapsed before any regular commercial intercourse between them was renewed. This was at length restored by the following article, in a truce concluded between the wardens of the marches of both kingdoms A. D. 1386:-" Item, it is so acordit, that special assurance sal be on the see,

" fra the water of Spie to the water of Tamye, for all marchands of bath the roialms, and here godes 30."

Imprudent commercial laws.

The many laws that were made in England, in our present period, for the regulation and encouragement of trade, afford a further proof of its importance. Some of these laws were wise and useful, while others of them were imprudent and hurtful. Of the last fort was the law of Edward II. A. D. 1314, fixing a certain price upon provisions of all kinds, which produced a famine, and was foon repealed 31. Of the same skind was the law of Edward III. A. D. 1363, commanding that no English merchant should deal in any more than one commodity, either by himself or by a factor in any manner; and requiring every merchant to fix upon the commodity in which he refolved to trade, before the term of Candlemas 32. This abfurd law was also foon repealed. be questioned whether the remarkable laws and constitutions of the staple, which required all English traders to bring the chief commodities of the kingdom, viz. wool, wool-fells, leather, lead, and tin, to certain towns, to be there fold to merchantstrangers, were prudent or useful; but there can be no doubt, that the law which made it felony for any Englishman, Welshman, or Irishman, to export any of those commodities, was most im-

³⁰ Rym. Fæd. tom. 7. p. 527.

³¹ T. Waifing. Hift. Ang. p. 107.

³² Statutes, 37th Ed. III. p. 314.

prudent and pernicious 35. Of the same pernicious tendency was that law of Edward III. made A. D. 1368, prohibiting English merchants to import wine from Gascony, or to buy such wine till it was landed in England by a merchantstranger 36. Nothing could be more unjust and cruel, as well as impolitic, than the famous law or custom which long prevailed in England, of making every foreign merchant responsible for the debts, and even punishable for the crimes, of any of his countrymen who had become infolvent, or had escaped from justice. This most unreasonable law was abrogated by the seventeenth chapter of the statute of the staple, A. D. 1353 35. Several other laws were made in this period, which discover the anxiety of the kings and parliaments of England about commerce, and at the fame time betray their ignorance of its real interests.

But some commercial laws were also made of a more falutary tendency. Such were the several laws for the uniformity of weights and measures ³⁶. But unhappily these laws were not so well contrived and executed as to prove effectual. The navigation acts made in the reign of Richard II. commanding English merchants to freight none but English ships, were evidently wise, and probably contributed to the encrease both of ships

Wifecommercial laws.

and failors in England in succeeding periods ". But it seems to have been the chief object of the English legislature in this period, to invite foreign merchants to import the commodities of their respective countries, and export those of England. With this view, many statutes were made, promising protection and friendly treatment, together with various privileges and immunities, to merchants of all countries, upon conditon that they paid their debts, and the king's customs punctually 32.

Many foreign merchants fettled in England.

These laws for the encouragement of foreign merchants were not ineffectual. Great numbers of foreign traders, then called merchant-strangers, were settled in London and other great towns of England, and formed into companies, some of which were a kind of corporations. As these companies of merchant-strangers almost wholly engrossed the foreign trade, and had a considerable share of the internal commerce of England, a few of the chief of them may be mentioned.

Merchants of the feel-yard. The German merchants of the steel-yard in London formed the most ancient, and for several centuries, the most flourishing of these foreign companies. This company had been settled in England even before the conquest; but it became much more powerful and opulent in the

³⁷ Statutes at Large, 5th Richard II. ch. 3. 14th Rich. II. ch. 6. 38 Id. 9th Henry III. ch. 30. 2d Edward I. 13th Ed. I. ch. 1. 14th Ed. III. ch. 2. 25th Ed. III. ch. 2. 2d Rich. II. ch. 7. 5th Rich. II. ch. 1.

course of this period, than it had been before 29. This was owing to its connection with the famous confederacy of the Hanse towns, and to the additional privileges conferred upon it by all the English monarchs of those times .

The company of the merchants of the staple was formed about the beginning of this period; chants of the staple. and in the course of it became very considerable for the number of its members and importance of its transactions. The views with which this company was established, and the privileges with which it was invested, are worthy of our attention, as they discover the ideas that were then enter-It was established to answer these tained of trade. two ends: 1st, To purchase and collect all that could be spared of the chief commodities of the kingdom; which were these five, wool, wool-fells, leather, lead, and tin; and to convey them to certain towns, which were called flaple-towns, that the king's customs might be collected with ease, and that foreign merchants might know where to find these commodities in sufficient quantities: adly. To export these staple-wares to foreign countries, and to import returns for them in goods, coin, or bullion. Natives as well as foreigners might be, and were employed in executing the first of these ends; but no natives of England, Ireland, or Wales, could be concerned, directly or indirectly, in exporting any of these staple-

commodities 4t. The staple-towns for England, Wales, and Ireland, appointed by the statute were-Newcastle upon Tyne, York, Lincoln, Norwich, Westminster, Canterbury, Chichester, Winchester, Exeter, Bristol, Caermarthen, Dublin, Waterford, Cork, and Drogheda 42. chants of the staple were exempted from the jurisdiction of the ordinary magistrates, and subjected only to the authority of a mayor and constables of the staple, chosen annually in each of these towns, who were to judge in all disputes by the merchantlaw, and not by the common law 43. A certain number of correctors were chosen in each stapletown, whose office it was to register all bargains, for which they received a small fee from the parties. There were also fix mediators, two Germans, two Lombards, and two Englishmen, in every staple-town, who were to determine all disputes referred to them, in the presence of the mayor and constables 45. Many privileges and immunities were conferred by law on this famous company, which formed a kind of distinct commonwealth; and it was made felony to attempt to deprive it of any of these privileges 46.

Brotherhood of St. Thomas. Another mercantile fociety, called the brotherhood of St. Thomas Becket, flourished in the former part of this period, and was afterwards incorporated with the company of merchant-adven-

turers, which made a great figure for several centuries 47.

It will be fufficient to name some of the com- Compapanies of Italian merchants that were fettled in England in this period, for managing the trade of merthe feveral states and cities to which they belonged. Of these the Lombards were the most numerous and opulent; but, becoming odious for their usurious practices, they were sometimes severely treated 48. The Caursini of Rome have been already mentioned 49. They feem to have been as great extortioners as the Lombards; for (if we may believe Matthew Paris, a contemporary historian) they fometimes exacted no less than fixty per cent. interest per annum so. This, together with their oftentatious display of their riches, drew upon them a very fevere profecution, A. D. 125151. We find the society of the Peruchi, and the fociety of the Scali of Florence. refiding in London in the reign of Edward II 52. The companies of the Friscobaldi of Florence. and of the Ballardi and Reisardi of Lucca, were also settled in England in the same reign 53. Edward III. acknowledges himself indebted to the company of the Bardi of Florence twelve thoufand marks; and grants them a present of two

thousand pounds for their good services . These examples are sufficient to prove, that several companies of Italian merchants were settled in England in this period, for managing the trade of the states, cities, and companies, with which they were connected.

Jews.

The Jews may be reckoned among the strangers settled in England on account of commerce. In the former part of this period they were numerous; and many of them had acquired great sums of money by trade and usury. But their situation was unhappy, being frequently plundered by the sovereign and universally hated by the people. At length the clamour against them for their extortions, for their debasing and diminishing the coin, and for other crimes, became so vehement, that they were banished out of England, A. D. 1290 33.

Foreign merchants hated by the people, but encouraged by our kings and barons. It was not agreeable to the English to see so great a share of the commerce of their country in the hands of strangers: on the contrary, these strangers were hated and maltreated by them, and their expulsion most earnestly desired. But they found powerful protectors in our kings, prelates, and barons (to whom they were in many respects useful), who made many laws for their security and encouragement 56. In particular, when the city of London presented a petition to Edward I.

⁵⁴ Rym. Fæd. tom. 4. p. 387. 55 Anderson, vol. 1. p. 133. 56 Statutes, 9th Henry III. oh. 30. 2d Ed. I. 13th Ed. I. ch. 1. 14th Ed. III. ch. 2. 25th Ed. III. ch. 2. 2d Rich, II. ch. 7. 5th Rich, II. ch. 1.

A. D. 1289, for the expulsion of all merchantfrangers, that great prince replied,-" I am of opinion, that merchant-strangers are useful and 66 beneficial to the great men of the kingdom; and therefore I will not expel them 57." One of our ancient historians of the best credit expresses his abhorrence of the jealousy of the Londoners, and their cruelty to foreign merchants; of which he gives the following example. A very rich merchant of Genoa prefented a petition to Richard II. A. D. 1379, for permission to deposit his goods in the castle of Southampton, pro mising to bring fo great a share of the trade of the East into England, that the price of a pound of pepper would be reduced to four pence, and the prices of all other spices in the same proportion. the Londoners (fays the historian), enemies to the prosperity of their country, hired affassins, who murdered the merchant in the street. " After 46 this (exclaims he) what stranger will trust his ef person among a people so faithless and so cruel? 66 Who will not dread our treachery, and abhor our name "?"

Foreign trade was frequently interrupted in this Piracy inperiod by the ferocious piratical disposition of the trade. mariners of all nations, who were too apt, when an opportunity offered, to plunder friends and fees without distinction. We have a lively picture of this, and of its fatal consequences, in the follow-

⁵⁷ Anderson, vol. 1. p. 131. 5 Tho. Walfing. Hift. Aug. p. 227.

ing account of the conduct of the seamen of the Cinque-ports, A. D. 1264, by a contemporary historian. "The mariners of the Cinque-ports, " having provided a powerful fleet, scoured the " feas, and greatly interrupted trade; feizing " every ship they met, and barbarously butchering their crews, whether they were foreigners " or their own countrymen: they threw their bodies into the sea, and applied the ships and " cargoes to their own use. More cruel than " Scylla or Charybdis, they murdered all who " brought necessary commodities into their coun-" try without distinction. By this means all " kinds of goods, in which England had formerly " abounded, became fo scarce and dear, that a " quantity of wine or wax which had been usually " fold for forty shillings, now cost eight or ten marks, or even more; a pound of pepper, which used to be fold for fixpence, was now " fold for three shillings; in a word, salt, iron, " fteel, cloths, and goods of all kinds, became fo " fcarce, that the people suffered much want, and "the merchants were reduced to beggary "." But these destructive violences were never carried to so high a pitch, but when the affairs of the public were in great confusion, as they were A. D. 1264.

The chief mer period.

The chief feats of trade in England were the the fame as fame in this as in the preceding period, with a in the for- few additions. The burgesses of Newcastle upon

⁵⁹ Chronicon Tho. Wykes, ad ann. 1264.

Tyne, having obtained liberty of digging coals in the castle-muir from Henry III. A. D. 1234, and afterwards the property of that muir from Edward III. A. D. 1357, they foon after began to export coals to London, and other places, in confiderable quantities 60. Encouraged and enriched by that commerce, the people of Newcastle engaged in foreign trade; and we find a ship of theirs of the burden of two hundred tons, and valued at 400 l. equal in weight of filver to 1000 l. of our money, exclusive of her cargo, was seized in the Baltic, on her voyage to Prussia, A. D. 7304 64. Though Kingston upon Hull was not founded till A. D. 1296, it encreased so fast, that in less than one century it had become a large, rich, and populous town, engaged in foreign trade. In the treaty between Henry IV. and the Hansetowns, A. D. 1400, it appears that the mariners of those towns had plundered four ships belonging to Hull, near the coast of Norway, some years before that time 62.

The exports and imports of England confifted nearly of the same commodities in this as in the preceding period; and therefore need not be here enumerated 63. I have not met with any evidence, that slaves formed an article of exportation from England in the present period. In the annals of the priory of Dunstable, we find the fol-

Exports and imports nearly the fame as in the former period.

⁶⁰ Anderson's Hist. Com. vol. 1. p 111. 138. 207.

lowing short entry, A. D. 1283:—" This year, "in the month of July, we sold our slave William Pyke, and received one mark from the buyer "." But for what purpose this unhappy man was purchased, we are not informed. If one mark was the whole of his price, men must have been cheaper than horses, or Pyke must have been a worthless fellow.

Balance of trade in favour of England.

That the balance of trade was very greatly in favour of England, in this period, is evident to a demonstration. If this had not been the case, it would have been impossible for a country, without gold or filver mines of any great value, to have fupplied those prodigious incessant drains of treafure to the court of Rome, and to foreign ecclefiastics, who possessed many of the best benefices of the kingdom; and those still greater drains occasioned by the frequent and ruinous expeditions of her princes and nobles to the continent; and by various other means. Henry III. (for example) sent out of the kingdom in a few years, in presents to his foreign favourites, and in profecuting the vain project of making his second son prince Edmund king of Sicily, the enormous fum of 950,000 marks, containing as much filver as 1,000,000 l. and of as much value as 5,000,000 l. of our money. This account the historian, who was fecretary to the king, received from a clergyman of credit, who had examined all the rolls, and carefully calculated the fums. About two

⁶⁴ Annai, de Dunstap, ann. 1283.

years after (A. D. 1257) that king's brother, Richard earl of Cornwall, carried out of England at once 700,000 l. containing rather more filver than 2,000,000 l. of our money; all which, together with the annual income of his great estate, for several years, he spent in Germany, to no effect, in attempting to support his election to be king of the Romans 65. The annual revenues of the Italian clergy in England, the greatest part of which was carried out of the kingdom, were found, A. D. 1245, to amount to 60,000 marks, or 120,000 l. of our money 66. From these few examples we may be convinced that the fums carried out of England in the course of this period were immenfely great; and yet the balance of trade in favour of England supplied these sums, and also gradually enriched the kingdom.

The greatness of this balance seems to have Causes of been owing to the following circumstance. The imports into England, in this period, confifted almost wholly of filks, fine cloths, wines, spices, and a few other articles of luxury, which were used only by the royal family, and a small number of rich prelates and great barons; and therefore, though the prices of these commodities were high, the quantity used being trifling, the whole amount was inconfiderable. It appears upon record, that the value of all the goods imported into England A. D. 1354, was no more than 38,9701. 38. 6d. 67

⁶⁵ M. Paris Hist. Angl. p. 639.

⁶⁶ Id. p. 451.

⁶⁷ Anderson Hist. Com. vol. 1. A. D. 1354.

The nominal pound at that time containing only 46 s. 6 d. of our money, this fum contained only as much filver as is now coined into 90,355 l. 55. If we suppose that any given quantity of silver would then have purchased five times as much of any commodity as the same quantity will do at prefent, it will follow, that as many goods of all kinds as were imported into England A. D. 1354 might now be imported for 451,776 l. 5 s.—a very contemptible fum indeed when compared with the value of our present imports. But, on the other hand, the exports from England confifted of commodities of general use, as wool, wool-fells. leather, lead, tin, corn, butter, cheese, coarse cloths, &c. which were exported in great quantities to several countries, where they found a ready market. Accordingly, it appears from the fame record, that in the same year 1354 the value of the four articles of wool, wool-fells, leather, and coarse cloths, exported, amounted to no less than 204,184 l. containing as much filver as 683,077 l. and of as great efficacy as 3,419,885 l. of our money. This alone, fet in oposition to the whole imports of that year, yielded a balance in favour of England of 255,214 l. containing as much filver as 593,370l. and of as great efficacy as 2,966,850 l. of our money at present s': 'a very great balance, though we have no account of the lead, tin, corn, and other articles exported.

Book IV.

⁶⁸ Anderson Hist. Com. vol. 1. A. D. 1354.

Mosteffectual means of turning thebalance of trade in vour.

From the above state of the trade of England in this period it plainly appears, that though it was trifling in comparison to what it is at present; yet, in proportion to its extent, it was unspeakably more advantageous to the nation. From hence also it is evident, that the most effectual means which any people can employ for turning the balance of trade in their own favour are these two. —to be sparing in the use of imported luxuries. and to be diligent in preparing articles of general utility for exportation.

exchange.

That most excellent device for the payment of Bills of accounts between merchants residing in different countries, by bills of exchange, without the actual transmission of cash, was not unknown in England in the present period. We find Peter Egiblanke bishop of Hereford employing this contrivance, A. D. 1255, to a very pernicious purpose. Henry III. had contracted an immense debt to the pope in profecuting the abfurd project of making his fon Edmund king of Sicily; and his holinefs, who was much indebted to certain Italian merchants, who had advanced money for carrying on the war, had become importunate for payment. In this extremity the bishop of Hereford suggested to Henry the following curious scheme for the payment of all his debts without money.—That the Italian merchants to whom the pope was indebted should draw bills in favour of their creditors in England, on all the rich bishops, abbots, and priors, in that kingdom, for certain large fums of money alleged to have been lent by

them to these prelates for the use of their respective churches: 'that these bills should all be sent to the pope's legate in England, who should compel the prelates to accept and pay them, by threats of ecclesiastical censures. This iniquitous scheme was adopted by the king; and the bishop was sent to Rome to procure the pope's confent and concurrence. These were easily procured: the bills. to the amount of 150,540 marks, were drawn and presented; and the prelates, after many remonstrances, were compelled to pay them, by threats of excommunication 69. The answer of the pope to the bishop, when he had explained his scheme to him, affords a curious specimen of the morality of the infallible head of the church in the thirteenth century: "Go (said his holiness), my dearest friend and brother, and do what seemeth 66 best to your own industry, which I very much " commend "." As mercantile transactions increafed, the use of bills of exchange became more common; and a law was made A. D. 1381, encouraging, or rather commanding, the use of them, in making remittances to foreign countries 74.

Money.

Money or coins are of fo much use in commerce, that the state of them must be briefly delineated in every period of this work. As none of our writers who slourished in the thirteenth or fourteenth century make mention of living money, we may conclude, that coins made of the precious

7º Id. ibid.

metals

⁶⁹ M. Paris Hift. Ang. p. 612. 71 Statutes, A. D. 1381. chap. 2.

metals were now become the only representatives of all commodities. It is only money of that kind therefore with which we are here concerned.

The coins of both the British kingdoms con- Changes in tinued in the same state in which they had been in the coin. the former period, during the whole of the thirteenth, and some part of the fourteenth century 72. Edward III. made a very material alteration in the state of the coin of England A. D. 1346, by commanding 22 s. 6 d. to be coined out of the towerpound of filver. By this regulation the weight of the filver penny, which was still the largest real coin, was reduced from 22 1 to 20 Troy grains, and the pound to 51s. 8d. of our money 73. The same prince made a still greater change A. D. 1351, by coining groats and half-groats, the groats weighing 72 Troy grains, and 60 of these groats making a nominal pound sterling, containing only as much filver as 46 s. 6 d. of our money 74. This fecond diminution of the weight of the coin is faid to have been made by the perfuafion of William Edington bishop of Winchester. and treasurer of England 15.

The coinage of gold was one of the greatest Goldeoin. alterations made by Edward III. in the state of the coin. By the advice of his council, A. D. 1344, January 20, he commanded florins of gold to be coined, and to pass for 6s. half florins for 3s. and

quarter

⁷⁵ Stow Annal. p. 251. T. Walfing. p. 169.

quarter florins for 1 s. 6 d. of the money of that But Edward, aiming at too much profit by this coinage, had fet too high a value upon these pieces, which prevented their currency. To remedy this, he coined that same year gold nobles, half nobles, and farthing nobles, the noble to pass for 6 s. 8 d. the half noble 3 s. 4 d. and the farthing noble for 1 s. 8 d. which he made known by a proclamation, dated 9th July A. D. commanding those coins to be taken in payment at these rates 77. By another proclamation, dated August 20, the same year, he commanded all the gold of the first coinage to be brought to the mint, and fold for its real value 78. In the first coinage a pound of gold was rated at 15 pounds of filver, in the fecond only at 12 l. 2 s. 4 d. 79. This coin was called a noble, either on account of its value and beauty, being the largest and fairest then known, or on account of the honourable occasion on which it was struck, the great naval victory over the French, obtained by Edward in person, A. D. 1340: for on that coin Edward appears completely armed, in a ship, with a naked sword in his right These nobles, half and quarter nobles, continued to be the chief gold coins of England to the end of this period.

Method of coining.

The method of coining money in this period was very simple. The metal was cast from the melting-

⁷⁶ Rym. Foed. tom. 5. p. 403.

⁷⁷ Jd. ibid. p. 416.

⁷⁸ Id. ibid. p. 424.

⁷⁹ Stephen Martin Leake's History of English Money.

pot into sheets or long thin bars; these were cut with shears into square pieces of exact weights, according to the species of coin intended; these pleces were formed into a round shape by the hammer, after which those of filver were blanched or made white by boiling; and, last of all, they were stamped or impressed by a hammer, which finished the operation 80.

It was not so easy a matter, in the times we are Royal exnow confidering, to exchange gold and filver coins for each other as it is at present; and therefore Edward III. and several of his successors, took this office into their own hands, to prevent private extortion, as well as for their own advantage: and they performed it, by appointing certain perfons, furnished with a competent quantity of gold and filver coins, in London and other towns, to be the only exchangers of money, at the following rate. When these royal exchangers gave filver coins for a parcel of gold nobles, for example, they gave one filver penny less for each noble than its current value; and when they gave gold nobles for filver coins, they took one penny more, or 6 s. 9 d. for each noble; by which in every transaction they made a profit of 1.7 per cent. 81. These royal exchangers had also the exclusive privilege of giving the current coins of the kingdom in exchange for foreign coins, to accommodate merchant-strangers. and of purchasing light money for the use of the

change.

so Stephen Martin Leake's History of English Money, p. 76.

⁸¹ Rym Foed. tom. 5. p. 4.6.

Book IV.

mint. As feveral laws were made against exporting English coins ⁵², the king's exchangers at the several fea-ports surnished merchants and others who were going beyond seas, with the coins of the countries to which they were going, in exchange for English money, according to a table which hung up in their offices for public inspection ⁵³. By these various operations they made considerable profits, of which the king had a certain share. The house in which the royal exchanger of any town kept his office was called the Exchange; from which, it is probable, the public structures where merchants meet for transacting business derive their name.

Clipping, &c. prevailed. The crimes of clipping and counterfeiting the current coin of England, and of importing base money of various denominations, as pollards, crokards, mitres, leonines, rosaries, staldings, steepings, and eagles, prevailed very much in the present period, though several severe laws were made against them ⁵⁴. The Jews are said to have been remarkably guilty of these pernicious practices; and their guilt must have been very great indeed, if it was equal to their punishment: for no sewer than 280 of them were put to death for these crimes, in one year (1279), in London alone, besides many others in other parts of Eng-

land ⁸⁵. At the fame time all the goldfmiths in the kingdom were feized and thrown into prison, on suspicion of being guilty of the same crime ⁸⁶.

Though the difference in weight between a real State of pound of filver and a nominal pound in coin feems Scotland. to have commenced in both the British kingdoms nearly about the same time, yet that difference foon became confiderably greater in Scotland than in England. The following proclamation, issued by Edward III. A. D. 1355, is an unquestionable evidence of both these facts: " The ancient 66 money of Scotland was, till these times, of the see fame weight and alloy as our sterling money of " England; and therefore did always pass current " in England. But because new money of the " fame form and denomination with the old, but of inferior weight and finenels, hath been lately coined in Scotland, and is current in our king-"dom, it is necessary to prevent this, which "would be a manifest loss to our people. " command, therefore, that proclamation be made, in all cities, towns, &c. That none of our fub-" jects take that new money of Scotland in payer ment, except for its real value as bullion to be or brought to our mint; and that the old money " shall have the same currency as usual 87." How much this new money of Scotland differed from

- English money, we are not informed; but it is

probable

⁸⁵ Anderson's Hift. Com. vol. 1. p. 129. T. Walsing. Hift. Angl. p. 48. Hemingford. Hift. Ed. I. p. 6.

⁵⁶ T. Wykes Chron. ann. 1279.

⁸⁷ Rym, Foed. tom. 5. p. 813.

probable the difference was not very perceptible, fince a royal proclamation was necessary to put the people upon their guard against taking it in payment. But the difference increased so fast, that before the end of the century, the coins of Scotland were not above half the value of those of England of the same denomination. This appears from the 12th chapter of the statutes made at Westminster, A. D. 1390,—" The great of Scot- land shall pass only for two pence in England; the half-groat for one penny, the penny for a "half-penny, and the half-penny for a far- thing status."

High interest of money.

The high premiums that were usually paid for the use of money borrowed, must have been a great obstruction to trade in this period. church of Rome still continued to prohibit lending money on interest, declaring it to be usurious and Though this could not prevent fuch heretical. transactions, it prevented their being regulated by law; and therefore the rate of interest varied according to the necessities of the borrower, the avarice of the lender, and many other circumstances. It hath been already observed, that the Caursini, who were agents for the pope in England, sometimes extorted no less than fixty per cent. per annum. For this, it is true, they were excommunicated by Roger bishop of London, A. D. 1235; but they were protected by the pope, who, fays the historian, was suspected of being their

[#] Statutes, 14th Richard II. ch. 12.

accomplice; and none, we may prefume, who had not so powerful a protector, would have dared to be guilty of fuch intolerable extortion *9. In general, therefore, we may be certain, that the premium demanded for the use of money was commonly much lower, most probably about twenty per cent., per annum, or under 90. In the marriage-contract of Margaret daughter of Alexander III. king of Scotland, with Eric king of Norway, A. D. 1281, it is stipulated, that if any part of the princes's fortune (which was 14,000 marks) was not paid at the terms agreed upon, the king of Norway should be immediately put in possession of estates in Scotland, as a security for the money, and for payment of the interest; and that an estate given him in fecurity for a thousand marks should yield at least one hundred marks of yearly rent. being an interest of ten per cent. per annum 91. But as this was an amicable transaction between two princes, contracting a near alliance, and the fecurity was a real estate, it is probable, that the interest was much lower than the ordinary rate exacted by private money-lenders on personal security. It may be observed, in passing, that the greatness of the portion of this princess is one proof, amongst many others, that the wealth of Scotland bore a much greater proportion to that of England before the death of Alexander III. than ever it did after that fatal event.

Comparative va ue of money, and expence of living.

So much hath been faid in the 6th chapter of the 3d book of this work, concerning the comparative value of money, and expence of living, in the eleventh and twelfth centuries, and in the present times, that it will not be necessary to say much on these subjects here, as no very remarkable change in these particulars seems to have taken place in the present period 92. To near the middle of the fourteenth century, a nominal pound sterling in coin was a real pound of filver, or about three of our nominal pounds; and the same quantity of filver, as an ounce, or a pound, would have then purchased as many of the necessaries of life, as five ounces, or five pounds, will do at present. the above computation is not far from the truth, might be proved from many facts mentioned by our ancient historians; but the two following, it is hoped, will be thought fufficient. One of these historians speaking of fir William de Lisle, the tyrannical sheriff of Northumberland, A. D. 1256, fays,-"He was rich, having an estate which was reckoned "worth one hundred and fifty pounds a-year 93." According to the above computation, fir William was as rich as a gentleman is at prefent who hath a clear estate of 2250 l. a year; who may indeed be called rich, though many private gentlemen are much richer. Another historian, who flourished in the fourteenth century, acquaints us, that the ordinary salaries of curates, before the great pestilence A. D. 1348, were four or five marks a-year; equi-

⁹² See vol. 6. ch. 6. p. 302-307.

⁹³ M. Paris, p. 627...

valent, according to the above supposition, to forty or fifty pounds at prefent, which may be called the ordinary falaries of curates in our times 94. true, indeed, that in the year after the pestilence curates demanded ten or twelve pounds a-year: but these demands were owing to the great scarcity of elergymen; they were thought exorbitant, and were restrained by law 95.

Sailors and ships being the great instruments of Sailors. foreign trade, the prosperity of every commercial country, especially of an island, must depend very much on the multitude and dexterity of its failors. and the number and goodness of its ships. English failors preserved, through the whole of this period, that character of superior skill in navigating their ships, and superior courage in combating their enemies, which they had long poffeffed, and which they still possess. This is evident from their exploits, and from the testimony of contemporary historians. The victory near Sluys, A. D. 1340, was certainly one of the greatest ever obtained by the English over the French at sea: that victory is faid to have been chiefly owing to the fuperior dexterity of the English sailors in the management of their ships of. The monk of Malmibury, who wrote the history of Edward II. in whose reign he flourished, gives the following character of English sailors, A. D. 1315:- Enge

" lish ships visit every coast; and English sailors excel all others, both in the arts of navigation, and in fighting "."

The shipping of England did not increase, but rather decreased, in this period.

It is difficult or rather impossible to discover the exact state of the shipping of England in this period, at this distance of time, though we have some reason to think that it did not increase either in the fize or number of ships, if it did not decrease. We learn from an authentic record, that the largest thip of war in England, A. D. 1304, had only a crew of forty men; and in the fleet of Edward III. at the fiege of Calais, A. D. 1346, the complement of each ship, on an average, was only twenty-men 94. Some of the kings of England had very large fleets under their command in this period, which might make us imagine that ships were then very numerous. Edward III. at the above siege, had a fleet of seven hundred English, and thirty eight foreign ships; and the same prince, when he invaded France A.D. 1359, is faid to have had no fewer than eleven hundred ships 99. But these great fleets consisted of all the ships in all the ports of England, which, on such emergencies, were impressed, together with their crews, into the king's fervice. It appears from many of the presswarrants of those times, that the persons to whom the execution of them was committed, had authority, not only to feize all ships and vessels, great

⁹⁷ Mon. Malmf Vita Ed. II. an. 1315. p. 157.

and small, in the several ports, but all that came in from sea during the continuance of their commission: to cause those that were loaded to be immediately unloaded, though they had not reached their intended port, and to conduct the whole, with all their crews, to a certain place, for the king's service '00. Besides all this, Edward III. called a kind of naval parliament, A. D. 1344, commanding each sea-port to send a certain number of commissioners to London, to give him an exact account of the state of shipping in his kingdom ". From this naval parliament, as well as from other evidences, it appears, that Yarmouth abounded more in shipping, at that time, than any other port in England, London perhaps excepted. For London and Yarmouth were required to fend a each four commissioners, while Bristol, Newcastle, and other great trading towns, were required to fend only two, and many others only one 102. all these circumstances are considered, it seems not improbable, that our kings had sometimes one half at least of all the ships of England in their service : particularly Edward III. when he invaded France A. D. 1359. But the complaints of the commons in parliament on this head, afford the clearest proof of the decrease of shipping; and it was to remedy this great evil, that the first navigation-act was made A. D. 1381, as appears from the pre-

200 Rym. Fæd. tom. 5. p. 3. 6. 12. 23, 24. 243. 300. 304; tom. 6. p. 167. 169, &c.

202 Id. ibid.

amble 103. By that act all English merchants were commanded to freight none but English ships, under the penalty of forfeiting all the goods they embarked in foreign bottoms. But it was soon found that this act could not be executed without interrupting and diminishing the trade of native English merchants, and therefore permission was granted, by another act, A. D. 1382, to freight foreign vessels when they could not procure English ships 104.

Causes of the decrease of shipping.

It is not difficult to discover the causes which prevented the increase, and even occasioned a diminution, of the shipping of England in this period. The chief cause of this unquestionably was, the great encouragement given to merchant-firangers, who carried on a great part of the trade in foreign bottoms. The frequent seizure of English sailors and ships by government, was also a disadvantage. from which foreigners were exempted by the most folemn stipulations 105. Upon the whole, the abounding of merchant-strangers was more convenient to our kings (to whom they advanced great fums of money) than beneficial to their fubjects: and the violent clamour of the English against them was not fo unreasonable as it hath been represented by some of the historians of those times.

Mariner's compass.

The failors of this period enjoyed a great advantage above their predecessors in the use of the mariner's compass, which encouraged them to

¹⁰⁴ Id. A. D. 1382. ch. 8, 1

¹²⁵ Anonymi Hikoria Edwardi III. an. 1337.

venture more boldly on the open sea, and to steer a more direct course to their intended port. principles of that instrument were not quite unknown before this time, and some faint attempts had even been made to apply them to navigation; but a convenient method of doing it was not then The honour of inventing the discovered 106. mariner's compass hath been given to several different persons; but upon the whole it seems to be most probable, that the world is indebted for this most useful invention to Flavio de Gioca of Amalphi, who, about A.D. 1302, constructed a compass with only eight points, which was afterwardsimproved at different times and in different countries 107.

But notwithstanding this advantage, sew discoveries of unknown countries were made in this period, either by British or foreign sailors. Nicolas de Lenna, a Carmelite friar, is said to have made sive voyages for discovery towards the north pole, in the reign of Edward III. and to have presented a description of the countries which he had discovered to that king; and it is also reported that one Macham an Englishman discovered the island of Madeira, A. D. 1344 108. But it must be confessed, that the relations we have of these discoveries are very impersed, and in some particulars not very probable. Pope Clement VI. November

Few dif coveries of unknown countries made in this period.

15th, A. D. 1344, created Lewis of Spain king of the Fortunate Islands, supposed to be the Canaries, after his holiness had preached a sermon to prove, that he had the sole right of creating kings and bestowing kingdoms 109. But so impersed were the hints which had been received of these islands, that this new monarch was never able to discover in what part of the world his dominions were situated. The Canaries, however, were actually discovered A. D. 1395, by some Spanish and French adventurers; and this seems to have been the furthest point towards the south-west to which any Europeans had proceeded by sea, at the end of the sourteenth century 110.

T R Y H I S

OF

GREAT BRITAIN.

O O K IV.

CHAP. VII.

History of the Manners, Virtues, Vices, remarkable Customs, Language, Dress, Diet, and Diversions of the people of Great Britain, from the death of king John A. D. 1216, to the accession of Henry IV. A. D. 1399.

HE Romans, Saxons, Danes, and Normans, Changes by their conquests and settlements in this island, made great and conspicuous changes in the manners, cultoms, &c. of the inhabitants of those this as in parts of it in which they fettled. These changes have been described in their proper places in the preceding volumes of this work. But as no foreign nations made any conquests or settlements in any

Aa4·

part

part of Britain in the present period, the asterations in manners, &c. which then took place, were only such as were naturally brought about by the instability of the humours, fashions, circumstances, and affairs of mankind, and by the gradual progress of society. These alterations, however, upon an attentive examination, will be found considerable and worthy of a brief delineation.

Fudden
hanges in
mauners,
ac.

The manners and characters of nations fometimes change very fuddenly with their circumstances. Of this we meet with several striking examples in the history of England in the present period. The national character and manners of the English during the civil wars and great relaxation of the reins of government in the reign of Henry III. are thus described by a contemporary historian, A. D. 1267: " In these five wears past there have been so many battles. 69 both by land and fea, fo much flaughter and destruction of the people of England, so many 46 devastations, plunderings, robberies, thests, sa-" crileges, perjuries, treacheries, and treasons, " that the nation hath lost all sense of distinction so between right and wrong, virtue and vice. 46 a word, fuch hath been the infignificancy of et the laws, through the weakness of the king. " that every one did whatever feemed good in " in his own eyes"." No part of the national character of the English is more unquestionable than their valour; and yet (if we may believe the best

² Chron. T. Wykęs, an 1267. p. 33.

of our ancient historians) they were so much dispirited by their great defeat at Bannockburn, A. D. 1314, that they lost all their wonted courage for a season, and degenerated into dastardly poltroons. The consternation of the English, on that occasion, is painted by one of these historians in the following mournful strain: " O day of vengeance of and misfortune, odious accurfed day, no longer " to be computed in the circle of the year, which " stained the glory of the English, spoiled us, and " enriched the Scots to the value of two hundred thousand pounds! How many illustrious barons " and valiant youths, how many noble horses and " beautiful arms, how many precious vestments " and golden vessels, were carried off in one cruel "day 2?" "At that time (says another of these " historians) many of the English fled to the Scots, " and joined with them in their invasion of Nor-"thumberland, plundering towns and castles, de-" folating the whole country with fire and fword, " and carrying away the wretched inhabitants into captivity, with their horses, herds, and flocks, " without meeting with any refistance. " English at that time had so entirely fallen from 66 their ancient valour, that a hundred of them " used to fly at the approach of two or three "Scotch men 3." But this eclipse of the native bravery of the English was not of long duration, and nothing could be more unreasonable, than to

Monach. Malmf. Vita Edwardi II.

^{3 %} Walting. p. 196,

form our opinion of the national character of any people from its appearance in a feason of anarchy or despair.

National characters not to be taken from some monkish historians.

Neither would it be fafe to form our notions of the national character of the people of England in this period, from the pictures which are drawn of it by some of the monkish historians of those times. The monk of Malmsbury, in particular, who wrote the life of Edward II, paints his countrymen and contemporaries in the blackest colours. "What advantage (fays he) do we reap " from all our modern pride and infolence? In " our days the lowest poorest wretch, who is not " worth a halfpenny, despises his superiors, and er is not afraid to return them curse for curse. "But this, you fay, is owing to their rusticity. "Let us see then the behaviour of those who " think themselves polite and learned. Where er do you meet with more abuse and insolence " than at court? There every one, fwelling with " pride and rancour, fcorns to cast a look on his " inferiors, disdains his equals, and proudly rivals " his fuperiors. The fquire endeavours to out-" shine the knight, the knight the baron, the ba-" ron the earl, the earl the king, in dress and " magnificence. Their estates being insufficient "to support this extravagance, they have re-" course to the most oppressive arts, plundering " their neighbours and stripping their dependents almost naked, without sparing even the priests " of God.—I may be cenfured for my too great " boldness, if I give an ill character of my own " countrycountrymen and kindred; but if I may be per-55 mitted to speak the truth, the English exceed se all other nations in the three vices of pride, es perjury, and dishonesty. You will find great es numbers of this nation in all the countries se washed by the Greek sea; and it is commonly ** reported that they are infamous over all these se countries for their deceitful dealings "." we must remember, that this picture was drawn by a peevish monk, in very unhappy times, when faction raged with the greatest fury, both in the court and country.

Nor would it be proper to take the national Nor from character of the people of Britain, in this period, from their contemporaries on the continent. French were enemies to the English; and the Italians of those times affected to consider all other nations as barbarians. Even the illustrious Petrarch, the politest scholar, as well as the greatest poet, of the fourteenth century, could not divest himself of this prejudice. " In my youth (fays 66 he), the inhabitants of Britain, whom they call English, were the most cowardly of all the bars barians, inferior even to the vile Scots ." Sir John Froissart, famous for his frankness and sincerity, who was well acquainted with the English, doth justice to their valour, on many occasions: but blames them for their infolent and disgusting

behaviour

⁴ Monach. Malmf. an. 1315. p. 153. 160.

⁵ Petrarchi Opera, Epist. famil. 1. 22. Ep. 2. Memoires pour la Vie de Petrarque, tom. 3. p. 553.

behaviour to the people of other nations. "When " I was at Bourdeaux, a little before the departure of the prince of Wales on his expedition " into Spain, I observed, that the English were so or proud and haughty, that they could not behave " to the people of other nations with any appear-44 ance of civility. Even the gentlemen of Gaf-" cony and Aquitaine, who had lost their estates in fighting for them, could not obtain the 66 smallest place of profit from them, being const stantly told, that they were unfit for, and unworthy of, preferment. By this treatment they 46 lost the love, and incurred the hatred, of these " gentlemen; which they discovered as soon as an opportunity offered. In a word, the king " of France gained these gentlemen, and their countries, by his liberality and condescension, 46 and the English lost them by their haughti-" ness." This character was written by a Frenchman, not long after the glorious victory of Poictiers; on which we need not wonder that the English were elated. But though some degree of haughtiness in such circumstances may be excusable, it is always offensive and imprudent. Sir John Froissart's character of the Scots is still more unfavourable. When John de Vienne, admiral of France, conducted a gallant troop of one thousand knights and esquires, the very flower of chivalry, into Scotland, A. D. 1385, to excite and affift the Scots to invade England, the no-

⁶ Froissart, tom 3. ch. 20. p. 75.

blemen and gentlemen of that troop complained bitterly of the poverty of the country, and of the rudeness and incivility of the people. Scots (fays he), being naturally fierce and un-66 polished, hated and despised the French, and e gave them the most contemptuous names they could invent. For in Scotland there is little or no politeness, the people in general being a kind of savages, envying the riches of others. " and tenacious of their own possessions?." it plainly appears, that the Scots at that time did not wish to renew the war with England, in the course of which their country had been almost ruined and depopulated. This made these French auxiliaries very unwelcome guests; and their own infolent rapacious behaviour did the rest. have even reason to suspect, that there never was any cordial friendship between the Scots and French; and that their common dread of the English was the only cement of their union.

Religion, and the characters of its ministers, Corrup-· have a confiderable influence on the manners of mankind in all ages. Their influence in this period was most pernicious. Nothing could be more corrupt, and unfriendly to virtue, than that fustem of Christianity that then prevailed in Britain, and all the nations of Europe, except the lives of the generality of its teachers. It is impossible to read without horror the descriptions given by Petrarch (who was himself a priest), of

the profligacy of the papal court in the fourteenth century, while it resided at Avignon. If there be any truth in these descriptions, of which we have no reason to doubt, that city was then the most odious unhallowed scene that ever the sun beheld. "You imagine (wrote he in a letter to a friend) " that the city of Avignon is the same now that " it was when you resided in it:-No; it is very " different.—It was then, it is true, the worst and es vilest place on earth; but it is now become a "terrestrial hell, a residence of siends and devils, " a receptacle of all that is most wicked and 66 abominable. What I tell you is not from hear-46 fay, but from my own knowledge and expe-46 rience. In this city there is no piety, no te-" verence or fear of God, no faith or charity, or nothing that is holy, just, equitable, or humane. Why should I speak of truth, where not only 46 the houses, palaces, courts, churches, and the "thrones of popes and cardinals, but the very er earth and air, seem to teem with lies. A fu-"ture state, heaven, hell, and judgment, are openly turned into ridicule, as childish fables. "Good men have of late been treated with for " much contempt and fcorn, that there is not " one left amongst them to be an object of their " laughter "." To confirm the truth of these and other reproaches no less severe, Petrarch relates feveral curious anecdotes of the diffimulation and debauchery of the cardinals, which

⁸ Fran. Petrarch. Frift. fine titulo, lib. 1. p. 7. 10, &c.

indelicate to be admitted into this work .

When the manners of popes, cardinals, court- Profigacy prelates, and their retainers, were fo corrupted, clergy. those of the clergy in general could not be pure; especially when (as we are assured by the same author) the more wicked any one was, the more certain he was of preferment in the church 10. Accordingly we find, that the vices of the clergy were the chief subjects of satire in every country in Europe, and particularly in England, in the fourteenth century. The poems of Chaucer abound in fuch fatire; and the Plowman's Tale is one continued invective against the clergy for their gross ignorance, cruelty, covetousnels, simony, vanity, pride, ambition, drunkenness, gluttony, lechery, and other vices; of which the following are a few examples:

Suche as can nat yfay ther crede, With prayer shul be made prelates; Nother canne thei the gospell rede, Suche shul now weldin hie estates.

Other vices.

The dissoluteness of the clergy in our present The times period was so conspicuous, that it gave rise to an of Antiopinion that univerfally prevailed, that the times lieved to of Antichrist were drawing near. "It is be- hand, te lieved by all wife men (says Roger Bacon), " that the times of Antichrist are near at hand 16." Dr. Nicholas Orem, a celebrated preacher, in a fermon before the pope and cardinals, A. D. 1364. proposed to prove that Antichrist would shortly make his appearance in the world, from the following figns of his approach.—1. The Christian church was become more corrupt than that of the

16 Bacon Opus Majus, p. 254.

· Jews

³⁵ Chaucer's Works, published by Urry, p. 279-189.

Jews was in the days of Christ, of which he gave many examples.—2. The great inequality in the state of the Christian clergy, " of whom some be " fo high that they exceed all princes of the " earth; fome again be fo base, that they are " under all rascals."-3. The pride of prelates, which doth excite indignation in many, and refpect only in few.—4. The intolerable tyranny of the governors of the church, which was fo violent that it could not be lasting.—5. the promoting the most vicious and unworthy in the church, and neglecting the most worthy.-6.' The princes and rulers of the church hate them that tell them truth, and refuse to hear their faults". Even Petrarch, though he doth not feem to have had any scruples about the doctrines and ceremonies of the church, was so much shocked at the gross corruption of manners in the papal court, that he applied the predictions in the book of the Revelations of St. John, relating to Babylon, the mother of harlots, and abominations of the earth, to the city of Avignon, which was then the residence of the pope and cardinals 18. At length Dr. John Wickliff in England, and several eminent persons in other parts of Europe, openly affirmed, that the pope was Antichrist; and that it was the duty of emperors, kings, princes, and nobles, to refume the lands and donations that had been granted to the church by their ancestors, for the support of

²⁷ Fox's Acts and Monuments, p. 383, &c.

Revelat. chap. 17. Pretrarehi Opera, edit. Bafil. p. 729.

the clergy; because they were possessed by Antichrist and his ministers 19.

This too general profligacy of the clergy could Profligacy not fail to have an ill effect on the manners of the clergycor. laity. For the clergy in those times possessing immense wealth and great power, had many followers and dependents, who were no doubt ready enough to imitate their example, to flatter them in their vices, and to minister to their pleasures. We have reason therefore to suspect, that the laity in general were not more virtuous than their teachers, though, from the difference of their circumstances, their vices were in some respects different. The cruel unnatural law of the celibacy of the clergy, for example, involved many of that body in various vices, to which the laity had not the fame temptations.

But though there is sufficient evidence that ra- Religion tional religion and real virtue did not greatly frongly tindured flourish among the people of Britain in the thir- with suteenth and fourteenth centuries, we must not imagine that the national virtues which prevailed in their ancestors were now quite extinct in their No! they still possessed the same kind of piety, strongly tinctured with superstition, and would have been no less liberal to the church than their forefathers, if they had not been restrained by laws, which they laboured to elude. A passion for holy wars, pilgrimages, relics, &c.

¹⁹ Hen. Knyghton, col. 2707. T. Walfing. p. 1911

[≈] Sec vol. 6. p. 333-342.

HISTORY OF BRITAIN. Book IV. was also very general, and esteemed one of the strongest evidences of eminent piety. Henry Spencer, the warlike bishop of Norwich, raised a great army in England, and conducted it to the continent, A.D. 1383, to support the election of pope Urban VI and put to death all the adherents of his antagonist Clement VII. The bulls of Urban, promising a plenary remission of their, fins, and a place in paradife to all who fought in his cause, or contributed money to support it, were the chief instruments employed to raise that army, and to collect money for its pay, and the other expences of that holy war 21. " As foon 46 (says the historian) as these bulls were pub-" lished in England, the whole people were trans-" ported with joy, and thought that the oppor-"tunity of obtaining fuch inestimable graces was " not to be neglected "." Pilgrimages were frequently and univerfally performed by perfons of all ranks; and those that were longest and most dangerous were believed to be most meritorious. That an excessive veneration for relics was no less universal, is evident from the following curious transaction, recorded by an eye-witness. Henry IXL. fummoned all the great men of the kingdom, A.D. 1247, to come to London on the festival of St. Edward, to receive an account of a certain facred benefit which heaven had lately bestowed on England. The fingular strain of this summons excited the most eager curiofity, and brought

a T. Walfing. p. 297.

great multitudes to London at the time appointed. When they were affembled in St. Paul's church, the king acquainted them, that the great master of the knights-templars had sent him, by one of his knights, a phial of crystal, containing a small portion of the precious blood of Christ, which he had shed upon the cross for the salvation of the world, attested to be genuine by the seals of the patriarch of Jerusalem, of several archbishops, bishops, abbots, and other great men of the Holy Land. This, he informed them, he defigned to carry the next day, in folemn procession, to Westminster, attended by them, and by all the clergy of London, in their proper habits, with their banners, crucifixes, and wax candles; and exhorted all who were present to prepare themselves for that facred folemnity, by spending the night in watching, fasting, and devout exercises. the morrow, when the procession was put in order, and ready to fet forward, the king approached the facred phial, with reverence, fear, and trembling, took it in both his hands, and holding it up higher than his face, proceeded under a canopy, two affistants supporting his Such was the devotion of Henry on this occasion, that though the road between St. Paul's and Westminster was very deep and miry, he kept his eyes constantly fixed on the phial, or on heaven. When the procession approached Westminster, it was met by about one hundred monks of that abbey, who conducted it into the church, where the king deposited the venerable relic, which

Bb 3

(fays

(fays the historian) made all England shine with glory, dedicating it to God and St. Edward, to the church of St. Peter's Westminster, and the monks of that abbey 24. An astonishing display of mistaken piety, or rather of the most sottish superstition and credulity!

Valour.

Courage and bravery may very fafely be reckoned among the national virtues of both' the British nations in this period; of which the history of their martial atchievements affords the clearest proofs. The two glorious victories of Cressy and Poictiers are incontestable evidences of the heroic valour of the English; and the obstinate invincible fortitude with which the Scots afferted the independency of their country, against the repeated efforts of their too powerful neighbours to subdue them, is a demonstration that they were then a brave and valiant people.

Generofity. A noble spirit of liberality and munisicence prevailed in this period, especially among the great martial barons; of which it may be proper to give one example; the lord James Audeley, one of the first knights of the garter, obtained permission from the prince of Wales to begin the battle of Poictiers; and, attended by his four faithful esquires, performed prodigies of valour. As soon as the action was over, and the victory complete, the prince inquired for the lord Audeley; and being informed that he lay dangerously wounded at a little distance, commanded,

²⁴ M. Paris, an. 1247, p. 493. col. 2.

if it could be done with fafety, to bring him to his tent. When lord Audeley, carried in a litter. entered, the prince embraced him in the most affectionate manner: declared, that he had been the best doer in arms in the business of that day; and made him a grant of five hundred marks yearly (equivalent to about 8,000 l. at present), as a reward of his valour. Lord Audeley accepted this noble grant with the warmest expressions of gratitude; but as foon as he was carried to his own tent, he bestowed it on his four brave and faithful esquires, without reserving any share of it to himfelf. The prince applauded this generous action, and rewarded it with another grant of fix hundred marks a-year 25. The generofity of those times was not always so wisely directed, but often degenerated into vain abfurd extravagance. ander III. king of Scotland, being present at the coronation of Edward I. rode to Westminster, attended by one hundred knights, mounted on fine horses, which they let loose, with all their furniture, as foon as they alighted, to be seized by the In this he was imipopulace as their property. tated by the earls of Lancaster, Cornwall, Glou, cester, Pembroke, and Warrenne, who each paid Edward the same expensive unprofitable compli-The extravagant ruinous liberalities of Henry III. and Edward II. are fo well known. that they need not be mentioned.

[#] H. Knyghton, col. 2461.

Hospita.

An almost unlimited hospitality reigned in the palaces of princes, and the castles of great barons, in the times we are now delineating. of fome of the kings of England in this period are faid to have been splendid and numerous, to a degree that is hardly credible, and of which no examples have been seen for several centuries. That of Richard II. is thus described by an historian of the greatest integrity: "His royalty 46 was fuch, that wherefoever he lay, his person " was guarded by two hundred Cheshiremen; he " had about him thirteen bishops, besides barons, "knights, esquires, and other moe than needed; 44 infomuch, that to the houshold came every day to meat ten thousand people, as appeared by the messes told out of the kitchen to three hun-"dred fervitors, &c.27? We may form fome idea of the magnificence and hospitality of the opulent and powerful barons of those times, from an account of the houshold-expences of Thomas earl of Lancaster for A. D. 131324. From that account it appears, that this great earl expended in house-keeping that year no less than 7,309 l. containing as much filver as 21,927 l. equal in efficacy to 109,635 l. of our money at present. The furprising cheapness of some of the articles in that account gives us reason to think, that it would even require a much greater fum than 109,635 l. to purchase an equal quantity of pro-

²⁷ Stow's Annals, p. 323.

Anderson's History of Commerce, an. 1313.

visions at this time. The pipe of French wine cost only 17 s. which, according to the above computation, was equivalent to 41. 5 s. of our money; a very inconfiderable part of its price at present. We may judge also of the grandeur and hospitality with which this earl lived, and of the immense quantities of provisions of all kinds that were confumed in his family in one year, from the quantity of wine, which was no less than three hundred and seventy-one pipes 29. Other earls and barons in general spent almost all their revenues, and the produce of their large domains, in hospitality at their castles in the country, which were ever open to strangers of condition, as well as to their own vassals, friends, and followers. This profuse expensive hospitality, it would seem, began to decline a little towards the conclusion of this period; and fome barons, instead of dining always in the great hall with their numerous dependents, according to ancient custom, dined fometimes in private parlours, with their own families, and a few familiar friends. But this innovation was very unpopular, and subjected those who adopted it to much reproach 30.

A splendid ostentatious kind of gallantry, ex-Romantic pressive of the most profound respect and highest gallantry. admiration of the beauty and virtue of the ladies, was studied and practised by the martial barons, knights, and esquires of this period. This gal-

²⁹ Anderson's History of Commerce, an. 1313.

³º Warton's Hift. of Poetry, vol. 1. p. 276.

lantry appeared in its greatest lustre at royal tournaments, and other grand and folemn festivals, at which the ladies shone in their brightest ornaments, and received peculiar honours. When Edward III. A, D. 1344, celebrated the magnificent feast of the round table, at Windsor, to which all the nobility of his own dominions, and of the neighbouring countries, had been invited, queen Philippa, and three hundred ladies, illustrious for their birth and beauty, uniformly dressed in the richest habits, adorned that solemnity, and were treated with the most pompous romantic testimonies of respect and admiration34. Many of the most magnificent tournaments of those times were the effects of this kind of gallantry, and were defigned for the honour and entertainment of the ladies, who appeared at these folemnities in prodigious numbers, and from different countries 22. Sometimes a few brave and gallant knights published a proclamation in their own, and in feveral other countries, afferting the fuperior beauty and virtue of the ladies whom they loved; and challenging all who dared to dispute that superiority, to meet them at a certain time and place to determine the important controverly by combat 23, These challenges were confrantly accepted, and produced tournaments, to which princes, knights, and ladies of different nations crowded. This romantic gallantry dif-

Ch. 7.

played itself in times of war, as well as peace, and amorous and youthful knights fought as much for the honour of their mistresses as of their country. A party of English and a party of French cavalry met near Cherburg A. D. 1379, and immediately prepared for battle. When they were on the point of engaging, fir Lancelot de Lorres, a French knight, cried aloud, that he had a more beautiful mistress than any of the English. This was denied by fir John Copeland, who run the Frenchman through the body with his spear, and laid him dead at his feet 34. When Edward III. raised a great army to affert his claim to the crown of France, a confiderable number of young English gentlemen put each of them a patch upon one of his eyes. making a folemn vow to his mistress, that he would not take it off till he had performed some notable exploit in France, to her honour; and these gentlemen (fays Froissart) were much admired 35.

The revival of chivalry by Edward I. and Ed- Chivalry. ward III. contributed not a little to promote valour, munificence, and this splendid kind of gallantry, among persons of condition, who aspired to the honours of knighthood, which were then objects of ambition to the greatest princes. ingenious writer, who had studied this subject with the greatest care, affirms positively, that " all the heroic virtues which then existed in the several ft states of christendom, were the fruits of chi-

³⁴ Froissart, tom. 2. p. 50.

³⁵ Id. tom. 1. ch. 29.

[&]quot; valry."

« valry 36." This affertion may be too strong; but it cannot be denied, that the spirit and the laws of chivalry were friendly to the cause of virtue, By these laws none but persons of unfullied characters could obtain the honours of knighthood, which were conferred with much folemnity, on the most public occasions, and in the presence of the most august assemblies. After the candidate had given sufficient proofs of his prowels, and other virtues, to merit that distinction, and had prepared himself for receiving it, by fasting, confessing, hearing masses, and other acts of devotion, he took an oath confisting of twenty-fix articles, in which, amongst other things, he swore, that he would be a good, brave, loyal, just, generous, and gentle knight, a champion of the church and clergy, a protector of the ladies, and a redreffer of the wrongs of widows and orphans 37. Those knights who acquitted themselves of these obligations in an honourable manner, were favoured by the fair and courted by the great; but those who were guilty of base dishonourable actions, were degraded with every possible mark of infamy. this could hardly fail to have some influence on the conduct of those who were invested with that dignity; though, from the rudeness of the times, and the general diffolution of manners which then prevailed, that influence was probably much less than might have been expected.

³⁶ M. de la Curne De Sainte Palaye, fur l'Ancienne Chevalrie, tom. 1. p. 215.
37 Id. ibid. part 2. p. 67—180.

Chivalry declined in England during the inglo- Revived in rious reigns of king John and Henry III. but revived under Edward I. That prince was one of the most accomplished knights of the age in which. he flourished, and both delighted and excelled in feats of chivalry. It is fufficient proof of this, that when he was on his return from the Holy Land, after his father's death, and knew that his presence was ardently defired in England, he accepted an invitation to a tournament at Chalons in Burgundy. At that famous tournament, which terminated in a real battle, he displayed his valour and dexterity to great advantage, and gained a complete victory 32. Edward III. was no less fond of chivalry, and encouraged it both by his example and munificence. In this he was influenced by policy, as well as inclination. Having formed the defign of afferting his claim to the crown of France, he laboured to inspire his own subjects with a bold enterprising spirit, and to entice as many valiant foreigners as possible into his service. With this view he celebrated feveral pompous tournaments, to which he invited all strangers who delighted in feats of arms, entertained them with the most flow-. ing hospitality, and loaded such of them as excelled in these martial sports with honours and rewards, in order to attach them to his person and engage them to fight in his cause 39. With the same view, and about the same time, he founded

³⁸ Mat. Westminster, 1. 2. p. 354. Annal Nu Trivite, ad ann. 2278. S Froillatt, tom. 1. ch. 90. 101.

the most honourable order of the garter; of which his own heroic fon the black prince was the first knight, and all the first companions were persons famous for their victories at tournaments, and in real wars 40. Philip de Valois, king of France, was fo much alarmed at these proceedings of his powerful rival, that he set up a round table at Paris, in opposition to that at Windsor, and endeavoured to render his tournaments more splendid than those of Edward, in order to attract a greater number of foreign knights, that he might retain them in his fervice4. In a word, chivalry, which is now an object of ridicule, was, in those times, a matter of the greatest moment, and had no little influence on the manners of mankind and the fate of nations.

Follies and vices.

It is unnecessary to give a long detail of the national foibles and vices of the people of Britain in the present period, as they were nearly the same with those of their ancestors in that immediately preceding 42. A most absurd irrational credulity still reigned in all the nations of Europe, not only among the vulgar, but among persons of the highest rank and best education. Pope Innocent VI. sirmly believed that Petrarch was a magician, because he read Virgil 43. Many miracles were reported and believed to be wrought in different places, on the most trisling occasions, and are

recorded

⁴⁰ See the Lives of the founder, and of all the first knights, in Ashmole's History of the Garter, chap. 26.

⁴¹ T. Walfing p. 164. 42 See vol. 6. p. 342-350.

⁴³ Petrarchi Opera, Basil. edit. p. 739.

recorded by our gravest historians as unquestionable facts 44. No prince engaged in any undertaking of importance till his astrologers had confulted the stars, and discovered the auspicious moment for carrying it into execution. Of this we meet with a very curious example, in the account given by Matthew Paris of the marriage of Frederic emperor of Germany, and Isabella, sister of Henry III. A. D. 1235 45.

The administration of justice, even in the king's Justice ill courts, was very corrupt and oppressive in this nistered. period. This was partly owing to the venality of the judges, and partly to unlawful confederacies among the subjects, to support each other in their law-fuits. The venality of the king's ministers of justice at length became so intolerable and notorious, that they were tried by a parliament held at Westminster A. D. 1280, found guilty, and fined according to the degrees of their delinquencies. Sir Adam de Stratton, chief baron of the exchequer, was fined in no less than 34,000 marks, equivalent to 340,000l. of our money at present; and this, with the fines of the other judges, amounted to a fum equivalent to one million in our times 46. Sir Thomas Weyland, chief justice of the common pleas, having been found guilty of

⁴⁵ Nocte vero prima qua concubuit Imperator cum ea, noluit eam carnaliter cognoscere, donec competens hora ab astrologis ei nunciaretur. M. Paris, p. 285. ad. an. 1235.

⁴⁵ T. Wykes, Chron. ann. 1289.

exciting some of his followers to commit a murder, and of protecting them after they had committed it, was condemned to be hanged; but the king, in confideration that he was a knight (a character which Edward I. much revered), spared his life, banishing him out of the kingdom, and confiscated his whole estate ". But all this severity doth not feem to have put an end to this evil: for we meet with very loud complaints of the corruption of the judges long after this time. The monk of Malmsbury, A. D. 1319, assures us, that there was not so much as one of the king's ministers and judges who did not receive bribes, and very few who did not extort them 4. The eight statutes made in this period against champerty, as it was called, or forming confederacies for supporting each other in all quarrels and law-fuits, affords fufficient evidence, that this evil very much prevailed, and was very hard to be eradicated ...

Robbery prevailed. Robbery was the reigning vice, not only in Britain, but in all the nations of Europe, in the present period; and robbers were then more numerous, cruel, and destructive, than at any other time. These pests of human society were frequently formed into companies, under the protection of powerful barons, who sheltered them in their castles, and shared with them in their booty.

⁴⁷ Annal. Dunitap. an. 1289.

⁴⁸ Monach. Malmf. ad an. 1319.

⁴⁹ Statutes at Large, 1st Ed. I. ch. 25.; 13th Ed. I. ch. 49.; 38th Ed. I. ch. 2.; 33d Ed. I. ch. 2.; 1st Ed III. ch. 14.; 4th Ed. III. ch. 2.; 1st Rich. II. ch. 2.; 7th Rich. II. ch. 7.

During the feeble reign of Henry III. many strong castles belonging to great men were no better than dens of thieves and robbers, who from thence infested the whole country. In Hampshire their numbers were fo great, that the judges could not prevail upon any jury to find any of them guilty; and the king himself complained, that when he travelled through that county, they plundered his baggage, drunk his wine, and treated him with contempt. It was afterwards discovered, that feveral members of the king's household were in confederacy with the robbers 50. Even under the more vigorous administration of Edward I. a numerous band of robbers affaulted the town of Boston, A. D. 1285, in the time of the fair, set it on fire in three places, and carried off an immense booty in money and goods. Their leader Robert Chamberlan, a gentleman of great power and wealth, was taken, tried, and executed; but he could not be prevailed upon to discover so much as one of his accomplices 52. The robbers of those times plundered all who came in their way without distinction. A troop of them, commanded by Gilbert Middleton and Walter Selby, assaulted two Cardinals, who were escorted by the bishop of Durham and his brother lord Beaumont, attended by a numerous retinue of gentlemen and fervants near Darlington, A.D. 1316. Having robbed the cardinals of their money and effects, they

Book IV.

allowed them to proceed on their journey; but they carried the bishop and his brother prisoners, the one to the castle of Morpeth, and the other to the castle of Mitsord, and there detained them till they had paid their ransoms. Peter king of Cyprus and Jerusalem, who visited England A. D. 1363, was robbed on the highway, and stripped of his money and baggage. As the robbers of this period were very numerous, so some of them were very cruel; and the character which one of their chiefs wore embroidered upon his coat in letters of silver, might have been applied to several others,—
"I am Captain Warner, commander of a troop of robbers, an enemy to God, without pity and without mercy "."

Miserable frate of common people.

When those audacious plunderers dared to rob kings, cardinals, bishops, and lords, and even to pillage populous towns, we may presume, that they were very terrible to ordinary travellers, and the inhabitants of the open country. That they really were so, we learn from the historians of those times, who assure us, that travelling was very dangerous, and that the people in the country lived under continual apprehensions of being plundered. Besides this, many other things conspired to render the condition of the great body of the people of Britain, in this.

period, uncomfortable and unhappy. They were almost necessarily condemned to live in ignorance, and had hardly any means of acquiring either civil or religious knowledge. Religious liberty was quite unknown; and the clergy enflaved the minds of the laity, as well as preyed upon their fortunes, in many different ways. The common people, and even those in the middle ranks of life, enjoyed but a very small share of civil liberty; and all the protection they received from law and government was frequently infufficient to defend them from the oppression of the too powerful barons, who were many of them petty tyrants. The long bloody and destructive wars between England and Scotland, and England and France, involved the people of all these countries in very great calamities. The wars between England and Scotland were carried on with uncommon animosity; and in the course of them much of the best blood in Britain was spilt, many populous towns and villages were reduced to ashes, and the borders of both kingdoms were almost desolated. The devaltations of war, and the imperfection of agriculture, occasioned frequent famines, in which many of the common people perished 36. Some of these famines were so severe, that many mothers, it is faid, committed the most unnatural acts of cruelty to prolong their miserable lives 57. Some of these

⁵⁶ M. Paris, p. 652, 653, 655. Monach. Malmf. an. 1316. p. 166. T. Walfing. p. 54. 63. 108. Knyghton. col. 2435, 2436. 2444. 2502. 2737. 57 T. Walfing. p. 108.

famines were followed, by epidemical diseases, or rather plagues, which swept off still greater multitudes. "This year, A.D. 1316 (fays Walfing-" ham), the famine gradually increased; and about " the beginning of August a quarter of wheat sold " at London for forty shillings (equivalent to 301. e of our money at present.) The famine was 66 followed by fo great a mortality, especially " among the poor, that the living were hardly " able to bury the dead. For a dysentery, accom-" panied by an acute fever, occasioned by un-46 wholesome food, became universal, and very " foon proved mortal "." The dreadful pestilence which raged over all Britain A. D. 1349, was still, if possible, more destructive. The accounts given of the ravages of this plague, by the best contemporary historians, are hardly credible, some affirming, that it carried off one half, and others a much greater proportion of the whole people 39. When all these circumstances are considered, sew will be disposed to envy the happiness of their ancestors who flourished in the thirteenth and fourteenth. centuries, or to think that those times were better than the present.

Language.

A kind of confusion of tongues prevailed in England for several centuries after the Norman conquest, when the different orders of the people made use of different languages. This was so much the case, even in the sormer part of the sourteenth

century,

⁵³ T. Walfing. p. 108.

⁵⁹ Id. p. 168. Knyghton, col. 2598, 2599, 2600.

century, that public speakers were sometimes obliged to pronounce the same discourse three times to the same audience, once in Latin, once in French, and once in English 60.

Latin was the language of the church, of the Latin. schools, of the courts of justice, and in general of the learned of all professions, who frequently conversed and corresponded with one another in that tongue. Divines, philosophers, historians, and even poets, composed the far greatest part of their works in Latin, especially before the middle of the fourteenth century. All acts of parliament to A.D. 1266, and many of them long after, were in that language. It was not till A.D. 1258, that the Great Charter itself was translated into English, and read to the people in their mother-tongue 63. To the very end of this period the royal proclamations were for the most part in Latin, a language which was understood by none of the common people, and by very few of the nobility of gentry 62. But it is very probable that these proclamations were translated or explained to the people when they were published.

The Norman or French was the language of French. the court of England, of the nobility, and of all who wished to be thought persons of rank and fashion, for about three centuries after the con-

⁶⁰ Wilkin. Concilia, tom. 2. p. 333. col. 2.

⁶¹ Annal. Dunftap. p. 336. ad an. 1258.

⁶² See Rym. Fæd. from vol. 1. to 9.

quest. To the truth of this we could produce the testimony of several unexceptionable witnesses; but that of Ralph Higden, author of the Polieronicon, and his translator John de Trevisa, who flourished under Edward III. and Richard II. will be sufficient: "Gentilmen's children ben lerned " and taught from theyr youthe to fpeke Frenshe. " And uplondish men will counterfete and liken " himself to gentilmen, and arn befy to speke "Frenshe, for to be more sette by; wherefore " it is fayd by comyn proverbe, Jack wold be a " gentilman if he coude speke Frenshe." To this, Trevifa the translator adds, "This mannar " was moche used tofore the great deth (1349), " but fyth it is somedele chaunged 63." The following curious and well-attested fact seems to indicate that Edward I. and his nobility did not very well understand either Latin or English. Pope Boniface VIII. having issued a bull, A. D. 1300, commanding Edward I. in a very imperious tone, to defist from troubling the kingdom of Scotland, and to refer all his disputes with the people of that kingdom to his holiness, he sent it to the archbishop of Canterbury, with a mandate to deliver it to the king. The archbishop wrote a letter to the pope, in answer to that mandate. acquainting him, that he had taken a very long and fatiguing journey into Scotland, and had found the king in his camp near New-Abbey, in Galloway, who fummoned a great council of his no-

⁶³ Trevifa's Translation of Higden, lib. 1. fol. 55.

bility to hear his message; that he received the bull with great reverence, commanded it to be read aloud before the council (which confisted of prince Edward and all the earls, barons, and knights of the army), and afterwards ordered it to be fully explained in the French language 64.

Anglo-Saxon or English was the language of Anglothe great body of the people of England. This language they derived from their ancestors the Anglo-Saxons, and retained with great steadiness, in spite of all the efforts of the Conqueror and his fuccessors to substitute the Norman in its place. It even gradually gained ground, and in the course of this period forced its way into the courts of justice, from which it had been excluded almost three hundred years. An act, of parliament was made, A. D. 1362,—that all pleadings in all courts both of the king and of inferior lords, should be in the English tongue, because French was now much unknown in the realm, and that the people might know fomething of the laws, and understand what was faid for and against them. 65. But this victory was far from being complete; for that very act of parliament was, and many others long after were, in French; a fufficient proof that persons in the higher ranks of life still retained a predilection for that language.

⁶⁴ Wilkin. Concil. tom. 2. p. 262.

⁶⁵ Statutes at Large, A.D. 1362. ch. 15.

Anglo-Saxon pure. The Anglo-Saxon that was spoken in England about two hundred years after the conquest, was surprisingly pure, with very little mixture of Latin, French, or any other language. Of this the reader will be convinced, by perusing the specimen of that language which he will find in the Appendix, with a translation into modern English words interlined 65.

English.

In the course of the fourteenth century, the Anglo-Saxon gradually changed into what may be called English. This was owing to various That animofity which had long subfisted between the posterity of the Normans and of the Anglo-Saxons, was now extinguished, and they were in a great measure consolidated into one people, by intermarriages and other means. of the Normans who were engaged in agriculture, trade, and manufactures, though they had been raught French by their parents in their youth, found it necessary to speak the language of the multitude, into which they introduced many French words and idioms to which they had been accustomed. Besides this, Chaucer, Gower, Wickliff, and feveral others, composed voluminous works, both of prose and verse, in English; and being men of learning, well acquainted with French and Latin, and some of them with Greek and Italian, they borrowed many words and idioms from those languages, with which they

adorned and enriched their own. By these means, the Anglo-Saxon tongue was greatly changed before the end of this period, and the language of the best writers approached much nearer to modern English than that of Robert of Gloucester, and others who flourished in the thirteenth century,

It must, however, be confessed, that the Enghish of the fourteenth century was still so different from mofrom that of the eighteenth, that a mere English reader cannot always understand it without a glosfary. The mode of spelling was unsettled, and very different from the modern. In general, they delighted much in vowels, and avoided the multiplication of confonants more carefully than we do at present. Many words were then in common use, and perfectly well understood, which are now become obsolete, and consequently unintelligible to the bulk of readers. The meaning of several words was very different then from what it is at present. A knave, for example, sometimes fignified a male in opposition to a female: The time is come, and a knave child she 66 bare 67. " but most frequently a servant, in opposition to a freeman. Its modern meaning is well known. The poets of those times used extraordinary freedoms (which would not be now allowed) in shortening, lengthening, dividing, uniting, and changing words to fit them for their purposes; which renders their language

Very dif-

∮7 Chaucer, p. 50.

obscure

obscure and difficult to a modern reader. The above observations might have been confirmed and illustrated by examples; but that would have been tedious, and too minute for general history. The truth of them is well known to all who are in the least acquainted with the authors of those times.

Different dialects.

Various dialects and different modes of pronouncing the English of this period prevailed in different districts: "Hit semeth a grete wonder "that Englyssmen have so grete dyversyte in theyr owin langage in sowne and in spekyin of it, which is all in one ilonde "." If we may form a judgment of these modes of pronunciation from the words used by a contemporary writer in describing them, they were harsh enough: "Some use straunge wlassing, chytryng, "harring, garryng, and grysbyting.—The langages of the Northumbres, and specyally at "Yorke, is so sharpe, slytting, frotyng, and un- shape, that we sothern men maye unneth un- derstande that langage"."

Drefs.

The extravagancies of dress and follies of fashion have been subjects of complaint and satire in every age, and in none more justly than the period we are now delineating. In the remaining monuments of those times, we meet with many descriptions of the splendid expensive dresses of the great, and many complaints of the ridiculous, deforming, inconvenient fashions adopted by per-

fons of all ranks. The magnificent costly dresses of the barons and knights who attended the marriage of Alexander III. king of Scotland, and Margaret, eldest daughter of Henry III. at York, A. D. 1251, are thus mentioned by Matthew Paris, who was prefent at that folemnity: " The " royal marriage was folemnized privately, and very early in the morning, to avoid being in-" commoded by the multitudes of nobles of Eng-4 land, France, Scotland, and other countries, " who were then in York, and ardently defired 66 to fee it. It would raife the furprife and inse dignation of my readers to the highest pitch, 46 if I attempted to describe at full length the wantonness, pride, and vanity, which the no-66 bles displayed on this occasion, in the richness " and variety of their dresses, and the many fan-46 tastical ornaments with which they were adorned. "To mention only one particular:—The king of England was attended on the day of the " marriage by a thousand knights, uniformly "dressed in filk robes, which we call cointoises; 44 and the next day these knights appeared in new "dresses, no less splendid and expensive "." This taste for too great expence in dress was not peculiar to the great, but infected all the different ranks in fociety. For though there might be fome exaggeration, there was certainly also some truth, in the passage already quoted from the monk of Malmibury, in his life of Edward II.

the squire endeavours to outshine the knight, the knight the baron, the baron the earl, the earl the king, in dress "." The clergy were no less vain and extravagant in their dress than the laity.

They hie on horse willeth to ride, In glitterande golde of grete arai, Painted and portrid all in pride, No common knight maie go so gaie; Chaunge of clothing every daie, With golden girdels grete and small.—

Miters thei werin mo than two,
Iperlid as the quen'is hedde,
A staff of gold, and pirrie lo!
As hewic as it were made of ledde,
With clothe of golde both newe and redde 72.

This humour increased remarkably in the reign "In this year, 1348 (writes an of Edward III. annalist of those times), England enjoyed great " prosperity, plenty, and tranquillity, in consequence of her many victories. Such quantities " of furred garments, fine linens, jewels, gold " and filver plate, rich furniture and utenfils, the " spoils of Caen, Calais, and other foreign cities, were imported, that every woman of rank obes tained a share of them, and they were seen in every mansion. Then the ladies of England " became proud and vain in their attire, and were " as much elated by the acquisition of all that if finery as the ladies of France were dejected by " the loss of it "."

⁷¹ Mon. Malmf. p. 153. 73 T. Walfing. p. 168.

⁷² Chaucer's Works, p. 179.

At length the legislature found it necessary to Regulated interpole, by making fumptuary laws, for regulating the dress of all ranks of people, in a parliament held at Westminster A.D. 1363. In the preamble to these laws they are said to have been made,—" to prevent that destruction and poverty with which the whole kingdom was threatened, by the outrageous excessive expences of many ee persons in their apparel, above their ranks and cs fortunes 74."

But these laws feem to have had little or no effect. In the reign of Richard II. extravagance in little dress became greater, and more universal, than it had ever been in any former period. "At this time (1388) the vanity of the common people " in their dress was so great, that it was imof possible to distinguish the rich from the poor, the high from the low, the clergy from the 46 laity, by their appearance. Fashions were con-44 tinually changing, and every one endeavoured "to outshine his neighbour by the richness of his "dress or the novelty of its form "5." was partly owing to the example of the king, who was exceedingly fond of pomp, and so expensive in his dress, that he had one coat which cost him thirty thousand marks 76: an immense fum in those times. The king was imitated by his courtiers, and fome of them even exceeded him in the splendour and variety of their dresses.

⁷⁴ Statutes at Large, tom. 1. p. 315. 75 Knyghton, col. 2729. 76 Holing, Chron. p. 1110.

198

Sir John Arundel, it is faid, had no fewer than fifty-two complete fuits of cloth of gold 77. This extravagance descended from one rank to another till it reached the very lowest of the people.

Fashions.

The writers of this period complain as much of the fathions as of the too great expense of drefs. These fashions frequently changed; and some of them appear to have been very fantastical, inconvenient, and indecent. "The Englishmen 46 haunted fo moche unto the foyle of strawngers, that every vire thei chawnged them in divirfe 44 schappes and disgistinggs of clothingge; now 44 longe, now large, now wide, now straite; and every day clothingges newe, and destitute and 46 difirte from alle honeste off old array, and se gode usage; and another tyme to schorte " clothes and streite waisted, with full slives, and tapetis of curtotes, and hodes over longge 46 and large, alle to nagged and knet on every se fide, and alle to flatteredde, and also botteee nedde, that iff I weth shall sey, they weren more lyke to turmentours and deviles in their " clothingge, and also in their schoying (shoeing), 44 and other aray, than they femed to be lyke e men. And thette the wemmenne weren more " nycely arraiedde, and passed the menne in alle " maner of araies and curious clothing 78." Geoffrey Chaucer's account of the dreffes of his age is not more favourable. "Alas! may not a man

⁷⁷ Holing, Chron. p. 1015.

⁷⁸ Douglas, Monk of Glastenbury, apud Strutt, vol. 2. p. 23.

[&]quot; fi as

" si as in our daies the sinnefull costlewe arraie of " clothing, and namely in to moche superfluite, " or else in to disordinate scantinesse? As to the " first,-Superfluite in clothing, that maketh it of fo dire, to the harme of the peple, not only " the cost of embrowdering, the disguised in-" denting or barring, ounding, paling, winding " or binding and femblable wast of clothe, " vanite: but there is also the costlewe furring in ther gounes, so much pouncing of chesel to " make holes, fo moche dagging with shires " foorth, with the fuperfluite in length of the " forfaied gounes, trailing in the dong and in the " mire, on horse and also on fote, as well of " man as of woman. --- Upon that other fide, to speke of the horrible disordinate scantness of " clothing, as ben these cuttid sloppes or hand-" felines (breeches), that through ther shortness " cover not the shamefull members of manne, "to wicked intent. Alas! some of hem skewe " the boffe of ther shape, and the horrible swole " members, in the wrapping of ther hofen, and " also the buttokes of them, as farre as it were " the hinder parte of a she ape in the full of the mone.—Now as to the outragious aray of " women, God wote, that though the visages of " fome of hem seme full chaste and debonaire, " yet notify in ther aray or attire licorousness and " pride 79." Some other parts of this description are too indelicate to be admitted into this

406

work. Petrarch expressed his disapprobation of the dreffes of his time in still stronger terms, in a letter to the pope, A.D. 1366: " " can see with patience the monstrous fantastical " fashions which the people of our times have iner vented to deform, rather than adorn, their of persons? Who can behold without indignation "their long-pointed shoes;—their caps with fea-" thers;-their hair twisted, and hanging down " like tails;—the foreheads of young men, as " well as women, formed into a kind of furrows " with ivory headed pins 1—their bellies fo cruelly " squeezed with cords, that they suffer as much " pain from vanity, as the martyrs fuffered for " religion; -- and especially those indecent parts " of their dress which are extremely offensive to every modest eye? Our ancestors would not " have believed, and I know not if our posterity " will believe, that it was possible for the wit of " this vain generation of ours to invent so many " base, barbarous, horrid, ridiculous fashions (be-" fides those already mentioned), to disfigure and disgrace itself, as we have the mortification to " fee every day "."

Longpointed thoes. These strictures on the dresses of this period (to which others might be added) are indeed severe; but a slight attention to a few of the inconvenient, ridiculous, indecent modes which then prevailed, will convince us that they were not unjust. What could be more inconvenient than

80 Opera Petrarchi, edit. Basil. p. 812.

their

their long-pointed shoes, with which they could not walk till they were fastened to their knees with chains 37? The upper parts of these shoes were cut in imitation of a church window. Chaucer's spruce parish-clerk Absolom.

Had Paul 'is windowes corven on his shose 82.

These shoes were called crackowes: and continued in fashion about three centuries, in spite of the bulls of popes, the decrees of councils, and the declamations of the clergy against them.

What could exhibit a more fantastical appearance than an English beau of the fourteenth cention of a tury? He wore long-pointed shoes, fastened to his knees by gold or filver chains; hose of one colour on one leg, and of another colour on the other; short breeches, which did not reach to the middle of his thighs, and disclosed the shape of all the parts included in them; a coat, one half white, and the other half black or blue; a long beard; a filk hood buttoned under his chin, embroidered with grotesque figures of animals, dancing men, &c. and fometimes ornamented with gold, filver, and precious stones 33. This dress, which was the very top of the mode in the reign of Edward III. appeared fo ridiculous to the Scots (who probably could not afford to be fuch egregious fops) that they made the following fatirical verses upon it.

the fourteenthcentury.

Long beirds hirtiless, Peynted whoods whitles, Gay eotes gracelies, Maketh Englond thriftelies.

Pemale drefs.

The dress of the gay and fashionable ladies who frequented the public diversions of those times was not more decent or becoming. It is thus described by Knyghton, A.D. 1348: "These " tournaments are attended by many ladies of the " first rank and greatest beauty, but not always of "the most untainted reputation. These ladies " are dreffed in party-coloured tunics, one half " being of one colour, and the other half of ano-"ther; their lirripipes or tippets are very short; " their caps remarkably little, and wrapt about "their heads with cords; their girdles and pouches " are ornamented with gold and filver; and they " wear short swords, called daggers, before them, " a little below their navels: they are mounted "on the finest horses, with the richest furniture. "Thus equipped, they ride from place to place, " in quest of tournaments, by which they diffior pate their fortunes, and fometimes ruin their " reputations 84." The head-dreffes of the ladies underwent many changes in the course of this They were fometimes enormously high, rifing almost three feet above the head, in the shape of sugar-loaves, with streamers of fine filk flowing from the top of them to the ground *5.

Upon

⁸⁴ Knyghton, col. 2597.

⁸⁵ Montfaucon Monumens de la Monarchie Françoise, tom. 1. p. 234. 256.

Upon the whole, I am fully perfuaded, that we have no good reason to pay any compliments to our ancestors of this period, at the expence of our contemporaries, either for the frugality, elegance, or decency, of their dress.

The common people in Wales (where the arts had made little progress) were very imperfectly clothed in this period. The Welshmen in the army of Edward II. were known, in their flight from the battle of Bannockburn, by the meanness of their dress.

Drefs of the Welsh.

Sir Maurice also, the Barclay,
Fra the great battle held his way,
With a great rout of Walishmen,
Where'er they yied men might them ken;
For they well near all naked were,
Or linen clothis had but mare 56.4

We have no reason to suppose, that the common people in the highlands of Scotland (where the arts were as imperfect as in Wales) were better clothed than the Welsh. The Scots in the low country imitated the dress and fashions of the French and English, as their circumstances and knowledge of the arts permitted. Matthew Paris, who was present at the splendid marriage of Alexander III. with the princess Margaret of England, at York, A. D. 1251, acquaints us, that about sixty barons and knights, and many other gentlemen, who attended the young king of Scotland on that occasion, were elegantly dressed.

1 he

Diet.

The people of England, in this period, were not more moderate in their diet than in their dress: and the interposition of government was thought necessary to restrain them from excesses in the one as well as in the other. Edward H. issued a proclamation on this subject, A. D. 1216. to the following purpose: " Edward, by the grace of 66 God, king of England, lord of Ireland, and " duke of Aquitaine, to the sheriffs of London, wisheth health. Whereas, by the outrageous " and excessive multitude of meats and dishes " which the great men of our kingdom have " used, and still use, in their castles, and by es persons of inferior rank imitating their ex-" ample, beyond what their stations require, and their circumstances can afford, many great evils " have come upon our kingdom, the health of " our fubjects hath been injured, their goods have " been confumed, and they have been reduced to es poverty: we being willing to put a stop to or these excesses, have, with the advice and con-" fent of our council, made the following rules " and ordinances,-Imo, That the great men of " our kingdom shall have only two courses of " flesh meats ferved up to their tables, each " course confishing only of two kinds of flesh " meat, except prelates, earls, barons, and the " greatest men of the land, who may have an " intermeat of one kind, if they please. On 46 fish days, they shall have only two courses of " fish, each consisting of two kinds, with an intermeat of one kind, if they please. Such as " transgress

ec transgress this ordinance shall be severely puse nished so." This proclamation was issued in the time of a deplorable famine, and we may conclude, that, if the prelates and barons indulged themselves in so great a number and variety of dishes at their tables, when the poor were perishing for want around them, they would be still more profuse in times of plenty so. In the reign of Edward III. A. D. 1363, several sumptuary laws were made for regulating the dress and diet of persons of different ranks; and in particular, it was enacted, that the servants of gentlemen, merchants, and artificers, should have only one meal of flesh or fish in the day, and that their other meal should consist of milk, butter, cheese, and such other things as were suitable to their station . But a contemporary historian affures us that these laws had no effect, though a severe famine raged at that time?

The feasts in this period, at the coronation of kings, the installation of prelates, the marriages of great barons, and on some other occasions, were exceedingly profuse, the numbers of dishes served up, and of guests entertained, sometimes amounting to many thousands. The coronation-feast of Edward III. cost 28351. 18s. 2d. equivalent to about 40,000 l. of our money exceedingly. At the installation of Ralph abbot of St. Augustine, Can-

⁸⁸ Ryley's Pleadings in Parliament, p. 552.

terbury, A. D. 1309, fix thousand guests were eatertained with a dinner, confisting of three thoufand dishes, which cost 2871. 58. od. equal in efficacy to 4300 l. in our times 93. "It would 66 require a long treatife (fays Matthew Paris) to " describe the astonishing splendour, magnificence, and festivity with which the nuptials of 66 Richard earl of Cornwall, and Cincia daughter " of Reimund earl of Provence, were celebrated " at London A.D. 1243. To give the reader "fome idea of it, in a few words, above thirty 46 thousand dishes were served up at the marriage-"dinner"." The nuptials of Alexander III. of Scotland, and the princess Margaret of England, were folemnized at York, A.D. 1251, with still greater pomp and profusion. " If I attempted " (says the same historian) to display all the gran-66 deur of this folemnity,—the numbers of the " noble and illustrious guests,—the richness and 46 variety of the dreffes, the sumptuousness of the feasts,—the multitudes of the minstrels, " mimics, and others whose business it was to " amuse and divert the company, those of my " readers who were not prefent would imagine that I was imposing upon their credulity. The " following particular will enable them to form " a judgment of the whole. The archbishop of "York made the king of England a present of " fixty fat oxen, which made only one article of

⁹³ Chron. W. Thorn, col. 2010.

⁹⁴ M. Paris, p. 411.

[&]quot; provision

or provision for the marriage-feast, and were all confumed at that entertainment "."

The art of cookery was as much cultivated, and Cookery. as much improved, in this period, as any of the other arts. The cook in the Canterbury Tales was no mean proficient in his profession:

A coke thei hadde with them for the nones, To boyle the chikeus and the marie-bones, And pouder marchaunt, tarte, and galengale: Well couth he know a draught of London ale. He couth rostè, boilè, grillè, and frie, And make mortries, and well bake a pie, For blank-manger that made he with the best ...

Chaucer, in the Parson's Tale, complains of the too laboured and artificial cookery of those times: " Pride of the table apereth also full ofte: " for certes riche men be called to festes, and 44 pore folke ben put away and rebuked. And 46 also in excess of divers metes and drinkes; and namely, fuch maner bake metes and dishe er metes brenning of wild fire, peynted and car felled with paper and famblable waste, so that it 46 is abufion to think 97.24

One of the most expensive fingularities attend- Intering the royal feasts in this period confisted in what meating they called intermeats. These were representations of battles, fieges, &c. introduced between the courses, for the amusement of the guests. The French excelled in exhibitions of this kind,

95 M. Paris, p. 555. 6 Chaucer's Works, p. 4. 97 Id. p. 198.

At a dinner given by Charles V. of France to the emperor Charles IV. A. D. 1378, the following intermeat was exhibited. A ship with masts, sails, and rigging, was feen first; she had for colours the arms of the city of Jerusalem: Godfrey de-Bouillon appeared upon deck, accompanied by feveral knights armed cap-a-pee: the ship advanced into the middle of the hall, without the machine which moved it being perceptible. the city of Jerusalem appeared, with all its towers lined with Saracens. The Ship approached the city; the Christians landed, and began the assault; the besieged made a good defence: several scalingladders were thrown down; but at length the city was taken 32. Intermeats at ordinary banquets confisted of certain delicate dishes, introduced between the courses, and designed rather for gratifying the taste than for satisfying hunger 99.

Drinks.

Persons of rank and fortune, in this period, indulged themselves in a very liberal use of a variety of liquors. Ale and cyder were the most common drinks of the people of England 100. But besides these, great quantities of wines of various kinds were imported. The following lines of a poet who wrote in this period contain an ample enumeration of the wines then known and used in England:

Ye shall have rumney and malespine, Both ypocrasse and vernage wyne;

⁹⁸ Essays on Paris, vol. 2. p. 71.

⁹⁹ Ryley s Placita Parliamentaria, p. 552.

³⁰⁰ Opera Petrarchi, tom. 3. p. 3.

Mountrese and wyne of Greke, Both algrade and despice eke, Antioche and bastarde, Pyment also, and garnarde, Wine of Greke and Muscadell, Both clare, pyment, and rochell 101,

Some of these liquors, as ypocrass, pyment, and claret, were compounded of wine, honey, and spices of different kinds, and in different propor-These were considered as delicacies, and were chiefly used by persons of the highest rank. This appears from the following precepts of Henry III: "We hereby command you, the keepers of our wines at Winchester, to deliver to Robert de Monte Pessulano, such wines, and se in fuch quantities, as he shall require, of our wines in your custody, to make delicate and 4 precious drinks for our own use. Witness, the " king, at Lutegareshall, 26th November 1250." The other precept contains a more particular description of these delicate drinks: "We hereby " command you, the keepers of our wines at "York, that of the best wines in your custody, 46 you deliver to Robert de Monte Pessulano two " tons of white wine to make garhiofilac, and one " ton of red wine to make claret for our own " use at the approaching feast of Christmas. We se command also the faid Robert to go with all " speed to York, to make the said garhiofilac

¹⁰² Warton's Hist. Poet. vol. 1. p. 177.

44 and claret, as he used to do in former 45 years 102.29

In our present period, people of all ranks made only two stated meals a-day, dinner and supper, the former in the forenoon, the latter in the evening. When Henry duke of Lancaster took Richard II. prisoner in Flint castle, on the morning of August 20, A. D. 1399, he asked the king, Hath your majesty broke your fast? To which Richard answered, I have not? for it is too early in the morning. The duke then said, I entreat you to dine immediately; for you have a long journey to go: and the king, after some hesitation, commanded the table to be covered, and made a short dinner 103. These two meals, and the times at which they were taken, are mentioned in the sol-lowing lines of Chaucer:

For every day, when Beryn rose, unwash he wold dyne, And draw hym to his seleship, as even as a lyne, And then come home, and ete and soop, and selepe at nyht 10+.

The wines.

Kings, princes, and other persons of high rank and great fortunes, commonly took a kind of collation immediately before they went to bed, called the wines, consisting of delicate cakes and wine warmed and mixed with certain spices. Sir John Froissart reckoned it a piece of great good fortune,

¹⁰² Walpole's Anecdotes of Painting, vol. 1. p. 2.

³⁰³ Froisfart, tom. 4. chap 110.

¹⁰⁴ Chaucer's Works, p. 603. col. 1.

that he had spent the greatest part of his life in the courts of princes, and mereby had an opportunity of receiving the wives, which had contributed much to his comfort and repose. The wines were sometimes giver immediately after dinner; and at the ceremosíous vifits of the great at any hour 105. The foll-wing lines contain an enumeration of some of me spices known and used in this period:

> There was ike wexing many a spice, As clowe, gilofre, and licorice, Gingiber, and grein de Paris, Canell at setewale of pris, And many a spice delitable To eten whan men rise fro table 106.

The prevailing amusements of the people of Diver-Britain of all ranks, in this period, appear to have been nearly the same with those of their ancestors in the former period, which have been already described. Some of the favourite diversions of the common people of England are mentioned in a proclamation of Edward III. A. D. 1363, and prohibited, because they prevented them from exercifing archery. "In former times the people " of our kingdom, at their hours of play, com-" monly exercised themselves in archery, from " which we derived both honour and advantage. 66 But now that art is neglected, and the people 66 fpend their time in throwing stones, wood, or iron; in playing at the hand-ball, foot-ball, or

¹⁰⁵ Froissart, tom. 2. chap. \$1.: tom. 3. chap. 59. 84.

¹⁹⁶ Chaucer's Works, p. 224. col. 2,

[&]quot; club-

" club-ball; in bull-being and cock-fighting, or " in more useless and oshonest games 107." A similar proclamation was issued two years after, in which the same games are mentioned 104 ling for a rame is described by Chauces, and seems to have been a common diversion in those times 109. A famous wrestling match, A. D. 1222, between the citizens of London on one fide, and the inhabitants of Westminister and the neighbouring country on the other, for a ram, terminated in a real battle, in which much blood was spilt, and the Londoners were put to flight 110. By dishonest games, in the proclamations of Edward III. we are probably to understand such games of chance as cross and pile, &c. to which the common people. and some of their superiors, were even then too much addicted. That weak and frivolous prince. Edward II. spent both his time and money in these trifling amusements, as appears from the following curious articles of account: "Item, Paid there to 66 Henry, the king's barber, for money which he " lent to the king to play at cross and pile, five " shillings. Item, Paid there to Pires Bernard. " usher of the king's chamber, money which he fe lent to the king, and which he lost at cross and er pile to monfieur Robert Wattewille, eight " pence ""."

Tourna .

As a general account of tournaments, the favourite diversions of the great and brave in the

²⁰⁷ Rym. Fæd. tom. 6. p. 417. ³⁰⁸ Id. p. 468.

¹⁰⁹ Chaucer's Works, p. 5. 40. 110 M. Paris, ad ann. 1222.

¹¹ Antiquarian Repertory, vol. 2. p. 58.

middle ages, hath been already given, a brief defcription of one, out of many that were celebrated in Britain in this period, will be fufficient to give the reader a distinct idea of those renowned amusements. For this purpose I shall make choice of that which was held at London in October A. D. 1389 1/2. Richard II. his three uncles, and his great barons, having heard of a famous tournament at Paris, at the entry of Isabel queen of France, resolved to hold one of equal splendour at London. in which fixty English knights, conducted to the scene of action by fixty ladies, should challenge all foreign knights. They fent heralds into all parts of England, Scotland, Germany, Italy, Flanders, Brabant, Hainault, and France, to proclaim the time, place, and other circumstances of the intended tournament, and to invite all valorous knights and squires to honour it with their presence. This (fays the historian) excited a vehement desire in the knights and squires of all these countries to go to this tournament, fome to fee the manners and equipages of the English, and others to tourney. In the mean time, the lists were prepared in Smithfield, and chambers erected around them, for the accommodation of the king, queen, princes, lords, ladies, heralds, and other spectators. the time approached, prodigious numbers of great persons of both sexes, attended by numerous retinues, arrived in London. On the first Sunday of October, which was the first day of the tournament,

112 See vol. 6. p. 368, &c.

between two and three o'clock afternoon, fixty-fine horses, with rich furniture, for the justs, issued one by one from the tower, each conducted by a squire of honour, and proceeded in a slow pace, through the streets of London to Smithfield, attended by a numerous band of trumpeters and other minstrels. Immediately after, fixty young ladies, richly dressed, riding on palfries, issued from the same place, and each lady leading a knight completely armed, by a filver chain, they proceeded flowly to the field. When they arrived there, the ladies were lifted from their palfries, and conducted to the chambers provided for them; the knights mounted their horses, and began the justs, in which they exhibited such feats of valour and dexterity as excited the admiration of the spec-When the approach of night put an end to the justs, the company repaired to the palace of the bishop of London, in St. Paul's street, where the king and queen then refided, and the fupper was prepared. The ladies, knights, and heralds, who had been appointed judges, gave one of the prizes, a crown of gold, to the earl of St. Paul, as the best performer among the foreign knights, and the other a rich girdle, adorned with gold and precious stones, to the earl of Huntington, as the best performer of the English. After a sumptuous supper, the ladies and knights spent the whole night in dancing. The tournaments, with nearly the same solemnities, were continued on Monday, Tuesday, Wednesday, Thursday, and Friday. On Saturday, the court, with all the company,

company, removed to Windsor, where the justs, feafting, and other diversions, were renewed, and lasted several days. At length, the king, having presented the foreign ladies, lords, and knights, with valuable gifts, they returned to their several countries, highly pleafed with the entertainment they had received 113. This was evidently more fplendid and more expensive than any of the diverfions of the present age. These tournaments were admirably calculated to inflame the young nobility and gentry with an ardent defire of excelling in martial exercises, as they gave them an opportunity of displaying their accomplishments in the most public manner, and thereby acquiring the applause of the great and the favour of the fair.

Dancing was a favourite diversion on all festive Dancing. occasions in this period; and persons of the highest rank and gravest characters did not disdain to mingle in the dance. It appears, from the record of the Coronation of Richard II. that after the coronation-dinner, the king, prelates, nobles, knights, and the rest of the company, spent the afternoon in dancing in Westminster-hall, to the music of the minstrels "14.

Mummeries and disguisings, the masquerades of Disguisthe middle ages, were introduced in this period. They are mentioned by Matthew Paris, in his account of the marriage of Alexander III. of Scotland, with the princess of England, at York,

¹¹³ Froisfart, tom. 4. p. 90.

^{*14} Rym. Ford. tom. 7. p. 160. col. 2.

A. D. 1252, and made commonly a part of the diversions at the great festivals in the courts of kings in those times ". In the year 1348, eighty tunics of buckram, forty-two vifors, and a great variety of other whimfical dreffes, were provided for the disguisings at court at the feast of Christmas 216. A most magnificent mummery or difguifing was exhibited by the citizens of London. A. D. 1377, for the amusement of Richard prince of Wales, in which no fewer than one hundred and thirty persons were disguised "7. A most fatal accident happened at one of these mummeries at the court of France, A. D. 1388. Charles VI. who was then young and frolickfome, and five young noblemen, appeared like favage men, clothed in robes of linen, exactly fitted to their bodies, covered from head to foot with a reprefentation of long hair, made of linen threads fixed to their linen robes with pitch. A flambeaux accidentally fet fire to the counterfeit hair of one of these seeming favages, and in a moment, five of them, who were near each other, were all in flames. Four of them were burnt to death, and the fifth preserved his life by throwing himself into a large veffel full of water, which happened to be near: the king was faved by being fortunately at a little distance 118. At these great festivals, the whole company fometimes wore masks;

¹¹⁸ Froissart, tom. 4. ch. 52.

and on these occasions no great regard, it is said, was paid to decency "9.

Pageants, at the triumphant entries of princes Pageants. into their capitals, were not unknown in this period. The citizens of London expended greatfums on pageants, as well as in presents, at the public entry of Richard II. and his queen, A. D. 1302 120. Those exhibited at Paris, at the entry of Isabel of Bavaria, queen to Charles VI. were numerous and magnificent, but strongly tinctured with the gross superstition of the age. queen approached the gate of St. Dennis in her litter, she beheld a representation of heaven, with clouds and stars, and many children, in imitation of angels, finging most melodiously, and in the midst of them an image of the Virgin Mary, with the infant in her arms, playing with a little mill made of a large nut. At the next gate she beheld another heaven, more glorious than the first, in which were many angels finging, and an image of God the Father, Son, and Holy Ghost, sitting in Majesty on his throne. When she came near the gate two angels descended and placed a crown of gold, adorned with precious stones, upon her head, and then ascended, singing certain verses in her praise 121.

At grand festivals, the palaces of princes, and Multitude the castles of great barons, were crowded with fixels, &c. hundreds of minstrels, mimicks, jugglers, tum-

HISTORY OF BRITAIN. Book IV.

blers, rope-dancers, &c. who exhibited, in their different ways, for the amusement of the company. Some of their exhibitions were abundantly ridiculous. At one time, for example, a horse danced upon a rope, and two oxen rode upon horses, and sounded trumpets 122.

Sports of the field.

The fondness of princes, nobles, and gentlemen, for the fports of the field, was as great in this as it had been in the former period. These sports were the chief joy and business of their lives; horses, hounds, and hawks, were the favourite topics of their conversation; and some of them, we are told, kept no fewer than fixteen hundred dogs for the chace 123. A royal hunting was as splendid, and almost as expensive, as a royal tournament. When the kings of France, Scotland, and Cyprus, were in England, A.D. 1363, Edward III. proclaimed a royal hunting, to which he invited those kings, all the French hostages, and all his own nobility. If we reflect on the number and quality of the persons invited, the greatness of their retinues, and their fondness of this kind of sport, we may form some idea of the magnificence of this hunting. The scenes of this famous sport were, the forests of Rogyngan, Clyne, Schyrewood, and feveral other forests, woods, and chaces, from which we may conclude, that it continued a confiderable time 124. Wolves were not extirpated out of England fo early as is commonly believed. This

···· appears

¹²² Memoires sur Chevalerie, tom. 1. p. 247. M. Paris, an. 1236.

appears from a commission granted by Edward I. A. D. 1281, to his faithful and well-beloved servant Peter Corbet, to hunt and destroy all the wolves he could find in the counties of Gloucester, Worcester, Hereford, Salop, and Stafford 125.

There is fufficient evidence, that certain amusements or sports, which are called by the historians

of those times theatrical, were known and admired in this period. The monk of Malmsbury, who wrote the life of Edward II. acquaints us, that Walter Reynolds, made archbishop of Canterbury. A. D. 1214, was not a man of much learning; but that he had gained the favour of the king by his great skill in theatrical plays, of which he was superintendent 126. But those theatrical exhibitions were probably no other than the awkward representations of scripture-histories, which were called mysteries and miracles, and have been already described 127. These mysteries were originally a kind of religious, or rather superstitious ceremonies, exhibited in monasteries and churches, by the

monks and clergy; but they afterwards became also secular amusements, and were acted by the laity. The most interesting historical passages, both of the Old and New Testament, were represented, at Chester, A. D. 1327, at the expence of the different incorporated companies of that city, and probably by the members of these companies

Theatrical diverfions

¹²⁵ Rym. Fæd. tom. 2. p. 168.

¹²⁶ Monach, Malmf. Vit. Ed. II. p. 142.

¹²⁷ See vol. 6. p. 374.

and their fervants. In the mystery of the creation, which was acted by the drapers, the persons who represented Adam and Eve appeared quite naked, without blushing themselves, or giving any offence to the spectators 128. The mystery of the deluge, which was acted by the dyers, contained a violent altercation between Noah and his wife, who absolutely resused to enter the ark; and when she was forced into it, gave her husband a hearty blow on the ear 129. Moralities were a kind of interludes, in which the virtues and vices, the human faculties and passions, &c. were personisied, and speeches formed for them, illustrating and recommending a certain moral.

Tragedies and comedies. The words comedy and tragedy occur in some of the authors of this period: but it plainly appears, that by comedies they meant only pleasant facetious stories, calculated to produce laughter; and by tragedies, tales of woe, adapted to excite terror, grief, and pity. Many of Chaucer's Canterbury Tales are in the facetious strain, and are therefore called comedies; some of them are mournful stories, and are called tragedies. He gives this last name to his poem of Troilus and Creside:

Go, litil boke, go, litil tragedie, There God my makir yet er that I die, So sende me might to make some comedie 110.

Tragedy is thus described by Chaucer's monk in the prologue to his tale:

¹²⁸ Warton, Hist. Poet. vol. 1. p. 243.

¹²⁹ Id. vol. 2. p. 179. 130 Chaucer's Works, p. 332.

Tragidy is to tell a certaine story,
As olde bokis makin ofte memory,
Of 'hem that stode in grete prosperity,
And be fallin out of ther hie degre
In to misery, and endid wretchedly;
And thei ben versifyid comenly,
Of sixe sete, whiche men elepen hexametron;
In prose eke ben enditid many one,
And in metre, many a sondry wise,
Lo! this ought enough you for to suffice 131.

The monk proposed to tell a few tragedies, of which he had one hundred in his cell; and his tale accordingly consists of seventeen short stories of persons who had fallen from great prosperity into great adversity.

Tragetours, as they were then called, or juglers, contributed to the amusement of those who could afford to pay them for their exhibitions, which tended to excite surprise and admiration, by certain tricks and appearances which imposed upon the senses of the spectators. Several of these exhibitions are described by Chaucer, of which it will be sufficient to produce one example:

Tragetours or jugglers.

For I am fikir there be sciences,
By whiche men make divers aparences,
Soche as these sotill tragetores plaie;
For oft at session have I well herd saie,
That tragitors within an halle large,
Have made to come in water and a barge,
And in the halle rowin up and down;
Somtime hath semid come a grim lioun;

And somtime flouris spring as in a mede; Somtime a vine, and grapis white and rede; Somtime a castill alle of lime and stone, And whan 'hem likid voidin 'hem anon; Thus semid it to every mann'is sight 134.

Games of chance.

Games of chance appear to have been nearly the same in this and the preceding period, and to have been pursued with equal ardour in both. Cards, which have long been the chief instruments of gaming, both for gain and for amusement, were invented towards the conclusion of the sourteenth century, by Jaquemin Gringonneur, a painter in Paris; but as I have met with no evidence that they were used in Britain before the end of our present period, their history must be referred to the seventh chapter of the fifth book of this work. 133.

NUMBER II.

Translation of the Great Charter of King Henry III.

granted November 12th, A.D. 1216, in the first Year of his Reign.

HENRY, by the grace of God, King of England, Lord of Ireland, duke of Normandy and Aquitaine, and Earl of Anjou, to all his archbishops, bishops, abbots, earls, barons, justiciaries, foresters, sheriffs, commanders, officers, bailiffs, and all his faithful subjects, wisheth health. Know ye, that we, from our regard to God, and for the salvation of our own soul, and

and of the fouls of all our ancestors and successors, to the honour of God, and the exaltation of holy church, and amendment of our kingdom, by the advice of our venerable fathers, Gualo, cardinal presbyter, by the title of St. Martin's, legate of the apostolic see, Peter of Winchefter, R. of St. Asaph, J. of Bath and Glastonbury, S. of Exeter, R. of Chichester, W. of Coventry, B. of Rochester, H. of Landass, - of St. David's, - of Bangor, and S. of Worcester, bishops; and of these noblemen, William Marischal earl of Pembroke, Ralph earl of Chester, William de Ferrars earl of Derby, William earl of Albemarle, Hubert de Burgh, our chief justiciary, Savary de Meauleone, William Brigwere the father. William Brigwere the son, Robert de Courtenay, Fawks de Breante, Reginald de Vautort, Walter de Lasey, Hugh Mortimere, John de Monmouth, Walter Beauchamp, Walter Clifford, Robert Mortimer, William de Cantelupe, Matthew Fitz-herbert, John Marischal, Allan Basser, Philip de Albiniaco, John Stranger, and others of our faithful subjects, have granted to God, and by this our present charter, have confirmed, for us, and our heirs for ever: First, That the church of England shall be free, and shall have her whole rights entire, and her liberties inviolated .- We have also granted to all the free men of our kingdom, all the underwritten liberties, to be enjoyed and held for ever by them and their heirs, of us and our heirs. - If any of our earls, or barons, or others, who hold of us in chief by military service, shall die, and at his death his heir shall be of full age, and shall owe a relief, he shall have his inheritance for the ancient relief, viz. the heir or heirs of an earl, a whole earl's barony, for one hundred pounds; the heir or heirs of a baron, a whole barony, for one hundred pounds; the heir or heirs of a knight, a whole knight's fee, for one hundred shillings at most; and he who owes less shall give less, according to the ancient custom of fees. But

But if the heirs of any such be under age, his lord shall No. II. not have the custody of his land till he hath accepted his homage; and after such an heir hath been in wardship, when he hath attained the age of one and twenty, he shall have his inheritance, without relief, and without fine, but fo, that though he shall be made a knight while he is under age, his land shall remain in the custody of his lord till the aforesaid term. - The warden of the lands of fuch an heir who is under age, shall not take of the lands of that heir any but reasonable issues, and reasonable customs, and reasonable services; and that without destruction or waste of the men or goods: and if we commit the custody of any such land to a sheriff, who is bound to answer to us for the issues of them, and he shall make destruction or waste upon the lands in his custody, we will recover damages from him, and the lands shall be committed to two legal and discreet men of that fee, who shall answer for the issues to us, or to him to whom we have affigned them; and if we shall have granted or fold to any one the custody of any such lands, and he shall have made destruction or waste, he shall lose the custody, and it shall be committed to two legal and discreet men of that fee, who shall answer to us as aforesaid. ---- Besides, the warden, as long as he hath the custody of the lands, shall keep in order the houses, parks, warrens, ponds, mills, and other things belonging to them, out of their issues; and shall deliver to the heir, when he is at age, his whole lands, provided with ploughs, and all other things, at least as well as when he received them. these rules shall be observed in the custody of archbishoprics, bishoprics, abbacies, priories, and vacant ecclesiastical dignities, except that the custody of such shall not be fold. -Heirs shall be married without disparagement.-A widow, after the death of her husband, shall, imme-

diately and without difficulty, have her marriage-goods and her inheritance; nor shall she pay any thing for her

dower.

No, 11°

dower, or her marriage-goods, or her inheritance, which her husband and she had on the day of his death: and she may remain forty days in her husband's house after his death, within which time her dower shall be assigned her, if it had not been affigned before, unless that house be a castle; and if she remove from the castle, a competent house shall immediately be provided for her, in which she may live decently, until her dower shall be assigned her, as aforesaid.—No widow shall be compelled to marry while she chuses to live without a husband; but so that she shall give security that she will not marry without our consent, if she holds of us, or without the consent of her lord, if she holds of another.—Neither we nor our bailiffs shall seize any land or rent for any debt, while the chattels of the debtor are fufficient for the payment of the debt, and the debtor is willing to pay it; nor shall the fureties of the debtor be distrained while the principal debtor is able to pay the debt; and if the principal debtor fail in the payment of the debt, not being able to pay it, or not willing when he is able, the furcties shall answer for the debt; and if they please they shall have the lands and rents of the debtor, until fatisfaction be made to them for the debt which they had before paid for him, unless the principal debtor can shew that he is discharged from it by the faid fureties.—The city of London shall have all its ancient liberties and free customs. We also will and grant, that all other cities, burghs, and towns, the barons of the cinque ports, and all other ports, shall have all their liberties and free customs. - Let no man be compelled to do more service for a knight's fee, or for any other free tenement, than what is due from thence.-Common pleas shall not follow our court, but be held in some certain place.—Assizes of mortdancester, novel disseisin, and darrein presentment, shall not be taken but in their own counties, and in this manner.-We, or, if we are out of the kingdom, our chief justiciary, shall fend Vol. VIII. F f

No. II. two justiciaries into each county, four times a year, who, with four knights of each county, chosen by the county, shall take the foresaid assizes, within the county, at the time and place of the county-court. And if the fore-14 faid assizes cannot be taken on the day of the county-court, let as many knights and freeholders, of those who were present at the county-court, remain as may be sufficient to take these assizes, according to their importance. A freeman shall not be amerced for a small offence, but 15 only according to the degree of the offence; and for a greater delinquency, according to the magnitude of the delinquency, faving his freehold; a merchant in the fame manner, faving his merchandise; and a villain, saving his implements of husbandry.—If they fall into our mercy, none of the foresaid amerciaments shall be affested but by 16 honest men of the vicinage. Earls and barons shall not be amerced but by their peers, and that only according to the degree of their delinquency. --- No clerk shall be 17 amerced but according to the form aforefaid, and not according to the quantity of his ecclefiaftical benefice. Neither a town nor a particular person shall be compelled 18 to build bridges over rivers, except those who anciently and of right are bound to do it. --- No sheriffs, com-19 manders of castles, coroners or other bailiffs of ours, shall hold pleas of our crown. --- If any one holding of 20 us a lay fee dies, and our fheriff or bailiff shall shew our letters patent of fummons for a debt which the defunct owed to us, it shall be lawful for our sherisf or bailiff to attach and register the chattels, found on that fee et the fight of lawful men, so that nothing shall be removed. from thence until our debt which is clearly due to us is paid; and the residue shall be left to the executors, to fulfil the last-will of the defunct; and if nothing shall be owing to us by him, let all the chattels fall to the defunct, faving to his wife and children their reasonable shares.

-No commander of castle, or his bailiff, shall take

the

the corns or goods of any one who doth not belong to the town where his castle is, without immediately paying money for them, unless he can obtain a respite with the free confent of the feller; but if he do not belong to that town, he shall be obliged to pay the price within three weeks, ---- No commander of castle shall compel any knight to give money for castle-guard, if he is willing to perform it in his own perfon, or by another sufficient man, if he cannot perform it himself, for a reasonable cause; and if we shall have carried or sent him into the army, he shall be free from castle-guard, according to the space of time he shall have been in the army by our command.—No sheriff or bailiff of ours, or of another, shall take the horses or carts of any one to perform carsiage, unless he pay the price anciently fixed by the statute, viz. for a cart with two horses ten pence a-day, and for a cart with three horses sourteen pence a-day.-Neither we nor our bailiff shall take another man's wood for our castles, or other tises, without the consent of him to whom the wood belongs. --- We shall not retain the lands of those who have been convicted of felony, longer than one year and one day, and then they shall be given up to the lord of the fee. ---- All wears for the future shall be quite removed out of the Thames, the Medway, and through all England, except on the sea-coast. - The writ which is called precipe, for the future, shall not be granted to any one, concerning any tenement, by which a freeman may lose his court.—There shall be one measure of wine through all our kingdom, and one meafure of ale, and one measure of corn, viz. the quarter of London; and one breadth of dyed cloth, and of ruffets, and of halberjects, viz. two ells within the lifts. shall be the same with weights as with measures. --- Nothing shall be given, for the future, for the writ of inquisition of life and limb; but it shall be given gratis, and not denied. --- If any-hold of us by tee-farm, or Ff2 foccage,

No. II. foccage, or burgage, and holds an estate of another by military service, we shall not have the custody of the heir, or of his land, which is of the fee of another, on account of that fee-farm, or foccage, or burgage; nor shall we have the custody of that fee-farm, foccage, or burgage land, unless it owes military service. We shall not have the custody of the heir or of the land of any one, which he holds of another, by military service, on account of any petty fergeantry, which he holds of us, by the fervice of giving us knives or arrows, or the like. --- No 31 bailiff, for the future, shall put any man to his law, upon a verbal complaint, without credible witnesses produced to that effect. --- No freeman shall be seized or impri-32 foned, or diffeifed, or outlawed, or banished, or in any other way destroyed, nor will we go upon him, nor will we fend upon him, except by the legal judgment of his peers, or by the law of the land a. To none will we 33 fell, to none will we deny, to none will we delay right and justice. All merchants, unless they have been 34 before publicly prohibited, shall be sase and secure, in going out of England, coming into England, staying in and travelling through England, as well by land as by water, to buy and to fell, without any unjust exactions, according to ancient and right customs, except in time of war; and if they belong to a country at war with us; and if such are found in our territories at the beginning of a war, let them be apprehended without injury of their bodies or goods, until it be known to us, or to our chief justiciary, how the merchants of our country are treated who are found then in the country at war with us; and if ours are not molested there, the other shall not be molested in our dominions. --- If any one holdeth -35

which are in our hands, and are baronies, and he shall No. II. die, his heir shall not pay any other relief, or do any other service to us, than he would have done to the baron, if the lands had been in the hands of the baron; and we shall hold it in the same manner that the baron held it. -Men, who refide without a forest, shall not, for the future, come before our justices of the forest, on a common fummons, unless they be parties in a plea, or fureties for some person or persons attached for the forest. -All barons who have founded abbies, of which they have charters from the kings of England, or ancient tenures, shall have the custody of them when they are vacant, as of right they ought to have, and as it is declared above. All forests which were made in the time of king John, our father, shall be immediately difforested: the same shall be done with rivers which were appropriated by the fame king John in his time, --- No man shall be apprehended on the appeal of a woman for the murder of any other than her husband. --- If king John, our father, disseised or dispossessed any Welshmen of their lands, liberties, or other things, without a lawful trial by their peers, in England or in Wales, let them. be immediately restored to them; and if any dispute shall arise about it, then let it be determined in the marches, by the judgment of their peers, if the tenement be in England, according to the law of England; if in Wales, according to the law of Wales; if in the marches, according to the law of the marches. The Welfh shall do the same to us and our subjects.—All the above customs and liberties which we have granted in our kingdom, to be warranted by us to our people, shall be obferved by all our subjects, both clergy and laity, towards those that hold of them. --- But because some chapters contained in the former charter, seemed of great importance, and of a doubtful nature, viz. of the manner of affesting scutages and aids,—of the debts of Ff3 the

No. II.

the Jews and others, -- of the liberty of going out of the kingdom and returning into it, -of forests and foresters, warrens and warreners, of the customs of counties, -of rivers and their keepers, it feemed good to the aforesaid prelates and nobles, that these should be suspended till further deliberation be had, and then we shall do, in the most ample manner, concerning these, and all other: things which may occur to be amended, what may tendto the common benefit of all, and to the peace and profperity of us and our kingdom. But because we have not yet a great feal of our own, we have commanded this prefent charter to be fealed with the feals of our venerable father lord Gualo cardinal preflyter, by the title of St. Martin, and legate of the Apostolic see, and of William Marischal earl of Pembroke, governor of us and of our kingdom, all the before named, and many others, being witnesses. Given by the hands of the aforesaid lord legate and William Marischal earl of Pembroke, at Bristol, the twelfth day of November, in the first year of our reign.
